Among the curiosities carried off by our author was the shoulder-blade of a cow which he found hanging inside a shop, and which had been used for writing down memoranda—an Arabic practice only recently superseded by the use of slates. All the older people in the mountains, from Galicia to the Basque provinces, had learned to do their sums upon such *huesas* (a word specially coined from *hueso*, bone). Mediæval also, or rather Oriental, was the custom Mr. Gadow found prevalent in the schools of teaching children their lessons by making them repeat sentences over and over again in chorus until the sound (though perhaps not the sense) had become familiar to them. Postal affairs, again, he found in a more primitive condition than even in the cities of southern Spain. A letter addressed to John Smith, Esq., is quite as apt to be put in the pigeon-hole marked J. or E. as that marked S.; so Smith has one chance in three of getting his letter when he asks for it. Once, at Potes, the author came across a letter addressed to a gentleman living in a town near Santander. He asked why it had not been sent to that place, to which it was addressed. The answer was, "That man is a *compatriota* of yours, a foreigner, at least, is he not? Well, numbers of strangers come to Potes, and he is as likely to turn up here as at Cabezon." Even at San Sebastian, Mr. Gadow was once compelled to seek the assistance of the consul to compel the postmaster to disgorge a letter for him which he knew must be there.

On the other hand, these primitive mountaineers have learned the use of modern dynamite to help them fell their hard gnarled trees which it takes days to bring down with an axe. The Government, in view of recent anarchist plots, has forbidden the sale of dynamite, and in the cities it would be dangerous to ask for it; but in the country you can get as much as you please. The men carry the cartridges about in their pockets, and one day Mr. Gadow was horrified to find that his muleteer had secreted two of the red sausage-like sticks in his (the master's) saddle-bags! In one respect these Spanish peasants were even found to be ahead of the rest of the world. They have learned to make cocks hatch eggs and look after the chickens, while the hen, being at liberty, can and does lay more eggs than she would if hampered by her maternal duties. The trick is performed in this way: They carefully pluck the feathers off the rooster's under-side, and the bare skin is then irritated with nettles until inflammation sets in. The cock soon finds that the pain caused by this cruel process is mitigated by warmth and softness, and this makes him willing and eager, although for purely selfish reasons, to hatch a brood and let the little chicks sit under him. It is even said that he emits the hen's clucking sound, but this *on dit* was not verified by the author.

Spain, like California, is in the popular mind associated chiefly with oranges and other products of warm climates; but, like California, it has every possible variety of climate and scenery. Who has ever heard of the Deva pass? Mr. Gadow says of it: "There is not a pass anywhere else in Europe to which this one yields the palm in grandeur and extent. Certain valleys in Norway . . . are flanked by higher mountains, and others in Switzerland are perhaps as grand, but here we have a pass about thirteen miles in length, every few yards of which bring new surprises of never-flagging sublimity." On the range near Oviedo, he says, "in the previous winter snow fell in such masses that it reached to the roofs, and the people were obliged to dig tunnels from their doors into the roads." In such regions the chamois are apt to be at home; our author repeatedly hunted them, and his experiences, graphically related, will interest sportsmen. The beaters demand only forty cents a day and find their own food. But not all these mountaineers are so modest in their demands. One day Mr. Gadow gave a boy a copper for catching some insects. The next day a maiden, who looked like a milliner, came in with a whole bandbox full of beetles, grasshoppers, and flies. To get rid of her he offered her a peseta (sixteen cents), but she flared up and wanted at least a dollar. "There are so and so many *bichos* in the box; you gave twenty centimos to my brother for less than one dozen; this makes one duro, and that without the box." When he told her to take her box and insects away, she grew vicious and wanted to be paid at least for the insects that had escaped into the room!

The natives of this part of Spain are by no means as polite as they are in the south. In Andalusia, an attempt to browbeat or to rebuke would be fatal—politeness alone makes an impression there; whereas "our sad experience has taught us that if you want anything at all from a Galician, be he a miserable shopkeeper in the Sierras, or be he agent of a line of transatlantic steamers, you must 'go for him' from the beginning; make yourself as disagreeable as possible." But these are not true Spaniards; their language, at least, is more like Portuguese than like Castilian. With all their rude manners, the humblest of the mountain peasants are apt to be very sensitive in regard to a supposed slight. One day, noticing that his beaters had only bread and cheese with them, the author cut his piece of ham in two and with a "Catch!" threw it over. "Neither of them caught it. They only looked astonished, and, with a bitter smile, one of them remarked, 'As at a dog!'" The Spanish language, with its charming diminutives, lends itself admirably to fine distinctions in the matter of etiquette and address—a reproach, for instance. To call a man a *burro*, a donkey, plain and simple,

would be resented as an insult. *Burrico*, or little donkey, is comparatively inoffensive; but to convert the thing into pleasant chaff, you must call him *un gran burrico*, a big little donkey. Another advantage of the Spanish language is pointed out on p. 67:

"It is wonderful how well the Spanish language is suited for shouting and for communication across enormous distances. Many a time have we beheld two natives asking for and receiving information at a distance which would effectually bar any understanding in English, German, or other eminently consonantal idiom. *Anda á la derecha* is bound to carry further than 'Go to the right.'"

Something might be said for plantation long-distance English in the mouths of the Southern blacks.

Mr. Gadow had his kodak with him, and his volume is illustrated with ninety pictures. The appendix contains over fifty pages of valuable notes on the fauna and flora of northern Spain; but why an author who otherwise shows such good taste should have padded his volume needlessly with a forty-page condensed history of Spain, passes comprehension.

Varia. By Agnes Repplier. Houghton, Mifflin & Co. 1897.

Two essays out of the nine included in this collection—"Little Pharisees in Fiction" and "From the Reader's Standpoint"—have already had a month's immortality in the magazines, and are here reprinted with their fellows. The latter essay insists on the obvious right of the reader to choose what he shall read, and of the writer what he shall write, in spite of Mr. Hamlin Garland and the critics. We have met with the same contention in much the same language in an earlier volume of Miss Repplier's essays, entitled 'Our Friends, the Books.'

The touch of Miss Repplier's hand is as light as ever, her sparkling gayety has its wonted edge, her method of composition has not changed. It is in respect of this last that she chiefly fails to live up to her nickname, "Little Miss Lang." Amiable flippancy, light-hearted irresponsibility, and a neat gift of expression she certainly has in common with the author of 'Essays in Little.' But Andrew Lang's fine carelessness of manner is as a glove under which you feel the hard metal of solid classical attainments—the scholarship that shows itself in the turn of a phrase, a half-quotation, an allusion that may be wholly lost on the uninitiated reader. It is the secret of Andrew Lang's irritating charm. The results of Miss Repplier's great literary industry lie on the surface. You can—and what is worse, you must—track out step by step the special course of reading pursued for each essay. For Miss Repplier, essay-writing is still an entertaining little game, in which you take a score or so of quotations from authors too little read, and, having shuffled them, stop the gaps with sparkling comment of your own. Miss Repplier manages the transitions with considerable skill, but the skill is too obvious to be art. The general effect of such an array of authorities is of all sail and no anchor. Yet we are convinced that Miss Repplier has chosen the literary type that best "sets her genius." It is a sad pity that one whom Nature cut out for an essayist should spoil herself in the making. There is a well-invented story of Pindar which we commend to Miss Repplier. Korinna the poetess had reproved him for neglecting to use myths in his odes. Pindar took the hint, and his next poem fairly bristled with mythology. Whereupon Korinna said, with a smile, "One should sow with the hand and not with the whole sack."

It is perhaps because it is necessarily free from quotations bearing the label of Dr. Johnson or the Ettrick Shepherd that the essay entitled "The Fête de Gayant" is one of the most pleasing of the nine. In this tale of Miss Repplier's experiences of French towns, and especially the town of Douai, *en fête*, there is such charming humor that one can almost forgive that slipshod use of the present tense in narrative which is one of the mint-marks of a lady's composition. "Old Wine and New" is a spirited defence of the infusion of "mere literature" into history in defiance of Prof. Seeley's warning to historians to keep to "blue-books and other statistics." In "The Deathless Diary," Miss Repplier, in the course of copious quotations from diary-keepers ranging from Pepys and John Evelyn to Maurice de Guérin, thus apostrophizes "those who hunger and thirst after the glories of the printed page":

"O writers of dull verse and duller prose, quit the well-worked field of fiction, the arid waste of sonnets and sad poems, and chronicle in little leather-covered books the incidents which tell their wondrous tale of resistless and inevitable change. Write of electric motors, of bicycles, of peace societies, of hospitals for pussy-cats, of women's clubs and colleges, of the price of food and house rent, of hotel bills, of new fashions in dress and furniture, of gay dinners, of extension lectures, of municipal corruption and reform. . . . These things do not interest us profoundly now, being part of our daily surroundings; but the generations that are to come will read of them with mingled envy and derision—envy because we have done so little, derision because we think we have done so much" (p. 47).

This excellent advice would be well timed if there were the smallest chance that the writers thus exhorted would recognize themselves in Miss Repplier's category of "those who have nothing to say which anybody wants to listen to now."

"The Eternal Feminine" is a carefully supported refutation of the popular fallacy that the "new woman" has innovated on her great-grandmother. We are not sure that the "new woman" will feel flattered by the implication that, like other paradoxes of this generation, she will become a platitude of the next, but Miss Repplier's evidence certainly goes to show that the misunderstood pioneers of female progress need only wait for two or three generations to become proverbs for domestic industry and true womanliness. Miss Repplier's English is terse and epigrammatic as usual, but she should remember that colloquialism is a dangerous instrument to play with. Imagine Andrew Lang's using such a phrase as "By the time I got that far back" (p. 186)! A loose construction of which Miss Repplier is too fond is illustrated by "So old we shall have mastered" (p. 185). In "Lady Somerset" (p. 131) we imagine that we meet Lady Henry Somerset in her customary American disguise.

The Italians of To-Day. From the French of René Bazin. Translated by William Marchant. Henry Holt & Co. 1897.

This book is not, as the title suggests, a complete study of contemporary Italians. It is just a group of sketches and notes of travel by an exceptionally clever observer; yet in its own class it is quite an ideal book for cultivated readers whose tastes are not particularly specialized. It contains four short articles, various in character and treatment, on North Italy, Rome and the Campagna, Naples, and a "corner of Sicily"—this last mainly an account of an expedition to Ætna in eruption.

Mr. Bazin writes in an easy, simple, offhand style, with a Parisian's true sense of measure, and never fails to be interesting. There is not a dull page in the whole book. With perfect tact the author passes from description to dialogue, from dialogue to statistics, from statistics to personal observation and acute comment, never dwelling on any point so long as to weary the reader, yet never giving the impression of frivolity. Kindly sympathy, rare freedom from prejudice, good judgment in the choice of subjects, are joined to a catholic interest in everything worthy of an educated curiosity. In the north of Italy he discusses literature and politics; in Rome he inquires into the history of the recent financial disasters and the ancient problem of the Roman Campagna; Naples suggests to him the appropriate subjects of pauperism and the "jettatura," while the south of Italy brings up the difficult question of underpaid labor and consequent emigration. His fairness and readiness to hear both sides of every question, and his patience in unearthing valuable information, are everywhere conspicuous, while his powers of observation, and his delicacy in speaking of those Italians from whom or about whom he learned so much, are worthy of all praise.

His own comments and reflections would lose too much by being quoted apart from the mass of facts upon which they are based; but their judiciousness may be judged of by the following on Italy's army and navy expenditures. "An armed Italy," says the author, "an Italy which exhausts itself in armaments, is far from being of no account; but an Italy frugal and careful would be a formidable Power." We must allow ourselves also to give one specimen of Mr. Bazin's humor. One of the great landowners of the Roman Campagna has been talking to him at a fashionable club, after a drive in that dangerous region, and assuring him that there has been great exaggeration as to the malaria. The author continues: "He stopped just here, without considering the connection of ideas. 'Garçon,' he cried, 'a glass of vermouth and some quinine! and, waiter! a good deal of quinine!'"

Mr. Bazin is not always impeccably accurate. When, for example, he tells us (p. 61) that "open any secular journal, the least religious possible, and you will see in the almanac [read 'calendar'] of the day, 'Ave Maria, Morning 5h. 15, Ave Maria, Evening, 5h. 22,'" he is falsely generalizing for all Italy from what he saw in one district, and that, too, in ignorance of the fact that what he quotes as an evidence of religiousness is merely an indirect way of announcing the hours of sunrise and sunset somewhere about the middle of March. More curious than such slips as this is the great multitude of blunders in the relatively little Italian quoted or used. This might well give a reader pause, were it not that French is so universally spoken in Italy as to make it possible for a traveller to know the country fair-

ly well without being proficient in Italian. Here is a list, with corrections in brackets, for the use of readers who may not be Italian scholars. P. 11, *mama* (*mamma*); p. 18, *spirito* (the verse requires *spirto*); p. 20, Teatro *dal* (*del*) Verme; p. 36, Palazzo *della Consiglia* (*del Consiglio*, but the proper name of that palace in Vicenza is "la Basilica Palladiana"); p. 47, *junta di vigilenza* (*giunta di vigilanza*); p. 53, *paese voldostani* (*poesie Valdostane*); p. 117, *vicotta* (*ricotta*); p. 133, *bonefica* (*bonifica*); p. 183, *passegiata* (*passeggiata*); pp. 185, 191, 194, *resanimento* (*risanamento*); p. 188, *brasero* (*braciere*); p. 189, *donne di male affari* (*mal'affari*); p. 197, *lustroscarpe* (*lustrascarpe*); p. 204, *innomabile* (*innominabile*); p. 215, *bracciani* (*braccianti*). On p. 172, in "Fa la spia, ma fala bene," the form *fala* may be dialectic for the Tuscan *falla;* but the translation, instead of "She plays the spy, but plays it well," should be, "Play the spy, but play it well"—which proverbial saying is one of several curious phrase-names quoted as given by the herdsmen of the Campagna to the buffalo cows and their calves. On page 220, "tempo di Sicila (Sicilia), tempo femineo" means not "woman's weather," but "feminine weather," in allusion to the "mutabile semper femina." On p. 205 Matilda Serao is called Mathilda Serrao, though the name is properly given in other places.

The translator and the printers must share the responsibility for *Solférino* (*Solferino*), p. 20, 66; *Rudini* (*Rudinì*), p. 26; *Messenian* (for a native of Messina), p. 72; *consomme* (*consommé*), *Catana* (*Catania*), p. 228; *Fortune* (for the proper name *Fortuné*), and a few other obvious misprints. The translation is in the main remarkably good, though we have met with a few lapses. Thus, on p. 33, 4,350,000 tons of *charcoal* should, of course, be *pit-coal;* and p. 183, where the vines are said to "run over the ground on green and red arches," we should read "in" (French "*en*") for "on"; the vines themselves making the arches with their leaves and fruit. On p. 187 "a slice of *infected* air" should be merely "evil-smelling" or "malodorous" air—that being the ordinary meaning of the French word *infect*. Mr. Marchant misuses the rare and technical word "quiritarian" in the sense of "belonging to the Quirites," and falls into the common error of making Italians use "Signor" (not followed by a proper name) instead of "Signore," which alone is correct as a form of address. The book has a sufficient index and will well repay a perusal.

The Scholar and the State, and Other Orations and Addresses. By Henry Codman Potter, D.D., LL.D., Bishop of New York. The Century Co. 1897.

Bishop Potter modestly tells us that the publication of this volume was not due to any suggestion of his; but he need not feel that such a suggestion would have been presumptuous. The papers have all a strong, clear tone that will be everywhere welcome and helpful. They are addressed in some cases to the clergy, but in the main they appeal to all conscientious citizens, and their burden is the increasing importance of our public duties. Such appeals are easily made in general terms, in which case they are equally inoffensive and ineffective. To frame them so that particular acts shall be advised without arousing party spirit, is a difficult task; but Bishop Potter knows how to be outspoken without being arrogant, and how to be earnest and tactful at the same time.

"There are two dangers to which religious teachers, or those holding ecclesiastical office, are liable," Bishop Potter observes in his preface. One is a danger of omission, the other of commission. Some of the clergy abstain from all active intervention in the secular life of the community; others obtrude themselves in such a way as to seem to forget that, "in its highest aspect, the Kingdom of their Master is not of this world." Educated men in general are prone to sin in the former way, and perhaps the second error is often a sign of a lack of culture. But there is a middle course, well described by Bishop Potter in the paper entitled "The Scholar and the State," which is not so impracticable, perhaps, as our educated class is inclined to suppose. We may call it the elevation of public opinion by constant appeals to lofty motives. Men are so constituted as to approve virtues that they cannot bring themselves to practise, and the power of the most successful unprincipled politicians may be undermined by the steady influence of purer standards. It is slow work to educate a whole people, but we have the work to do, and such exhortations as Bishop Potter's should cheer the faint-hearted.

Siam on the Meinam. By Maxwell Sommerville. Philadelphia: Lippincott. 1897.

We judge from the preface of the above work that the writer intended it to be "a popular notice" for the use of travellers in Siam. With obvious lack of sympathy for this idea, the publishers have given us a volume with such heavy paper and binding that it is a weariness to the hands, and would increase the charge for overweight in a trunk, but it would look well as a "gift book" on the parlor table, where its pretty yellow covers would not show the dust. Those who read it through will find that they can do so in a few hours. The larger half of the book consists of a hasty description of what the author saw in Bangkok and farther up the river; there are nine pages on the hotel, a page and a half on the museum, and so on; then follows a chapter on Buddhism, and then three stories "as an original means of illustrating phases in Siamese life and customs combined with the history of the Meinam and of the people of the northern province." The first and only important one of these, where the scene is laid in the seventeenth century, is illustrated by photographs (!) of the principal characters. The other two together do not fill ten largely printed pages or illustrate anything at all.

As for the style, though occasionally vivid, it is stilted and irritating, besides being confused and at times ungrammatical. We should not have expected, at the present day, a professor in a well-known Northern university to speak of a theatre as "a temple, where, through Thespian sources, men are trying to obtain all the enjoyment possible." Is it to show that he knows the French words for library and umbrella that Prof. Sommerville inserts them in a work on Siam? If his largest dictionary gives him authority for "consentaneity," "inquietude," "he was desolate," and "her potential parents," is that why he puts them in his "popular notice"? Finally, we must protest against the taste which inserts in such a book two photographs of a "dead body being eaten by vultures"; the second, particularly, is disgusting.

Some Colonial Homesteads

And Their Stories. By MARION HARLAND. With 86 Illustrations. 8vo, gilt top, $3.00.

The author of "Some Colonial Homesteads and Their Stories" has studied patiently and lovingly the traditions and historical associations that cluster about the old family estates founded by notable colonists of the original thirteen States. How rich and varied is this lore none can comprehend who have not, like her, visited the storied homes in person and had access to the family archives of each. Every house has its romance. The loves, the feuds, the tempers, the sports, and the tragedies revealed by such research are here interwoven with descriptions of the houses as we may see them to-day, and faithful pen-pictures of the worthies who built and lived in them when the history of our country was in making.

The book is charmingly written, and is embellished by a large number of illustrations, very carefully selected and engraved. Among the homesteads presented are: Brandon, Westover, Shirley, Marshall House, Cliveden (Chew House), Morris House, Van Cortlandt Manor House, Oak Hill (The Home of the Livingstons), Philipse Manor House, Jumel House (Fort Washington), Smith House (Sharon, Conn.), Pierce Homestead, Parson Williams's House, Varina (Pocahontas), Jamestown, and Williamsburg.

Dr. Jaeger's

SANATORY UNDERWEAR

AS USED BY

Dr. Nansen

on his famous Arctic sledge journey.

"The result of all this experimenting was that I made up my mind to keep to my woollen clothes, which would give free outlet to the perspiration. Johansen followed my example, and on the upper part of our bodies we each had two Jaeger Undershirts next the skin, etc., etc."—"Farthest North," Vol. II., p. 115.

This Applies to You.

Jaeger Underwear allows the skin to breathe freely, at the same time absorbing its exhalations, leaving the body dry and warm. Gives the greatest warmth with the least weight.

"In a country unsurpassed for magazines, 'The Century' stands unsurpassed."
—*Chicago Tribune.*

THE CENTURY

For the Coming Year.

DR. S. WEIR MITCHELL.

THE *Boston Herald* recently said: "So adequate a combination of ability and of interest, of timeliness and of permanency, of criticism and description, of fiction and of history, and finally of literature and of art, is not attained by any other magazine." In the pages of THE CENTURY appear the articles that people talk most about—those which attract the most attention in the world of letters. Its editorials make for good citizenship; as has been aptly said, "THE CENTURY stands for something."

The plans for the coming year justify the publishers in the belief that not only will all of the cherished traditions of the past be preserved, but that the magazine will make a distinct advance, winning new friends and adding many new subscribers. The great success of Dr. Weir Mitchell's novel of the American Revolution, "Hugh Wynne, Free Quaker," will make of special interest the announcement of

A New Novel by Dr. Mitchell

"THE ADVENTURES OF FRANÇOIS"

A Story of the French Revolution.

IT will begin in an early number. Mrs. Burton Harrison's novel of New York life, "Good Americans," began in the November CENTURY. The attractions for the new volume cannot be better judged than by the following list of the important features which appear in the November and December numbers.

NOVEMBER

Beginning the Volume. Sold everywhere.

First chapters of
Mrs. Burton Harrison's novel
"GOOD AMERICANS."

Andree's Flight into the Unknown.
Impressions and Photographs of an Eye-Witness.

THE SULTAN OF TURKEY ON THE ARMENIAN QUESTION.
An interview with the Sultan by the Hon. A. W. Terrell, ex-minister to Turkey, giving the Sultan's side of the Armenian troubles which he desires Mr. Terrell to communicate to the American people,

Stories by Frank R. Stockton,
and by the author of
"The Cat and the Cherub."

Poems by Bret Harte and James Whitcomb Riley.

A Map in Color of Greater New York.

Contributions from Mark Twain and John Burroughs.

AN IMPERIAL DREAM.
A woman's reminiscences of Mexico during the French Intervention.

"Mozart," by Edvard Grieg.
"GALLOPS."
The first of a group of strikingly original stories about horses, by a new writer.
Etc., etc., etc.

DECEMBER

Christmas Issue. Ready Dec. 1st.

Four Engravings by T. Cole
after Gainsborough.
Merry Christmas in the Tenements.
By Jacob L. Riis, author of "How the Other Half Lives." Illustrated by Hambidge.

Edwin Booth in London.

A Religious Painter.
The work of Fritz von Uhde. Illustrated.

TENNYSON AND HIS FRIENDS AT FRESHWATER.
Reminiscences of those who enjoyed the companionship of the poet, published with the consent of the present Lord Tennyson. Superbly illustrated.

The Morning-Glories of Japan.
By the author of "Jinrikisha Days." With reproductions of exquisite paintings by Japanese artists.

The Author of "A Visit from St. Nicholas."

Second Instalment of
Mrs. Harrison's Novel "Good Americans."

An Essay by the late Gen. Francis A. Walker on "The Causes of Poverty."

Second part of
James Whitcomb Riley's Poem "Rubáiyát of Doc Sifers,
begun in November.

SIX COMPLETE STORIES
by Henry van Dyke, Marion Manville Pope and others. Etc., etc., etc.

The Price of the Century is $4.00 a year. New Volume Begins in November.

The $6.50 Offer.

The Century Magazine for one year, $4.00
The Century Gallery of One Hundred Portraits, regular price, ... 7.50
$11.50

The two for $6.50 to any address.

The publishers of THE CENTURY, having had constant calls for proof copies of famous portraits that have appeared in its pages, have now gathered together the very best and most popular one hundred portraits, printing them on heavy paper, size 9½x13½, and have issued them in portfolio form at a nominal price to CENTURY readers. Next season this Gallery will be offered for sale to the public at $7.50, but this year it will positively be sold only in connection with new subscriptions or renewals to THE CENTURY at $6.50 for the two, $2.50 for the Gallery and $4.00 for the magazine. All dealers supply the portfolio in connection with subscriptions, or remittance may be made directly to the publishers.

THE MACMILLAN COMPANY'S
NEW LIBRARY AND STANDARD BOOKS.

ADAMS.

The Growth of the French Nation. By GEORGE BURTON ADAMS, Professor of History in Yale University. With Maps and many Illustrations. 12mo. Cloth. Price, **$1.25** *net.*

"It would be scarcely possible for French history to be set before educated men in so small a compass more skilfully, more graphically, or more thoroughly in accord with the results of recent investigation; certainly no English history of France of the same size can compare with it for accuracy or interest."—*English Historical Review.*

ARMOUR.

The Fall of The Nibelungs. Done into English by MARGARET ARMOUR. Illustrated and Decorated by W. B. MACDOUGALL. Square 8vo. Cloth Price, **$2.50.**

Simrock's arrangement of the mediæval text is the one that has been chosen for translation, and the plain prose rendering that has been attempted in this work should be welcome to those who like a translation to bring them as near as possible to the original.

BALDWIN.

Social and Ethical Interpretations in Mental Development. A Study in Social Psychology. By JAMES MARK BALDWIN, Professor in Princeton University, Co-Editor of the Psychological Review. *Work crowned wi h the Gold Medal of the Royal Academy of Denmark,* 12mo. Cloth. Price, **$2,60** *net.*

CARLYLE.

On Heroes and Hero Worship. By THOMAS CARLYLE. Edited with Notes by Mrs. ANNIE RUSSELL MARBLE. 16mo. Cloth. Price, **80 cents** *net.*

*CONWAY.

The Italic Dialects. Edited with a Grammar and Glossary by R. S. CONWAY, M.A. 8vo. Cloth. 2 vols. Price, **$7.50** *net.*

Vol. I. Part I. **The Records of Oscan, Umbrian, and the Minor Dialects,** including the Italic Glosses in Ancient Writers, and the Local and Personal Names of the Dialectal Areas.

Vol. II. Part II. **An Outline of the Grammar of the Dialects,** with Appendix, Indices, and Glossary.

* *Cambridge University Press.*

ECONOMIC CLASSICS.

Edited by W. J. ASHLEY, M.A., Professor of Economic History in Harvard University.

New Volume.

Cournot (AUGUSTIN).—**Researches into the Mathematical Principles of the Theory of Wealth** (1838) Translated by NATHANIEL T. BACON. With a Bibliography of Mathematical Economics by IRVING FISHER. 16mo. Cloth. Price, **75 cents** *net.*

EX-LIBRIS SERIES. *New Volume.*

Decorative Heraldry. By G. W. EVE. With 188 Illustrations, including 4 in color and 1 Copperplate. Imperial 16mo. Price, **$3.50** *net.*

This book contains a short and valuable Primer of Heraldry, with the tinctures and ordinaries illustrated by a series of drawings by the author, who is a well-known expert.

FOREIGN STATESMEN SERIES (The)

Edited by J. B. BURY, Author of "The Later Roman Empire," etc. Uniform with the *Twelve English Statesmen Series.* Crown 8vo. Cloth. Price, **75 cents** each.

Philip II. of Spain. By MARTIN A. S. HUME.
William the Silent. By FREDERIC HARRISON.
Maria Theresa. Dr. J. FRANCK BRIGHT.
Charles the Great. By THOMAS HODGKIN, D.C.L.

GARDNER.

A Handbook of Greek Sculpture. By ERNEST ARTHUR GARDNER, M.A., formerly Director of the British School of Archæology at Athens. Two Parts bound in 1 volume. 12mo. Cloth. Price, **2.50** *net.*

This book was originally brought out in two separate parts, and these are now bound together in the present useful form.

GEIKIE.

The Founders of Geology. By Sir ARCHIBALD GEIKIE, Hon. D.C.L. Oxf., Hon. D.Sc. Camb., Dubl., Hon. LL.D. Edin., St. And., Director General of the Geological Survey of Great Britain and Ireland. 8vo. Cloth. Price, **$2.00.**

A course of Lectures delivered at the Johns Hopkins University to inaugurate the Lectureship founded in that seminary in memory of the late George Huntington Williams.

HASSALL.

A Handbook of European History from 476-1871. Chronologically arranged. By ARTHUR HASSALL, M.A. 12mo. Cloth, gilt top. Price, **$2.25** *net.*

This is a handbook for students and teachers, and the author has endeavored to bring into prominence the leading facts in the history of the principal states. The text has been arranged in parallel columns for the purpose of showing more clearly the events as they transpired in each State at one and the same time.

HOOD.

Poems of Thomas Hood. Edited by ALFRED AINGER. With Vignettes and Portraits. Vol. I. Serious Poems. (With Memoir.) Vol. II. Poems of Wit and Humour. 2 vols. 12mo. Cloth. Price, **$3.00.**

HYDE.

Practical Idealism. By WILLIAM DEWITT HYDE, President of Bowdoin College, Author of "Outlines of Social Theology," etc. 12mo. Cloth. Price, **$1.50.**

Contents of Part I. The Natural World: Chap. I. The World of Sense-perception. II. The World of Association. III. The World of Science. IV. The World of Art. Part II. The Spiritual World: Chap. V. The World of Persons. VI. The World of Institutions. VII. The World of Morality. VIII. The World of Religion.

JANNARIS.

An Historical Greek Grammar, chiefly of the Attic Dialect, as Written and Spoken from Classical Antiquity down to the Present Time. Founded upon the Ancient Texts, Inscriptions, Papyri, and Present popular Greek. By A. N. JANNARIS, Ph.D., University of St. Andrews, Author of "An Ancient Greek Lexicon for Greeks," etc.,etc. 8vo. Cloth. Price, **$8.00** *net.*

NALL.

Elementary Latin-English Dictionary, to the Prose Writings of Cæsar, Sallust, Nepos, Livy, Eutropius, and portions of Cicero; and the Poems of Catullus, Vergil, Horace, Ovid, and Phædrus. For use in Preparatory and High Schools. By the Rev. G. H. NALL, M.A., Assistant Master at Westminster School. 12mo. Cloth. Price, **$1.00** *net.*

PAGE.

Ordinary Differential Equations. An Elementary Text-Book. With an Introduction to Lie's Theory of the Group of one Parameter. By JAMES MORRIS PAGE, Ph.D., University of Leipzig; Fellow by Courtesy, Johns Hopkins University; Adjunct Professor of Pure Mathematics, University of Virginia. 12mo. Cloth. Price, **$1.25** *net.*

SHUCKBURGH.

A History of Rome for Beginners. From the Foundation of the City to the Death of Augustus. By EVELYN S. SHUCKBURGH, late Fellow of Emmanuel College, Cambridge. With Illustrations and Maps. 16mo. Cloth. Price, **90 cents** *net.*

This book is not a mere abbreviation of Shuckburgh's larger history, but has been written for the most part entirely afresh, and is intended to put the main events of Roman history, both in regard to political development and imperial extension, as simply and briefly as possible.

SICHEL.

The Household of the Lafayettes. By EDITH SICHEL. With a Frontispiece and many Portraits. 8vo. Cloth. Price, **$4.00.**

SPENSER.

Faerie Queene. Pictured and Decorated by L. FAIRFAX-MUCKLEY. With an Introduction by Professor J. W. HALES. *This Edition is strictly limited,* In two vols. Quarto. Sateen, gilt top, full-gilt side. Price, **$15.00** per set.

THOMPSON.

Light Visible and Invisible. A Series of Lectures delivered at the Royal Institution of Great Britain, at Christmas, 1896. By SILVANUS P. THOMPSON, D.Sc, F.R.S., M.R.I., etc., author of "Electricity and Magnetism." With numerous Illustrations. 12mo. Cloth. Price, **$1.50.**

WESTCOTT.

Christian Aspects of Life. By BROOKE FOSS WESTCOTT, D.D., D.C.L., Bishop of Durham. 12mo. Cloth. Price, **$2.00.**

WILCOX.

The Study of City Government. An Outline of the Problems of Municipal Functions, Control, and Organization. By DELOS F. WILCOX, A.M., Ph.D. 12mo. Cloth. Price, **$1.50** *net.*

The author discusses in turn problems of function, of control, and of organization, and his book will be very useful, not only to students in colleges and secondary schools, but even more to any class of citizens who are interested in the betterment of municipal conditions through the development of intelligence and the sense of civic responsibility.

WILSON.

Nature Study in Elementary Schools. A Manual for Teachers. By Mrs LUCY L. W. WILSON, Ph.D., Normal School for Girls, Philadelphia. Cloth. 16mo. Price, **90 cents** *net.*

Send for the **New Illustrated Christmas Catalogue** *issued by*

THE MACMILLAN COMPANY, 66 Fifth Ave., New York.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 18, 1897.

The Week.

We have long been trying to get some Dingleyite to tell us exactly when the famous tariff for revenue is going to produce revenue, and we at first thought that the *Tribune's* elaborate article on the subject on Thursday would give us a definite date; but it miserably fails us. November was to be a great revenue month, but all that is now claimed for it is that it will produce "almost" enough to meet the month's expenses. Not a deficit, you observe—that is a hateful word—but almost enough. Then we read on and find that there is "fair ground for hope" that "by the end of the year" the Dingley tariff (elegantly called by the *Tribune* "the revenue bill") will "begin to return enough to meet current expenditures at the ordinary rate." This looks encouraging, but we are instantly reminded that "the disbursements in January" are "usually larger than in most months," so there will be "no occasion for disappointment" if there is a deficit in January, too. There the matter is left hanging, and we are as much in the dark as ever as to when the revenue is to begin. Mr. McKinley told us on March 4 that we were to have sufficient revenue *"without delay, hindrance, or postponement."* The deficit for the fiscal year to date is 44,000,000, and there will be no occasion for disappointment, the *Tribune* says, if it amounts to $50,000,000 by the end of January. The bigger the deficit, the more "cheerful" the Republicans. With the finances in such a snarl it is certain that the country would not dare put incompetent Democrats in charge again.

It has been hastily assumed that the transfer to the United States Treasury of $14,000,000 on account of the Pacific Railway sale will add just so much to the available assets. But this is to overlook the extraordinary American genius for finance. That money is a sacred fund, as it were, not to be expended in any ordinary way, but to be devoted exclusively to some new form of extravagance. The Nicaragua Canal Association has already held a meeting and voted that this Pacific money be religiously set aside for itself. We are sure the pension agents will also want it, and so will the ship-armor men, and the sugar-bounty men, and the bounty-on-exports men, to say nothing of the one-cent postage men, and the buying-of-Cuba men, and the other men, amounting to the whole membership of Congress, each of whom would like to grab the whole sum for "public works" in his own district. The fact is that the unexpected addition of $14,000,000 to the Treasury is evidently going to excite the maddest competition to see who shall have it. The net result will probably be some log-rolling scheme by which $40,000,000 or $50,000,000 will be taken from the Treasury on the strength of this extra $14,000,000 put into it.

There is great enthusiasm in the protection press just now over reciprocity—especially Canadian reciprocity. If the farmers in northern New York had, in grateful acknowledgment of protection against Canadian hay and barley, voted the Republican ticket a little more heartily on November 2, the case might have been different. One of the fundamental principles of the protectionist economy is, no Republican votes, no protection. This was explicitly assigned as the reason for giving up the sugar duties in 1890. Louisiana, by her steady Democratic majorities, had forfeited all right to protection; and if the farmers on the Canadian border aren't going to pay for protection by votes, why, it will be only right to expose them at once to the horrors of Canadian hay and barley. But this is to be remembered in all the negotiations, that if a reciprocity treaty is agreed upon, it will be due to a change of policy at Washington. The Canadians have been willing to make an agreement from the start. They had representatives in Washington before the Dingley bill was hatched, inquiring what could be done to facilitate trade. But they were rebuffed. It was because they could do nothing with the United States that they turned to England. So it was explicitly stated in the Canadian Parliament. Thus if there is now any change of plan it must be on the part of our Government. Canada has always been ready to enter into a reasonable treaty. Whether one can be framed that the Senate would ratify is doubtful, but we surely have no objection to protectionists undoing, in the name of reciprocity, what they have done, to their own manifest alarm, in the name of protection. The difficulty is to keep reciprocity as a commercial question from getting mixed up with reciprocity as a political question.

Prof. Taussig, in his answers to the questions of the Currency Commission, advances the opinion that the silver currency (certificates and dollars) will not prove an embarrassment to the Government if the legal-tender notes are retired, and hence that it will not be necessary to provide for their redemption in gold. Probably every competent authority will concur in this opinion. There is a certain field of circulation to be filled with currency of certain denominations, from one dollar up to tens and twenties. Congress can, if it chooses, assign this field to the existing silver certificates and silver dollars with the assurance that they will be so constantly employed as to give no trouble. Even if they were made specifically redeemable in gold, they could not, in such case, be collected for the purpose of redemption. They would fill the same rôle as the uncovered circulation of the Bank of England, or the five-franc pieces of France, or the thalers of Germany. Redemption would be merely nominal, as it is now, yet the silver currency would continue at par as it is now. Prof. Taussig makes the further recommendation that the retirement of the greenbacks should be made *pari passu* with the issue of banknotes, or at the rate of four dollars of the former for five of the latter. This is a suggestion of a political rather than an economical kind, but is a wise one, and will, no doubt, be followed by Congress, if that body can be induced to provide for the retirement of the greenbacks on any terms.

The recent elections, and particularly those in Kentucky and Iowa, show that the Bryan element has secured a hold upon the Democratic organization so firm that it need no longer fear the opposition of the Gold Democrats. In both Kentucky and Iowa the National Democrats put excellent tickets in the field, and conducted a vigorous canvass, but in each case the vote polled was small, and it is obvious that most of those who dissented from the Chicago platform last year are ready to fall back into the ranks. The principle of "regularity" has always had great weight with Democrats, and while some believers in the gold standard excused their support of the regular candidates who were running on a silver platform this year on the ground that the contest was really on State issues, it is evident that many of these will do the same thing next year, when nobody can dispute that the issues are national. A few old Democrats voted the Republican ticket again this year as they did last year, but the whole drift of things since McKinley's inauguration has been calculated to discourage such a tendency, and they will be still less inclined to keep it up next year.

Another thing which has been made plain, especially by the result in Iowa, is the hopelessness of maintaining a separate Populist organization. Many members of that party detested the fusion with the Bryan Democrats in the Presidential contest, and vowed that

they would never support such a coalition again. These "Middle-of-the-Road" men put up a ticket of their own in Iowa, and expected that it would receive a good many votes, but the movement "petered out" until it had become ridiculous even before election day. It is as obvious to old Populists as it is to old Democrats that no third organization is likely to amount to anything under present conditions, and this forces the former, as well as the latter, to choose between the Republicans and the Bryanites who have got control of the Democratic organization. The only question left is as to the relative proportions of Populist principles which will be found in so-called Democratic platforms hereafter, and the promise is that they will be large enough to reconcile even "Middle-of-the-Road" men.

The sworn returns of expenditures which candidates for office in this State are required to make are always illuminative, although our law is the most inadequate one of its kind in this country. It requires sworn returns by candidates, but not by campaign committees, and in this respect is especially defective. Candidates can conceal the real use to which their money is put by turning it over in a lump sum to the committees, and it is not possible to trace it further, except by requiring the committees to account for its use, as is done in all adequate corrupt-practice laws. Still, the statements made by candidates are often of value, merely as revelations of the amounts which are spent in an election. Thus, Francis M. Scott's return disclosed the fact that he had paid Tammany Hall nearly $9,000 for his nomination to the Supreme Court bench. Comptroller Fitch's return shows that he paid over $1,000 for various purposes, including "advertising." The latter item includes, without doubt, the eulogistic biographical sketch of Mr. Fitch, with his portrait in the centre, which appeared in the papers a few days before election. Many of the candidates are more frank about this item than Mr. Fitch is, and set it down openly as "newspaper sketches." It is the old "reading notice" in a new form.

But defective as our corrupt-practice law is, it is far from being strictly enforced. In many localities it is treated as a joke, and its provisions are openly defied. Take, for example, the following return made by Frank Matty, a candidate for Alderman in Syracuse:

For newspapers	$10 00
Janitor service	5 00
Hacks and carryalls	20 00
Refreshments and cigars	200 00
For renewing old acquaintances and forming new	900 00
	$1,135 00

Compare this impudent performance with the requirements of the law:

"Every candidate who is voted for at any public election held within this State shall, within ten days after such election, file an itemized statement showing in detail all the moneys contributed or expended by him, directly or indirectly, by himself or through any other person, in aid of his election. *Such statement shall give the names of the various persons who received such moneys, the specific nature of each item, and the purpose for which it was expended or contributed.*"

It is perfectly clear that Mr. Matty has not complied with the law. It is also clear from his statement that he made very doubtful use of his money, and as he was elected by a plurality of only 200 votes, his defeated opponent ought to bring him into court at once and compel him to make his return conform to the law, or suffer the penalty.

An amusing "coincidence" is pointed out by the *Tribune* in the virtually simultaneous publication of the same editorial article in Platt's Owego paper and his personal organ in this city. It was a statesmanlike comment on the result of our municipal election, placing all the blame of Tammany success upon the Citizens' Union, and "thanking God" that Seth Low had not been elected. Platt seems to have composed the article in advance of the election for use in his organ here, and to have been so pleased with it that he took a "proof" of it with him to Owego, Tioga County, when he went there to vote. There is nothing surprising in this coincidence. The only unusual aspect of it is that the article should appear in only two of the Platt organs at once. Heretofore, Platt's custom has been to supply all his editors throughout the State with his views editorially expressed in circular form. These are usually quoted here in his personal organ as evidence of the soundness of the rural Republican press. It is a droll business in every way, but in nothing more so than the solemnity with which the Platt editors go about it.

Little has been heard since the election about Congressman Grosvenor's bill to repeal the civil-service law. A month ago we were told that the Grosvenor project was gaining friends every day, and that it would certainly be introduced and passed in the coming session. Some of its over-enthusiastic promoters thought that it would command enough votes to be passed over a veto if the President should separate himself from his party on this subject. In all this chatter no mention was made of the following clause of the Republican national platform, to wit:

"The civil-service law was placed on the statute-book by the Republican party, which has always sustained it, and we renew our repeated declarations that it shall be thoroughly and honestly enforced, and extended wherever practicable."

Why do we hear no more of this hopeful scheme? What has occurred to damp the enthusiasm of the repealing squad? Possibly the signs of a coming *débâcle* may have been discerned in the voting on the 2d of November. It would not be a nice thing to repeal the civil-service law and thus enable the Democrats to turn out all the Republican clerks, letter-carriers, postal-route agents, and minor officials all over the country and fill the places with their own "heelers." The fable of the dog that dropped a good piece of meat in the stream in order to grab what he took to be another piece from the mouth of another dog, has much pertinence in this case. Already we hear the Tammany heelers thanking Gov. Black for taking the "starch" out of the civil-service law of this State. They expect to have a Governor of their own kind soon, and when that times comes, they will not be so much embarrassed in finding places for good Democrats as they were when they were last in power at Albany. It is often said that there is no great loss without some small gain. Such would seem to be the case this fall. The Grosvenor repealing law, we venture to say, will not be passed this winter.

Judge Jackson, of the United States District Court for West Virginia, has rendered a decision in which he stoutly maintains that the civil-service rule against removals for political reasons has all the force of statute law, and that no superior official can legally so remove any subordinate in the classified service. The case which came before Judge Jackson was one in which a new (Republican) collector of internal revenue attempted to remove a gauger and a storekeeper (Democratic) in a distillery from their positions by transfers to less desirable places for no other reason than their politics. Some minor points were raised in defence of the collector, into which it is unnecessary to enter, as whether such a transfer was technically a removal. The vital part of the decision is that in which the Judge maintains that the civil-service act is constitutional, and that the executive rules proclaimed by a President under the provisions of that act have themselves the binding effect of the original law, being in fact only methods of carrying out that law. On the 27th of July last, Mr. McKinley issued an order which laid down the rule that "no removal shall be made from any position subject to competitive examination, except for just cause, upon written charges filed with the head of department or other appointing officer, of which the accused shall have full notice and an opportunity to make defence." In the West Virginia cases the collector attempted to remove men "for the good of the public service," without specifying any "just cause" or giving them "an opportunity to make defence." Judge Jackson holds that this action was as plainly illegal as it was obviously improper. His argument runs thus: In the first place, the rules promulgated

by the President and the Civil-Service Commission are clearly within their scope and power, under the civil-service act of Congress; and when they exercise the power to limit and restrict the power of removal as they deem best for the public interest, it is only the execution of a duty imposed upon them by Congress and which should be effectually performed and fully complied with. The very object and purpose of the rule of July 27 regarding removals was to furnish a full opportunity to everybody within the classified service to meet any charges made against him, and to prevent his removal without such charges. The assignment of the "good of the public service" as a reason was an attempt to evade the rule, and was "too general, vague, and indefinite to authorize the removal of an officer under existing law."

The respectable negroes of Texas have held a convention at Columbus, which took action that was most creditable to the race. The cause of the meeting was "the alarming frequency of the crimes of criminal outrage and murder by mob violence," the leaders in the movement rightly holding that this state of things made obvious the necessity for action on their part. Resolutions were adopted deprecating the violation of any man's home; deploring "the crimes which have brought a blot upon our people, irrespective of race"; declaring themselves "at the service of any party whose family has been outraged, to do all in our power to apprehend and bring to justice any person who has been so forgetful of the sanctity of female virtue as to violate it"; and asking their white fellow-citizens "not to condemn a whole race for the sins of a few among them, and that they accept our services in ferreting out and bringing such criminals to justice." If the leaders among the blacks can hold their race up to the level of this spirit, they must greatly discourage the perpetration of the crime which has caused so many lynchings, and they should receive the coöperation of the whites in insisting upon legal trials, instead of mob violence, for those who still commit the offence.

The Princeton Inn bade fair to arouse a fiercer discussion in the Presbyterian Church than ever the Princeton theology excited, but Prof. Shields cut all short by promptly withdrawing from the church. He maintained that the persecution to which he was being subjected for having signed an application for a liquor license for the Inn was an unjustifiable interference with his personal rights, and in this position he was supported by so good an ecclesiastical lawyer as President Patton; but rather than precipitate a long wrangle and trial, he stepped out incontinently. Of course the Presbytery had to indulge in some of the "current compliments of theological parting," and if it did not ban and anathematize Prof. Shields, it took occasion to remind him, and other brethren beloved, that to sign an application for a liquor license was to be guilty of "reprehensible complicity" with evil. But much more so, according to other deliverances of the General Assembly, is drinking or offering drink to others; and at least equally so is theatre-going. Yet Prof. Shields might point to honored officers of the church who do these things unrebuked. But the point was that an ecclesiastical fury had been stirred up on the subject of the Princeton Inn, and that a victim was necessary. Prof. Shields's immolation of himself should serve—though the whiskey-drinking divines of earlier Presbyterian days would be puzzled to make out what the row was all about.

We hope the deliverance of President Schurman of Cornell University on football, as reported in the papers, is not a fair specimen of the style of reasoning he teaches his students. Here it is:

> "Several persons playing football have recently been seriously hurt. A far larger number travelling for pleasure on railways have recently been killed. Yet freedom of travelling remains; why, then, an ordinance against football?"

The reason is that people travelling on railroads do not court danger, but avoid it, and would not take a train in which an accident was likely to occur or in which they might be pummelled by the conductor; that when they are killed, therefore, they are killed by pure accident, not by riding on the cowcatcher, or by trying to jump on the train when in motion; that railways are highroads which people must take if they travel at all, and not roads which people take only when travelling for pleasure; that railroad passengers are commonly adults of mature judgment, whose freedom of locomotion cannot be restrained, while the persons who are "seriously hurt playing football" are youths *in statu pupillari*, who can, and ought to be, and are, restrained from pastimes dangerous to health or morals. A pugilistic ring fight, or a "rough-and-tumble" Georgia fight, would not be permitted in any college in the country, however much amusement it would afford. Railroad passengers are not in college, and are not learning how to behave. The analogy, therefore, is not one that either inspires respect or suggests pleasant thought.

The order for "concentration" in Cuba, about the modification of which so much is heard just now, was, of course, a war measure pure and simple. It was intended to cut off the supplies of the roving bands of insurgents. It was, moreover, essentially a measure of retaliation. The revolutionists began the concentrating—that is, they compelled farmers and planters and peasants to declare for the republic, and to furnish supplies, or else to go over bag and baggage to the Spanish lines, thanking their stars that they were not hanged on the spot, as there is reason to believe that too many of them were. Thereupon, Gen. Weyler said it was a poor rule that would not work both ways. If no non-combatants of Spanish sympathies were to be left in peace, none of Cuban sympathies should be. And there was also the possibility of seriously crippling the revolutionists by laying waste and depopulating the farms and plantations whence they had been obtaining food and horses. So the order was issued to drive in all the people of the country districts, who were allowed to cultivate the soil only within the "zones" marked out by the Spanish military authorities. That frightful suffering resulted is undoubted. But it was a result, as we have said, of a war measure, and war measures have a way of producing suffering. To modify or repeal this measure now will naturally give aid and comfort to the insurgents. They will have an easier chance to get supplies, and they will also feel that Spain is relaxing the fierce energy of her efforts to overwhelm them. That Gen. Blanco has moved in the matter as far as he has, shows how anxious the new Spanish Ministry is to please the United States and to placate the Cubans.

Sir Robert Giffen expresses in the *Nineteenth Century* the general English feeling that the Government has been dancing on the edge of a bimetallic precipice. He declares that the City was justly amazed to learn that British Ministers had "listened gravely" to the astonishing proposals made them, and had dealt with these proposals "in a dilatory fashion," when they should have been "summarily dismissed." But, at any rate, argues Sir Robert, something has been gained, which is the conviction, now so earnest and widespread in England, that there "must be no playing with bimetallism in our communications with foreign nations." "We have had a sufficient lesson. Our courtesies are interpreted as business," and any further dallying out of courtesy will surely bring Nemesis. Above all, no more futile international conferences. "How could sober Englishmen, with their belief that the monetary unit is a certain weight of the metal chosen for the standard, ever discuss money with those who believe that money is the creation of law, and that some miracle takes place at the mint?" This is the thing, affirms Sir Robert, that makes bimetallic conferences such "pure farce," and the only way to stop them is for the Government flatly to say to all comers that it can neither confer, correspond, nor consider in reference to any proposal which implies a belief in the theory of bimetallism.

THE PRESIDENTIAL BOGIE.

Certain things have, in the course of events, been coming out more and more clearly since the disappearance from the political arena of the high moral issues raised by the anti-slavery agitation and by the war. The chief is the inordinate importance which the politicians are constantly endeavoring to ascribe to the Presidential election. That the Presidency is a great office, and that it ought, when Congress has lost so much character, to be filled by a man of courage and ability, there is no doubt. But the politicians by no means try to magnify the office, and generally nowadays pay scant respect to the actual incumbent. What they try to magnify is not the office, but the election to the office. They spare no pains to fill the popular mind with illusions as to the tremendous gravity for the country of the process of choosing, and of the prodigious risk we shall all run if the other man gets in. What the result would be if our own side does not succeed, they seldom set forth. As a rule, party discipline is so strict they do not need to set it forth. They leave it to the imagination. The result is that most of us have come to believe that one of the chief reasons for our existence is that we may elect Presidents; that government and public offices were not created for man's benefit, but that man was created simply that he might carry on government, and, at stated intervals, elect officers. If we show the least desire to consult the health and happiness of our families, the cleanliness and security of our streets, and the security of our homes and our property, instead of considering the best means of electing the President, we are actually reproached with want of patriotism.

This complete turning upside down of the early democratic idea of government and its objects is one of the oddest phenomena of the day. All who have read of the rise of democracy after our Revolution and that of France, or who remember its great step forward about 1830, must recall the fact that its earliest and most emphatic promise to humanity was that the government should be recalled to its original functions, promotion of the health and happiness and security of the masses; that for this purpose the huge and complicated machinery set up by monarchs should be abolished, and that "the greatest happiness of the greatest number" should be the one object of statesmen, and that everything relating to government should be simplified and cheapened. The paraphernalia of monarchy were to go—the standing armies, the sinecures, the enormous salaries, the pensions, the wars, the dynastic alliances, and all the falsehood and humbug of courts. The French revolutionary war-cry, "Guerre aux châteaux, paix aux chaumières," rang through the world like a trumpet-blast which announced the dawning of a new era.

In one century we seem to have forgotten all this. We have allowed the politicians to "set up" at Washington a game of extraordinary cost, corruption, and complications, as expensive as a monarchy, and consisting simply in filling the place of chief magistrate. We have allowed them so to stuff our imagination with this game that we feel as if we ought to surrender the very ends of government—peace, security, and health—in order to enable them to carry it on with vigor. In comparison with the business of enabling Platt or Croker to elect their man, we have come to look on the very foundations of civilized society as trifles. We cannot police our cities, or elect our health boards, or our School Commissioners, or even buy our clothes, without considering what the effect will be on the next Presidential election. And yet the President has very little power, of legislation none, and the little he has he is bound by one of the most solemn of human oaths to exercise for the comfort and safety of the masses—not to rush into unnecessary wars, not to give away places of trust and emolument so as to satisfy greed or selfishness, not to promote reckless expenditure so as to increase the taxes—not, in short, to veil from the popular eye, for one moment, the great fact that the government was made for man and not man for government.

The game at Washington, however, does not confine itself to the Presidential election. It embraces legislation. People have long ceased to expect from that quarter any laws intended to promote the popular welfare. The business world trembles when Congress meets. Merchants and bankers do not know the day when they will be called on to back up some silly war by the sacrifice of their property, or submit to some senseless exaction because somebody in Congress thought it a good vote-catching dodge. In fact, congressional action has for years been devoted to vote-catching. It is hardly possible to get a measure through the two houses which will benefit neither set of politicians, or will please the supporters of the other party. The experience of the human race, its science, its wisdom and learning, are of no more use in Washington than they would be at an Ojibway council. The Naval Observatory, the Census Bureau, the Coast Survey are all roped into the game. Mathematical problems are decided in caucuses by majority, and the roar of a Kansas Populist counts for more than the words of the greatest jurist or philosopher, because his roar brings votes, while the words of the jurist or philosopher bring nothing but grace, wisdom, and understanding.

What we need is a great revival that will bring back to the minds of the American people the objects for which this government was established, and for which all governments ought to exist. It was established not for the election of officers, but "to establish justice, insure domestic tranquillity, *provide for the common defence*, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity." Nothing here about aggression, or annexation, or big navies to make people "stand round," or extravagant monarchical pensions, or dirty cities, or corrupt bosses, or "party fealty." This declaration was the preaching of a new gospel to suffering humanity. Yet in one hundred years we have, in many of our States and most of our cities, surrendered our liberties to dictators so base that the framers would not have spoken to them; have elevated the Presidency into an expensive and corrupt monarchy, and, before every quadrennial election, look round with bloodshot eyes for somebody to fight with, as part of the regular procedure.

CRIMINAL USE OF CORPORATE FUNDS.

In the recently published correspondence relating to the alleged payments to T. C. Platt for political purposes by a life-insurance company, Mr. Dawson, the witness in the ease, made the statement that he failed to see the significance of the charge, if true. "Unless it can be shown," he says in his letter, "that he [Platt] made a wrong use of the money, converted it to his own use, or promised some improper favor in return, the circumstance has no especial significance." The idea which underlies this evidently is that for an insurance company, bank, or railroad to subscribe money to elect Tammany or Republican politicians to office is a perfectly legitimate corporation expenditure. Thirty years ago the expression of such an idea would, all over the United States, have excited widespread surprise. When the late Jay Gould, for instance, testified that he was a Republican in Republican counties, a Democrat in Democratic counties, and doubtful in doubtful counties, but always "for the Erie Railroad," it was thought to be an illustration of individual depravity. The thing has now become common, and any one curious in such matters can ascertain without difficulty the precise amounts currently reported to have been paid to each party in the late campaign in this city by one of the corporations chiefly interested.

The legal significance of a charge that money has been so paid is certainly worth examination. The view that the law takes of corporate funds is that they are the private property of the stockholders in the management of directors or trustees for a special purpose, which is stated in the charter—as, the insurance of lives, the transportation of goods and passengers, the discounting of pa-

per. It follows from this that those directors or trustees have no power or right to use those private funds for utterly different purposes. To do anything of the sort even innocently is *ultra vires*, beyond the powers conferred in the charter. "No rule of law comes with more reasonable application" than that corporate powers are only those of the charter, says Kent; and to clinch the matter, the New York Revised Statutes (2 R. S., 9th ed., p. 978) provide that "no corporation shall possess or exercise any corporate powers not given by law, or not necessary to the exercise of the powers so given." Nothing is said by Kent, or Blackstone, or Morawetz, or in Green's Brice on *Ultra Vires*, on the subject of the right of an insurance company to contribute to the expenses of a political organization, for these writers do not discuss cases too clear for argument. The business of insuring lives has nothing to do with that carried on by Tammany Hall or Platt; the right to subscribe to campaign expenses is not given by law, nor is it necessary to the exercise of the function of issuing policies on lives given by law. Cases far less plain have been held by the courts to be clearly within the rule. Thus, when the Old Colony Railroad in Massachusetts made a subscription to guarantee the expenses of a "World's Peace Jubilee," the Supreme Court of that State held that no action could be maintained for the money, because, as lucidly explained by Gray, C. J., in an elaborate opinion, a world's peace jubilee is an enterprise "wholly outside the objects for which a railroad corporation is established" (Davis vs. Old Colony Railroad, 131 Mass., 258).

It follows from this necessarily that acts obviously *ultra vires* are not the acts of the corporation at all. The money comes out of the corporation exchequer, but the act of the director or trustee in paying it out is the act of the person who does it. He takes money which is not his, and applies it to a purpose for which it was not intrusted to him. The owners of the money, the corporation or the stockholders, must have some remedy for this, and, in fact, there are a variety of remedies. Thus, if the act is not yet complete, but only threatened, the stockholders may get an injunction (Barr vs. New York, L. E. and W. R. R. Co., 96 N. Y., 444), and if the officers of the corporations have such complete control that the corporation itself cannot be set in motion to redress the wrong, a bill for a discovery of the facts and an accounting for the moneys diverted will be sustained (Brewer vs. Boston Theatre, 104 Mass., 378).

But it is not only the stockholders who have a right to complain. In all civilized communities the diversion of funds intrusted to the care of agents to purposes other than those for which they were given, is regarded as a matter in which the public have an interest; hence it will be found that our place to look for the view taken by the law of acts not merely *ultra vires*, but involving the misappropriation ot funds, is the Penal Code. As a general thing it will be found that a payment of corporate funds as a political assessment involves the commission of a crime or of a series of criminal offences. If the money were taken and handed over to the collector without its being accounted for at all, this would simply be "conversion" by a trustee, or, under section 541 of the Penal Code, larceny, punishable by a fine equal in amount to the money misappropriated with interest and 20 per cent. more, and imprisonment for a term equal to that applicable in the case of larceny, with five years added.

But of course the money is usually accounted for; and as a "politics" account would be plainly illegal, false entries must be made in the books to cover it up. "Legal expenses" is the head usually resorted to, though others may in special cases be better adapted to the end in view. When a reputable counsel is employed, he knows nothing about the matter; it is not his business to inquire. The false entry in the books is, however, also a crime. The Penal Code provides that any officer or employee of a corporation who "falsifies" any corporation accounts is guilty of forgery in the third degree, and may be punished with imprisonment for five years (sections 514, 525). It seems probable that the act of taking the money and paying it out knowingly for purposes obviously beyond the charter powers is larceny. Section 528 declares that any corporation officer or employee who appropriates any corporation funds to the use of any person "other than the true owner or person entitled to the benefit thereof," "steals such property and is guilty of larceny." If the amount misappropriated is more than $500, it is grand larceny in the first degree (section 530), and punishable with imprisonment for ten years.

But the person who collects the assessment may get the money from an unwilling corporation by threats or suggestions that some injury will be done if it is not paid. This by section 558 is the crime of blackmail, or extortion, punishable with imprisonment for five years. On the other hand, the person who pays the assessment may expect through it to influence members of the Legislature. If this is "directly or indirectly" the object of the payment, he is guilty of bribery, and is punishable by a fine of not more than $5,000, and imprisonment for not more than ten years, or both (section 66).

It will be seen that the law does not recognize any difference between blackmail obtained for one purpose and another, and, indeed, it cannot. Stockholders' property is in just as much danger at the hands of a politician who plays upon the fears of their trustees as a private fortune would be at the hands of any non-political knave who extorted money by threats of exposing family secrets; and no doubt the ruin of many a corporation has begun in campaign contributions, people who are ready to commit crimes to advance the interests of corporations being often ready to plunder them. Property exposed to such attacks is in the position of property at the mercy of a public enemy; the only limit to spoliation is his leniency.

In nine-tenths of all the payments by corporations for political purposes, fear is the operative motive, and the most effective way to put an end to them would be to put in the District Attorney's office a man who feels about political blackmail and corruption as every one does about private abuses of trust and extortion. The appearance on the scene of such an officer would no doubt be followed by the flight from the State of several persons. There would be little difficulty in getting evidence against the head of an organization out of power. But this remedy is just now a good way off, and hence it is at present only through stockholders in corporations who may object that any redress is likely to be obtained. A bill for a discovery and an accounting, where facts like those testified to by Mr. Dawson really exist and are capable of proof, would put the guilty parties in an awkward dilemma. Proof in court of acts of directors not merely *ultra vires*, but involving larceny. payment of blackmail, and forgery, would do much to make the real character of such transactions generally understood. It has just been most vigorously proclaimed by the Supreme Court of the United States, on a full review of the authorities, that it is no answer to a demand for equitable relief, when the case warrants it, that the acts complained of are also crimes (*In re* Debs, 158 U. S. 564).

RECIPROCITY WITH CANADA.

The project of a treaty of reciprocity with Canada has met with a very cordial response from the Merchants' Association of Boston. Probably the manufacturing and commercial interests of the East generally will regard it with favor, and inasmuch as the Bering Sea question is involved in it, we may expect that the sealing interest on the Pacific Coast may be counted on the same side. Apart from these special interests, it may be assumed that the large class who favored the arbitration treaty as a means of insuring peace between the two great English-speaking nations will favor reciprocity with Canada as a lesser means of bringing about the same result. Nothing works more effectively for peace than trade. Anything which pro-

duces closer commercial intercourse diminishes the chances of war. Hence we may expect the anti-Jingo sentiment of the country to favor the proposed treaty except so far as personal and private interests are thought to be unfavorably affected by it.

It is perhaps worth while to glance at the old treaty of reciprocity negotiated by Secretary Marcy on the part of the United States and Lord Elgin on the part of Great Britain. This instrument was ratified by the Senate and confirmed by both houses of Congress in 1854, and remained in force till 1866. It provided first for the enjoyment of the in-shore fisheries of Canada and the maritime provinces and islands by the fishermen of the United States and the use of the land (except private property) for curing fish and drying nets; also for similar rights to Canadian fishermen on our coast north of the 36th parallel of latitude—shell-fish being excepted in both cases. Next it was mutually agreed that the products of the soil, the forests, mines, and fisheries, including lumber and manufactured tobacco, should be admitted free of duty. The third proviso granted to American citizens the same right of navigation of the St. Lawrence River and canals as was enjoyed by British subjects, and to Canadians equivalent rights on Lake Michigan. This did not grant the right to participate in the coastwise trade. The treaty was to continue ten years, and until twelve months after either party should give notice of its desire to terminate it. The ten years expired while the civil war was raging in the United States. During its progress the Confederate leaders had used Canada more or less as a base of operations against the Union, and thus created a feeling of irritation which led to the denunciation of the treaty by us as soon as the time came around. The commercial effects of the treaty were never made a cause of complaint in either country. Not a syllable of complaint was ever heard from the agricultural interests of the United States from first to last.

The only objection that has been raised to the new treaty up to the present time comes from the Department of Agriculture, from which we hear that the growers of barley do not want to have their "protection" cut off or lessened by the admission of Canadian barley. This, of course, raises the question whether the consumers of barley have any rights that Congress ought to respect. The brewing interest is much larger, measured by dollars and cents and by the number of hands employed, than the barley-growing interest, and, as it is pretty well organized, it will probably take care of itself in the controversy over the treaty. If it does not, it can blame nobody but itself. No doubt the lumber barons will be up in arms; perhaps the coal barons also, although they may have more to gain than to lose by the mutual abolition of duties on coal. Perhaps wool will be left out of the arrangement, although the Canadian product is not much grown in the United States. All these details we shall hear from in due time. The main fact in the case is that the McKinley Administration is in favor of a treaty looking to a relaxation of trade restrictions on our northern border.

The Dingley tariff contains provisions for treaties of reciprocity limited to five years' duration, but it does not follow that treaties cannot be negotiated outside of those limitations. Congress has the same power now that it had before. The President and two-thirds of the Senate can make such treaties as they choose. If a treaty involves a change of customs duties or the appropriation of money, then precedent requires that the House shall join in passing an act to carry it into effect. At all events, such was the case in the Marcy-Elgin treaty and in the Hawaiian reciprocity treaty of 1875. So far as this goes, it is safe to say that any treaty which can command the support of two-thirds of the Senate can generally count upon a majority of the House also. There is no reason, therefore, to expect any serious opposition from the House if the project is acceptable to the President and Senate.

It is to be hoped upon all accounts that the plan may be successfully carried through. Not only will the sealing question and the Eastern fishery question be settled by it, but the market which we now enjoy in Canada for our own surplus products, and which is threatened by the new Canadian tariff, will be saved. Canada has learned the trick of maximum and minimum tariffs and she proposes to put it into execution. The effect of it will be to give preferential rates of 25 per cent. to British, and perhaps German and Belgian, goods before the end of the present year. It is certainly worth our while to prevent this, and the terms offered by Canada in exchange are as low as we could decently ask.

A TWO-SIDED STATESMAN.

There is no episode in Tennyson's Life more interesting than that which describes his intercourse with Gladstone. They first met in 1837, by Tennyson's calling on Gladstone, as a school friend of Arthur Hallam. From that time they saw as much of each other as Gladstone's busy political life would permit. They corresponded frequently. Gladstone reviewed some of Tennyson's poems when they appeared, and offered him a baronetcy long before the peerage came. They made a voyage together in 1883 to Scotland and Norway, during which Tennyson's biographer says, "Both men were as jovial together as boys out for a holiday, but they took good care to keep off the quagmire of politics." Only on two occasions, however, did Tennyson dissent from Gladstone about politics; one was when Gladstone extended the suffrage, and the other was when he brought in his Irish Home-Rule bill. But this never caused the slightest interruption in their friendship. During the latter period, Tennyson wrote to a friend, "I love Gladstone, but I hate his policy." They agreed and sympathized about poetry and art and religion. There was no more brilliant talk in England than that which took place between them on all these subjects. In 1889 Tennyson wrote to him that "it will be a lasting pleasure to you to know that the people of England are not ungrateful for all you have done for them in days that are no more." After Gladstone's first great defeat in 1874, he wrote to him, "Even if you rested now, your name would be read in one of the fairest pages of English history." In fact, during the fifty-five years of their acquaintance, their friendship was intimate, tender, and unbroken; and with Tennyson, who lived on the loftiest moral plane, friendship was a sacred thing, not to be shared with the unworthy.

During the past sixty years, too, no man lived in a fiercer light than Gladstone, or was in more frequent intercourse with all that was best and most distinguished in English politics and society, and especially (owing both to his place as a distributor of ecclesiastical patronage and his own theological tastes) with churchmen. He made many bishops, and he had many livings to bestow. Consequently all the biographies of distinguished men, from the publication of his first book, reviewed by Macaulay, down to 1890, in both political and religious life, abound with references to him, and their letters with judgments on him. Wilberforce, Newman, Church, Jowett, Manning, Lowe, Arnold, Tait, Russell, Palmerston, Magee, Ward, Peel, Darwin, Browning, in fact all the distinguished men of the "Victorian Age," make some mention of him in their correspondence. Many find fault with his policy, or depreciate his literature, but none ever fails to speak of his character with respect, and most of them speak with tenderness and admiration. They mention faults and foibles sometimes, but only as "spots on the sun." No other English public man has played a part so prominent in public life so long, and endured the criticism of three generations. Yet no record has ever "leaped to light" by which he could be shamed.

Outside the charmed circle of London society, properly so called, he has been equally beloved and admired. No other English public man has ever wielded the same influence over the masses. One blast upon his bugle-horn has really

been worth 10,000 men ever since he wrote the terrible letter from Naples in 1851 which smote the corrupt government of King Bomba like a thunderbolt, and really prepared the world for the Italian "risorgimento." His legislative measures surpassed in importance and beneficence everything attempted by any of his predecessors, even Pitt. Peel introduced free trade, but Gladstone framed the financial changes necessary to adapt the new system of taxation to the wants of the revenue. He restored the army to the nation by abolishing the sale of commissions (when the House of Lords blocked his bill) by the use of the royal warrant. He put an end to three hundred years of intolerance and injustice by disestablishing the Irish Church. It was his clarion voice which led to the uprising that secured their independence to Bulgaria, Servia, and Rumania, and delivered Bosnia and Herzegovina from the Moslem yoke, by preventing Disraeli from completely linking England with the Turk in 1877. As long as his vigor lasted, there was nobody in England who could stay the torrent of popular enthusiasm which burst forth whenever he touched the rock. In the course of sixty years, he changed his opinions several times, about the Church, about the franchise, about the Crimean War, about Ireland, but it was not till the home-rule period that he was accused of want of sincerity, and of interested motives. In short, he has stood, and stands to-day, before the masses in England, as the greatest English statesman since Cromwell, as the most remarkable combination of constructive capacity with debating powers the House of Commons has ever had.

We go over these things because we find, side by side with a fame of this sort, during the last ten years, in fact, ever since 1874, a completely different view of him among what are called the "upper classes" in England—that is, among persons connected with the army, among most of the rural clergy, among the whole sporting class, among persons who figure in fashionable society, as well as among those who are trying to figure in it, and among nearly all English living or sojourning in foreign countries. Nothing more surprises an American who has got his ideas of Gladstone from the newspapers and from literature, when he goes to a foreign watering-place, than to hear Gladstone always mentioned with derision, or contempt, or positive hatred, and to find this low opinion of him supported by attacks on his character, especially stories of gross immorality. Apparently refined women, often of middle age, will grow white with rage in speaking of him, and wish they could hear of his being hanged or dead. They will tell you with minuteness, as a notorious fact, of his being in the pay of the Jesuits, of his having long been secretly a Roman Catholic in good standing, of his having given large orders for things for which he could not pay, of his having left his wife on his way home from a dinner party, for a disreputable purpose. One of the best illustrative stories of this kind is of an old lady's having screamed with terror at a funeral, on hearing that Mr. Gladstone was coming, and having "hoped he would not make a disturbance." In fact, no ruffianly demagogue of any age has ever been depicted in darker colors than Mr. Gladstone in what is called English "society." It is very rarely that one can get from one of these vituperators a statement of what Gladstone has done to merit this obloquy. One lady, on being pressed on this point, about 1889, exclaimed, after some hesitation, "Look at the state of affairs in Afghanistan."

The class which started this view is probably a small one, mainly aristocratic and sporting, and connected with the army, but it has its representatives in every country house. Its hostility to Gladstone began with the abolition of purchase in the army, which, owing to the way it was done, as well as to its disregard of "vested rights," excited intense animosity. This feeling was further increased by his settlement of the *Alabama* question by arbitration, and by his refusal to keep fighting the Boers after Majuba Hill, by his opposition to Disraeli's Afghan war, and by his failure to rescue Gordon. These things made him accursed at every mess-table, and made him an "unspeakable one" to all the sisters, the cousins, and the aunts. After this came Irish home rule, in which he had, besides bearing the blame of an attempt to "dismember the Empire," to meet the dislike of the Celtic Irish which even the most enlightened English feel, and which the Irish Unionists helped to aggravate. Once it became the thing in "society" to hate Gladstone and abuse him, the work was done with a very large proportion of the well-to-do class. When one takes English society proper, and then takes, also, all who want to get into it, or be thought in it, we get the bulk of the people who give dinners and balls. The fierce hostility of the English travelling class whom one meets on the Continent in summer, and falls in with at such places as Pau and Florence in winter, is undoubtedly due, in a large number of cases at least, to the desire of people whose position at home is uncertain or unknown, to give the impression that they feel with the world of fashion, and, therefore, are probably part of it. And then we must not forget the influence of the Primrose League. For years in every "Habitation" the atrocities of Gladstone were the principal topic of conversation, and wishes for his untimely death the best mode of showing hostility to "atheism and anarchy."

The whole phenomenon would be one of the most melancholy in English history if it were not for Mr. Gladstone's splendid indifference to it all. We cannot recall anything approaching the proud and silent, not contempt, but disregard, with which he has treated it. He has over and over been insulted in large public assemblies; he has seen his name reviled in speeches and articles in terms which would hardly have been used about a criminal; he has heard himself ridiculed by men who, in a world of pure justice, would be employed in cleaning his boots, and yet we are not aware that he has ever taken the smallest notice of it. His silence has been almost majestic. No such illustration, we feel sure, is to be found in history of Wotton's picture of the man

> "Who hath his life from humors freed,
> Whose conscience is his strong retreat,
> Whose state can neither flatterers feed
> Nor ruin make accusers great."

THE DEDICATION OF THE YERKES OBSERVATORY.

AMHERST, November 8, 1897.

The installation of a huge telescope affords fitting occasion for recalling the state of astronomy before such instruments had been invented, for the progress of this science, more than any other, has always been closely associated with the development and application of mechanical processes and skill. Earlier than the seventeenth century the size of the planets could not be measured, none of their satellites except our moon were known, the phases of Mercury and Venus were merely conjectured, and accurate positions of sun, moon, and planets among the stars, and of the stars among themselves, were impossible—all because there were no telescopes. More than a half-century elapsed after the invention of the telescope before Picard combined it with a graduated circle in such a way that the measurement of angles was greatly improved. Then arose the necessity for accurate time; but, although Galileo had learned the principles governing the pendulum, astronomy had to wait for the mechanical genius of Huygens before a satisfactory clock was invented, about 1657. Nearly all the large reflecting telescopes ever built were constructed by astronomers who possessed also great facility in practical mechanics; and the rapid and significant advances in nearly all departments of astronomy during the last half-century would not have been possible except through the skill and patience of glass-makers, opticians, and instrument-builders, whose work has reached almost the limit of perfection.

Before 1860, if we except the meagre evidence from meteoric masses of stone and iron, some of which had actually been seen to fall, it is proper to say that our ignorance of the physical constitution of other worlds than ours was simply complete. The principles of spectrum analysis as formulated by Kirchhoff led the way to a knowledge of the elements composing every heavenly

body, no matter what its distance, provided only it is giving out light intense enough to reach our eyes. But since Newton, no necessary step had been taken along this road until the way to this signal discovery was paved by the deftness of Wollaston, who showed that light could not be analyzed unless first passed through a very narrow slit; and of Fraunhofer, the eminent German optician, who first mapped dark lines in the spectrum of the sun. So, too, in our own day, the power of telescope and spectroscope has been vastly extended by the optical skill and mechanical dexterity of the Clarks, Rowland, Hastings, and Brashear, all Americans.

The development of astronomy in America exhibits three distinct and epochal stages, the first a purely practical one, an inheritance from the mother country, embodying the application of astronomical methods to the settling of disputed boundaries. Mason and Dixon's line, run in 1763-67, is the most conspicuous instance. Rittenhouse had observed the transit of Venus in 1769, and Williams of Harvard the total eclipse of the sun in 1780, but no observatory was established for nearly a half-century to come. A second period opened during the first third of the present century with the building of a private observatory by Bond at Dorchester, and the inauguration of astronomical research for its own sake by the youthful and gifted Mason at Yale in 1835. The material resources of many institutions were greatly enhanced during this period, because of two extraordinary astronomical events—one the great comet of 1843, probably the greatest comet of all past time, and the other the discovery of the planet Neptune. The American Ephemeris and Nautical Almanac was founded, the National Observatory at Washington was built, and many institutions of learning were similarly equipped. In the main they have been devoted to research in exact astronomy, involving the application of mathematics to that science; and here it is that most excellent work has been accomplished—among a score of others, by Gilliss and Yarnall as trained observers, by Hubbard and Walker as expert calculators, and Hill and Newcomb as theoretical astronomers of the first order.

Nearly coincident with the civil war came the invention of a new instrument of research, the spectroscope, whose application to the problems of the universe and its constitution has changed the whole aspect of astronomical achievement, and opened a third era, unparalleled in scientific history. Especially prominent are the investigations of Young and Langley upon the sun, of Hough and Lowell upon the planets, of Brooks and Barnard upon comets, and of Draper and Pickering upon the stars. Vast has been the amplification of astronomy during the ensuing third of a century. Human interest has been enlisted more and more, because of the certain discovery that thousands upon thousands of the stars are duplicates of our own sun, and that some at least of our neighbor planets seem to be passing through cosmic stages similar to those which the earth itself experiences.

With all this widening of the astronomical horizon is impressed upon the investigator a consciousness that problems are arising faster than he can solve them. Great, then, is his joy when a new observatory is established, entering the astronomical fraternity equipped with splendid instruments, and manned with a corps of astronomers and physicists whose very names are guarantee of effective service.

Greatest of all events in this third era of American astronomy was the dedication last month of the Yerkes Observatory of the University of Chicago. Prof. Hale, its able director, arranged a programme without precedent, covering nearly an entire week, calling upon his fellow-astronomers for assistance in its execution. First there was a series of morning conferences on astronomical topics extending through four days, and all the better that they were felt to be less formal than association meetings. The most important discovery related was that of oxygen in the sun, its existence being proved beyond question by the research of Prof. Karl Runge of Hanover, who came to the dedication as an especial delegate of the German Government. France was represented by M. Henri Deslandres of Paris. Foreign institutions in other countries sent gratulatory cablegrams.

Prof. Hale did well to organize the conferences with an abundance of papers on purely physical topics; among them Hull of Colby talking on electric radiation, Crew of Evanston on the source of the characteristic spectrum of the metallic arc, and Humphreys of Charlottesville on wave-length as influenced by pressure. In astronomy, Comstock of Madison reported on his investigations of a possible lunar atmosphere; Hedrick of Georgetown exhibited plates taken with the photo-chronograph for doing away with personality in transit observations; Wadsworth, astrophysicist of the new Observatory, described a photographic meridian circle, and Poor of Johns Hopkins a new form of mirror for the reflecting telescope. The conferences, admirably planned and capitally executed, formed perhaps the most enjoyable feature of dedication week; they were, indeed, a veritable "love feast" of physics and astronomy. Afternoons were devoted to inspection of the splendid equipment of the great Observatory in every detail; and many novel demonstrations of exceeding interest were displayed, among them Mr. Brashear's optical surfaces and methods of testing them, and the grinding of a five-foot mirror actually in progress. Every one connected with the Observatory staff was assigned some part in the programme for edifying the scientific visitors; and unfavorable skies alone defeated evening exhibitions of the performance of the forty-inch telescope upon a selected list of test objects, by Profs. Burnham and Barnard.

From twenty-six eligible sites under consideration by the University, Williams Bay, on the shore of Lake Geneva, in the State of Wisconsin, was finally selected; and a lovely spot it is. Astronomically, too, all conditions appear most favorable for that region, and the activities of the new institution can hardly suffer because carried on at a distance of seventy-five miles from the huge city and the parent University. Special trains conveyed the Trustees, members of the congregation, and official guests of the University from Chicago to Williams Bay, under the especial guidance of President Harper, whose gracious vigor made him the ideal master of ceremonies. Some eight hundred in all availed themselves of this unique occasion, and the deft handling of so large a convocation displayed an executive capacity which few astronomers possess.

Under the great dome, nearly a hundred feet in diameter, all were gathered for the specific ceremony of dedication. Prof. Keeler of Allegheny delivered a comprehensive address on the "new astronomy"—more technically astrophysics—and its relations to other physical sciences, especially emphasizing the necessity for farther spectroscopic research upon sun and stars, which the new Observatory has ample equipment for prosecuting. Next came the culmination of the day's doings, when Mr. Yerkes stepped forward to express his complete satisfaction with these tangible evidences of five years' toil, and to hand over to the Board of Trustees the deeds of the entire property, practically all of which had been acquired at his charges. No benefactor of learning ever received, or could wish to receive, a warmer or more heartfelt and wholly spontaneous tribute than did Mr. Yerkes at that crowning moment. A unique situation it was—hundreds of people gathered under the sheltering arches of the vast dome, and beneath the piercing lens of the world's greatest telescope, all gratulant to the man whose well-directed munificence had provided the growing University with unsurpassed facilities for advancing knowledge of other worlds than ours. By force of sheer contrast one was minded of the famous event of 1840, when Sir William Herschel's huge telescope, no longer serviceable, was dismantled with formal ceremonies conducted by all the Herschels, "within the tube itself assembled."*

With impressive dignity President Harper then accepted this magnificent gift, on behalf of his faculty and the astronomic staff, outlining at the same time the history of its development, from the inception on October 2, 1892, when the doors of the University had been opened but three days. The policy of the new department, too, was distinctly set forth, the Observatory being closed to the general public, in order that the precious moments of the able scientific corps may not be frittered in unappreciated explanations to the merely curious. With this the dedication of the Observatory might have been expected to conclude, had not the lavish provision of Prof. Hale and the kindly hospitality of Mr. Yerkes and Dr. Harper contrived otherwise. Yet another day was given to inspection of the buildings of the University in Chicago itself, in particular of the Ryerson Physical Laboratory, where Prof. Michelson exhibited many novel effects in optics of his own devising; to a luncheon given by President and Mrs. Harper at their residence; to an able and entertaining address at the Kent Theatre by Prof. Newcomb, on the "Aspects of Modern Astronomy"; and, last of all, to a banquet by Mr. Yerkes in honor of the scientific visitors.

Prof. Newcomb's address was of that general character to be understanded of all, and he made telling allusions to the members of the Yerkes Observatory staff and their distinguishing astronomical achievements. One brief citation must suffice here:

"The most striking feature of the celebration may be the large amount of effort which it shows to be devoted to the cultivation of a field quite outside the ordinary range of human interest. A little more than two centuries ago, Huygens prefaced an account of his discoveries on the planet Saturn with the

*"We mustered fourteen," wrote Sir John to Sir William Hamilton, "but it would easily have held fourteen more."

remark that many, even among the learned, might think he had been devoting to things too distant to interest mankind an amount of study which would better have been devoted to subjects of more immediate concern. It must be admitted that this fear has not deterred succeeding astronomers from pursuing their studies. The enthusiastic students whom we see around us are only a detachment from an army of investigators who, in many parts of the world, are seeking to explore the mysteries of creation. . . . Neither the measurement of the earth, the making of maps, nor the aid of the navigator is the main object which the astronomers of to-day have in view. If they do not quite share the sentiment of that eminent mathematician who is said to have thanked God that his science was one which could not be prostituted to any useful purpose, they still know well that to keep utilitarian objects in view would only handicap them in their work. Consequently, they never ask in what way their science is going to benefit mankind. As the great captain of industry is moved by the love of wealth and the politician by the love of power, so the astronomer is moved by the love of knowledge for its own sake, and not for the sake of its application. He is proud to know that his science has been worth more to mankind than it has cost."

Prof. Newcomb then sketched the history of astronomy in America in outline, and rounded out his admirable address with pertinent suggestions which the administration of the Observatory can hardly fail to regard in securing that eminent success everywhere expected of it.

The complimentary banquet tendered by Mr. Yerkes concluded the ceremonial of a week prognostic of inestimable scientific good. Prof. Pickering spoke to the toast on the work of observatories, Prof. Harkness responded for the Government, Prof. Comstock for neighboring observatories, and Prof. Hale for the staff of the newly inaugurated institution. To the memory of Alvan Clark, whose masterpiece, the great 40-inch object glass, was borne to its resting-place in the telescope tube only a few weeks before his death, was drunk a toast proposed by President Harper, all standing in impressive silence. Mr. Yerkes announced again his expectation concerning the future of the Observatory and its work; depreeating personal jealousies, evincing a welcome breadth of view highly acceptable to the astronomers, and justifying the belief that, in the midst of the vast and energetic community which has especial pride in this distinguishing possession, future needs of the Observatory are not to remain unsatisfied.

DAVID P. TODD.

GAGNIÈRE'S DUCHESS OF BURGUNDY.

PARIS, November 4, 1897.

After Saint-Simon, after Dangeau, it seems as if there were not much more to say about the life of the Duchess of Burgundy at Versailles. This young princess, who died in the prime of her youth, who had conquered the heart of Louis XIV. by her grace and amiability, has, however, always been a favorite subject for those who study French history. The modern historical method has revived many subjects, by research and the publication of original documents; and the discovery of even a few letters of a famous historical character appears important. We are now in possession of many such documents on the family, the infancy, the youth of Marie Adélaïde of Savoy, on her marriage, on her life in France, and finally on her death.

The Countess Della Rocca published in 1864 the inedited 'Correspondence of the Duchess of Burgundy and of the Queen of Spain.' M. Gagnière has recently completed the work of the Countess, who published chiefly the letters of the Queen of Spain and neglected those of her sister, the Duchess. His volume contains 122 letters—one hundred written by Marie Adélaïde to her grandmother, Madame Royale (born Jeanne Baptiste de Nemours), thirteen written to her father, Victor Amadeus II., Duke of Savoy, one to her brother, the Prince of Piedmont, eight to her mother, Anne d'Orléans; the only remaining letters of a voluminous correspondence which has for ever disappeared. M. Gagnière has further used the diplomatic correspondence of the Ambassadors of Venice from 1696 to 1712, and has found in it details on the life of the Duchess of Burgundy at Versailles, given by men who were, above all, interested in telling the truth. He also found in Venice a relation of the marriage of the Duchess at Paris and of the festivities which followed the marriage, and a relation of the malady and death of the Dauphin.

Marie Jeanne Baptiste of Nemours was the daughter of Charles Amadeus of Savoy-Nemours, the chief of a branch of the House of Savoy which had long been established in France. She left Versailles to marry her cousin Charles Emanuel II. of Savoy. The union was not a happy one. The Prince neglected his wife, leading a very dissolute life; he died in 1675, leaving a son, Victor Amadeus, who may be considered as the true founder of the dynasty of Savoy. Madame Royale was a woman of strong will, and when Victor Amadeus came of age, he found it difficult to assume his independence. Louis XIV. chose a wife for him, Anne Marie d'Orléans, a handsome girl of fifteen years, daughter of Monsieur and of Henrietta of England (daughter of Charles I.), who had been brought up by the second wife of Monsieur, Charlotte Elizabeth of Bavaria, famous for her correspondence, which has made us so well acquainted with Versailles and with the Court of Louis XIV. When Annie Marie d'Orléans left France, she kept up for many years an active correspondence with the Palatine, as her mother-in-law is generally called, but this correspondence has been unfortunately destroyed or lost.

Anne d'Orléans had two children, but, as they were not boys, Victor Amadeus abandoned his wife and became entangled in a fatal liaison with Madame de Verrue. In 1692, after a war between France and Piedmont, one of the articles of peace stipulated a marriage between Marie Adélaïde of Savoy and the Duke of Burgundy, eldest son of the Dauphin. The Countess de Verrue, who had really been no better than a spy while she was the recognized mistress of the Duke, had to leave Piedmont; she had borne two natural children to the Duke, but he became reconciled with his wife, who bore him in 1697, to his great joy, a son, Victor Amadeus Philip, Prince of Piedmont. In 1701 Anne d'Orléans had another son, Charles Emanuel, the only one who lived and reigned.

The young Princess of Savoy had a very difficult part to play at the court of Louis XIV. The King of France considered the Duke of Savoy as a sort of vassal, and wished to assign him a part in all the complications of European politics. The Duchess of Burgundy had to win the favor of the all-powerful Madame de Maintenon. "The Duchess du Lude," she writes to her grandmother, "is come back to me, which fills me with joy, and it is quite true that Madame de Maintenon sees me as often as possible. I think I can assure you without flattering myself that these two ladies love me. . . . I do all you order me as to Madame de Maintenon. I have much friendship for her and trust in all her advice." People had expected to see in the young Princess a semi-savage *Savoyard* (the word Savoyard is still used among the French as the equivalent of a boor); they were agreeably surprised to find her a clever, pretty, and amiable person. The Duchess very soon became mistress of the heart of the King and of Madame de Maintenon. "Those who love me as you do, my dear grandmamma, have often reason to rejoice at all the kindness of the King towards me, as he gives me marks of it every day."

Barcelona, besieged by Vendôme by land and by Admiral d'Estrées, capitulated on August 8, 1697, after a glorous defence by the Spaniards. "I have had great joy in the taking of Barcelona, my dear grandmamma, for I am a good Frenchwoman [*bonne Française*], and I feel everything that can give pleasure to the King, to whom I am as attached as you can wish." I have often marvelled at the rapidity with which princesses married out of their country can change their patriotism. In reality Marie Adélaïde merely meant to stand well with the King, and she always remained a Savoyard at heart. The winter season of 1698 was very brilliant at Fontainebleau and at Versailles; the young Princess was its queen. The King would have her in his rooms every night. "I have a good friend," she wrote, "in Madame de Maintenon, and it will not be her fault if I am not perfectly happy." The Duke of Burgundy, who was shy and timid, conceived for her a passion which ended only with his life. Marie Adélaïde became a sort of idol in the Court; her time was so much occupied with amusements that she had little left for her correspondence; her letters to her grandmother become more and more formal and brief as time goes on.

In 1702 the Duke of Burgundy left for the army in Flanders. The King took great precautions to prevent the Prince from communicating at Cambrai with his former preceptor, Fénelon, who had fallen from grace, but the young Prince succeeded in seeing him for a moment, and embraced him with much emotion. Fénelon had intended to make of him a model King, and had discussed with him great plans of reform. The correspondence of Marie Adélaïde gives us no details on the campaign in which the Duke of Burgundy played a very subordinate part. In 1703 the rupture between France and Savoy became definitive, and till 1713 the two countries remained bitterly hostile to each other. The part of the Duchess of Burgundy became very difficult; in her letters to her family she speaks only (and in very laconic terms) of the French victories, never of the French defeats; she was too prudent to expose herself to the anger of Louis XIV. and of Madame de Maintenon. Speaking of the battle of Höchstädt, gained September 20, 1703, by the Elector of Bavaria over the Imperialists, she says: "We have another reason to rejoice, my dear grandmother, in the battle which the Elector of Bavaria has gained over

Count Styrum. I do not doubt that you already have the details of it, and I will say no more." This was not very compromising.

On the 25th of June, 1704, she had her first son, the Duke of Brittany; the King and Madame de Maintenon were with her all the time. The child died in convulsions on the 12th of April; the Princess was overwhelmed with sorrow. She had soon other troubles; the siege of Turin, the flight of her family to Genoa, the dangers which her father incurred with Prince Eugène in their struggle against her uncle, the Duke d'Orléans, kept her in a constant state of anxiety. "We all need great courage," she says, "to bear such violent pains as we have suffered for some time." Her father became very ill at Embrun during a march on Toulon, and was abandoned by his own generals. The Duchess had a second Duke of Brittany, on the 8th of January, 1706, as frail as the first, and destined not to live.

The Duke of Burgundy was in Flanders with Vendôme, who did all he could to destroy him in the King's estimation, in the interest of the King's bastards. He had to be the witness of great military misfortunes and to assume great responsibilities without having any real powers. Vendôme went so far as to accuse the King's grandson of cowardice. The Duke of Burgundy bore everything with Christian fortitude. The unfortunate Duchess had to take up his defence. She was herself accused by the friends of Vendôme of having spoken ill of various members of the royal family, and was obliged to beg Mme. de Maintenon to protect her against them. There are some curious letters on these delicate subjects in a very rare volume published in 1822 by Firmin-Didot: 'Lettres de Louis XIV. à Madame de Maintenon imprimées pour MM. les Bibliophiles Français.' In one of the letters in this volume, written by the Duke of Burgundy from the camp of Lovendeghem August 27, 1703, to Mme. de Maintenon, he says: "It will be for you, Madame, when I see you, to enlighten me further, that I may take proper precautions lest the Duchess of Burgundy fall into infinitely dangerous snares. . . . Her mind is very deficient in what is called *esprit de femme*. She has a solid intellect, much good sense, an excellent and very noble heart; but you know her better than I do, and the portrait is useless." You can read in these lines the great affection which the Duke entertained for his wife. The influence of Mme. de Maintenon is very perceptible in the letters which the Duchess writes in the years 1708, 1709; her style is better, the expression of her ideas becomes more elegant. Mme. de Maintenon was an admirable letter-writer, and she was the real teacher of the Savoyard Princess. The Duchess, in those troubled years, had but one desire, peace; she grieved to have France and her country at war. Her husband had not revealed himself a great general. Her health became very delicate; she had another child in 1710, the Duke d'Anjou, who became later Louis XV.

The Duchess died February 13, 1712, after a seven-days' illness. The Duke could not be with her in her last moments; he had taken his wife's illness and died himself on February 18. Their son, the Duke of Brittany, followed them a few days afterwards to Saint-Denis. The Duke d'Anjou escaped only because his governess, the Duchess de Ventadour, refused to have him cared for by the doctors. People spoke of poison, and went so far as to accuse the Duke d'Orléans; it is well known now that the Dauphin, his wife, and their child were the victims of a virulent disease. The best proof of the innocence of the Duke d'Orléans is the care which he took as Regent of the young Louis XV.

THE RAWLINSON MSS. IN THE BODLEIAN LIBRARY.—II.

LONDON, October, 1897.

MASON, Capt. John: *v.* New Hampshire.

Conveyance to him of New Hampshire; 7 Nov. 1629 (*copy*), C. 379 1. —— 22 Apr. 1635, *ib.* 20. Report of the attorney general upon his title; 8 Nov. 1660 (*copy*), *ib.* 5b. Notes on his settlement, *ib.* 12b.

MASSACHUSETTS, Province of.

YOUNG, Capt. John. Letter to Col. John Scott; Boston, N. E., 12 June, 1663, A. 175. 116.

Correspondence.

THE RUSSIAN CENSORSHIP.

TO THE EDITOR OF THE NATION:

SIR: Referring to Mr. G. Dock's letter (*Nation*, No. 1686, p. 318), I am able to give very positive evidence. A high official

of the Russian Censorship told me some time ago that M. Leroy-Beaulieu's 'L'Empire des Tsars' was indeed prohibited in Russia; the entire works of Renan and of Zola share the same fate. But, he added, no respectable person or student who appeals to our office for permission to purchase such works meets with refusal. The case is, in fact, quite analogous to that of the works prohibited by the Catholic Church: any Roman Catholic who, pursuing serious aims, wishes to read Renan's 'Vie de Jésus,' is sure to get the necessary authorization from his spiritual guides. It is a fact of daily experience.—Truly yours,

SALOMON REINACH.

CHÂTEAU DE ST. GERMAIN-EN-LAYE,
October 30, 1897.

Notes.

Dr. Isidore Singer purposes editing in twelve quarto volumes, with the "collaboration of more than two hundred of the most illustrious Jewish and Christian scholars," an 'Encyclopædia of the History and Mental Evolution of the Jewish Race.' There will be about 2,000 illustrations. Dr. Singer may be addressed at No. 7-11 New Chambers Street, New York.

One of the early abolitionists (as a Covenanter, an abolitionist *ex officio*), the Rev. N. R. Johnston, is about to publish his reminiscences, under the title 'Looking Back from the Sunset Land; or, People Worth Knowing.' It will make a volume of several hundred pages, with illustrations. Mr. Johnston's address is No. 1024 East Thirtieth Street, Oakland, California.

The New Amsterdam Book Co. announces 'The New Fiction, and Other Essays on Literary Subjects,' by H. D. Traill.

Thomas Whittaker will add to his "Theological Educator" series 'The Ritschlian Theology and the Evangelical Faith,' by Prof. James Orr.

New Mexico has several sorts of landscapes and many sorts of people. 'For the Love of Tonita, and Other Tales of the Mesas,' by Charles Fleming Embree (Chicago: H. S. Stone & Co.), well enough depicts one landscape-type—the one which soonest impresses the visitor by rail; but his stories are hardly racy of the soil. His local characters are other people moving among the mesas. New Mexican Mexicans, cowboys, "holdups," French exiles, and "tenderfeet" do not in life all talk off the same cylinder; and the author's medium for their speech is not New Mexican of any complexion. The Mexican girl, in whose little world such class distinctions are absolutely unknown, does not break her heart over a "taint" of Indian blood. Such cowboys and stage-robbers as are Mr. Embree's would be, amid New Mexico, strangers in a strange land. His characters are not uninteresting, but they would do just as well anywhere else—and, in many lands, better.

While it is well known to all students of modern mathematics that the ancient problems of squaring the circle, duplicating the cube, and trisecting any angle admit of no solution by elementary geometry, the great mass of teachers either are unaware of this fact, or are unfamiliar with the nature of the proof. It was on this account that Prof. Klein of Göttingen gave a series of lectures upon the subject, in 1894, which appeared the following year under the title 'Vorträge über ausgewählte Fragen der Elementargeometrie.' So immediate was the recognition of the value of this little work that it appeared in French last year, and soon after in Italian. It is gratifying to learn that its appearance in English is the result of its appreciation in America. The translation ('Famous Problems in Elementary Geometry'), by Profs. Beman and Smith (Boston: Ginn & Co.), is felicitous, and in general appearance the book is decidedly superior to the German, French, and Italian editions. Certainly no teacher of geometry can afford to be without this treatise, which has attracted such universal attention since the publication of the German edition.

The Selden Society sends out vol. ii. of 'Select Pleas in the Court of Admiralty,' edited by Mr. Marsden, and dealing with the years 1547-1602, a period highly important both to the jurisdiction of the court and to many doctrines of English law. The materials here contained for the history of the law of insurance, bottomry, prize, contraband, neutral rights, salvage, wreck, conflict of laws, carriers, and commercial law generally, are novel and interesting. The question of May *vs.* Burdett, in 1846, "Is a monkey a dangerous animal?" was before the Admiralty Court in 1642 (lxxxii.). The traditional phrase "act of God" appears in these records as "so pleased God" or "the hand of God" (lxxxi.). In the fourteenth century the common-law courts had no jurisdiction to redress a tort committed abroad or a breach of a charter party made abroad (xliii.). The history of the harsh old doctrine that wrecked goods were divested from their owner is here traced (xxxix.). There was a time when the right to contract with a salvor for his reward was disputed by officials greedy of fees (xxxvii.). The important part taken by Italians, Dutch, and other foreigners in teaching the methods and legal ideas of modern commerce to the then relatively unenlightened English is illustrated by the frequency of foreign names in the commercial litigation. The history of the rule of division of loss (a specialty of Mr. Marsden's) is given on p. lxxxiii. The giving to ships such names as *Jesus, The Saviour, Holy Ghost, Angel Gabriel, Blessing of God, Virgin Mary* suggests something of the different attitude towards religion which then prevailed. What with the sidelights upon the Armada, the Guelphs and the Ghibellines, Hawkins the sea-fighter, Drake, Walsingham, and others, the pages have an interest for every student of history.

The Hallowell Co. of Philadelphia has issued a compact volume of 270 pages prepared by Major H. C. Groome, Adjutant-General of the First Brigade of the Pennsylvania National Guard, which has been officially recommended for the guidance of the troops of that State. Without claim to originality, the author has so ably condensed the numerous existing works on military organization, discipline, topography, sketching, the care of the health, firing, signalling, etc., etc., as to make his volume a veritable Baedeker to the duties of the citizen soldier, of value to militiamen in every State because of its comprehensiveness and reliability.

The attention of those seeking a more intimate acquaintance with seventeenth-century France should be called to a sumptuous volume in small folio by Émile Bourgeois of the École Normale Supérieure: 'Le Grand Siècle: Louis XIV. Les Arts; Les Idées' (Paris: Hachette). The text is in the main taken from the second half of Voltaire's 'Siècle de Louis XIV.' (beginning in chap. xxv., p. 283, Garnier's edition), supplemented by extracts from Saint-Simon, Mme. de Sévigné, La Bruyère, and others. But the value of the book consists more especially in the exquisite illustrations, six to seven hundred in number, derived from many public and private sources. They represent men and women, buildings and gardens, interiors, specimens of furniture, articles of luxury and utility, costumes, scenes from life, etc., and furnish in their ensemble a genuine tableau of the age.

We have to record the testimony of a distinguished and experienced specialist for nervous diseases as unequivocally in favor of the higher education for women. Dr. Otto Dornblüth, in 'Die Geistigen Fähigkeiten der Frau' (Rostock: Werther), partly invalidates the contrary opinions of certain university professors cited in 'Die Akademische Frau,' which we noticed a year ago. While contributing little that is new to the question—which, it seems, will not be allowed to rest till the battle is won in Germany as well as here—he disposes of several objections with such calm assurance and impartiality that the very tone of the treatise, coming from such a source, seems to augur well for the future.

Angelo Mosso's 'Fisiologia dell' Uomo sulle Alpi' (Milan: Treves) is an interesting series of studies made on Monte Rosa, showing the effects of high altitudes on the muscles, respiration, the action of the heart, the circulation of the blood, the brain, the nervous system, respiration, digestion, and the bodily organs and functions generally. The work is well written and profusely illustrated.

Paolo Luotto's elaborate work, entitled 'Il Vero Savonarola ed il Savonarolo di L. Pastor' (Florence: Le Monnier), is a thorough exposure of the ignorance and prejudice shown by L. Pastor in his account of the character and career of the Florentine reformer in the third volume of his 'Storia dei Papi dalla Fine del Medio Evo.' The vindication is admirable in spirit and most convincing in its allegations of fact. The author is evidently animated, not by the love of controversy, but by a sincere regard for historical truth and a strong sense of justice.

After a full year's delay comes the second of the costly fascicules of the 'Codice Diplomatico Dantesco,' prepared by Biagi and Passerini, under the auspices of the Italian Dante Society. The third, fourth, and fifth fascicules are in press. All four are taken up with the reproduction, both in print and by photograph, of the portions of the Florentine records that concern Dante's share in politics. It is interesting to notice that, of these ten documents, eight have come to light within the last twenty years, and two have been quite recently discovered by the editors—both in a volume of the records which previous investigators had searched, and one on the very page on which a previous find had been made.

We have received from the British Museum an excerpt from its General Catalogue embracing its Shaksperiana — 'Catalogue of Printed Books: Shakespeare (William).' It is a small folio of 232 columns on half as many pages, and the catchword throughout is Shakespeare, with references to the re-

spective authors and editors. This, apart from the entire Catalogue, would impede research more than it does if it were not for a table of contents for the classification, and an index to the several plays. Even so, it is not quite clear why, under Concordances and Dictionaries, the entry should be, "*See* BARTLETT (J.), A New and Complete Concordance," etc., while the same author's 'Phrase-book' is entered without the preliminary reference, a full column below, among works equally amenable to author-entry. The appendix consists of Biography, Bibliography, Criticism, Bacon Controversy, Collier Controversy, Ireland Forgeries, Pictorial Illustrations, Anniversary and Centenary Celebrations, Miscellaneous. We are not informed to what an extent this separate publication from the General Catalogue has been or is proposed to be carried, but the utility of the scheme is obvious, and every library should desire to procure these brochures as an addition to its resources.

Of like character with their Ian Maclaren Calendar is Dodd, Mead & Co.'s Shakspere Calendar for 1898, compiled by two ladies and well illustrated by a third. The general appearance is elegant.

To his numerous calendars for the present season R. H. Russell, New York, adds in four sheets one containing as many cartoons by Frederic Remington—drawings from that Western and Southwestern field which he has so conspicuously made his own. These mounted Indians, in civilized and savage attire, seem to us among the best of the products of this artist's prolific pencil.

The first number of *Literature*, bearing in this country the imprint of the Harpers, does not offend by thundering in the index—unless the clatter of the hoofs of the steeds in Mr. Kipling's poem, "White Horses," be taken for thunder. Apart from this poem, and Mr. Birrell's not very striking paper on criticism, this initial number has no showy bid to make for public favor. All the better and more promising for that, will be the verdict of the sensible, who will see in the book-notices an earnest of sober work and a fulfilment of the pledges made in behalf of the new weekly. One slight awkwardness in the taking over of the English sheets appears on p. 26, where it is stated that the advertising pages number 32—the real number in the American edition being 9.

In the *American Historical Review* for October a good theme, "The Development of the Love of Romantic Scenery in America," is rather inconclusively treated by Mary E. Woolley. Nevertheless, her diligent search in journals and books of travel during the seventeenth and eighteenth centuries in particular will probably deter other investigators from going over the same barren field. Suggestive, rather than authoritative, is the paper by George H. Haynes on "The Causes of Know-nothing Success in Massachusetts." As a panic movement, Know-nothingism must be set beside the silver craze, and even beside protectionism (with its more selfish admixture). In Massachusetts it broke up the old political order, to which the Whigs had given a respectability almost aristocratic, at a moment when the Whig party was disappearing for want of something which is better than respectability—courage and independent principle. On the main and already absorbing national question of slavery, the Know-nothings had no advantage in these qualities over the Whigs; and that "two-handed engine at the door" had only to smite once to put an end to both of them. The *Review* contains also a posthumous chapter on the Prussian campaign of 1758, by the late Prof. Herbert L. Tuttle, and a decisive review of the legend of the invention of the cotton gin, prefatory to some interesting correspondence on the subject between Eli Whitney, his family, and associates.

In the last two issues of the *Boletin de la Sociedad Geográfica de Lima* (vol. vi, trimestre 4, and vol. vii, trimestre 1), the publication of the transactions of this vigorous young society is brought up to June, 1897. The President, Dr. Luis Carranza, reviews the work accomplished during the year 1896, which has been very important. Committees appointed to study the effect of high altitudes upon the human organism have been investigating the respiration, chest measurements, condition of the blood, etc., of indigenes and others, and will report within the year. Señor Balta has undertaken geological investigations in Carabaya, the centre of recent activity in gold-mining, with the result so far that he has discovered graptolites and other fossils indicative of Lower Silurian, and possibly Cambrian, age, pushing the geological history of Peru farther back than was previously known or expected. The institution of Geographical Centres, or branches of the main body in Lima, is a new feature, which is apparently yielding excellent results. Centres have been established in Piura, Tarma, Cuzco, and Arequipa (Dr. Bailey, Director of the Harvard Observatory at that point, being its chairman), and another is contemplated at Puno, which will naturally contribute observations on the geography, climatology, and archæology of Lake Titicaca. The intellectual stimulus of these centres is said to be very great, and already a number of valuable papers have been thus called forth, which are reproduced in the Bulletins.

The ethnological and linguistic section of the Society has been peculiarly active, among the papers in the two last numbers of the *Boletin* being "The Root *Chi* in Various American Languages," by Dr. Pablo Patrón; "Vocabulary of the Campas Tribes," by D. Eulogio Delgado; "Characters of the American Languages and of the Keshua in Particular," by Dr. Leonardo Villar; and "The Sumu Indians of Nicaragua," by Courtenay DeKalb. The continuation of Raimondi's Itinerary should be noted, as also a valuable account from all points of view of the Province of Huánuco, by a well-informed writer who conceals his identity. It is regrettable that the Society has lost its Government subsidy of 2,400 *soles* a year, which will considerably restrict its opportunities for usefulness, for a time at least.

The public mind in Germany has been intensely excited by the unusual number of railroad accidents that have occurred during the past summer in different parts of the Empire. According to official statistics, there were in the month of July alone 226 accidents, resulting in the death of 60 and the more or less severe injury of 154 persons. This would give an average of one accident to 110 miles of track. This deplorable state of things is due to an inopportune spirit of economy, which leads the administration to employ common workmen as brakemen, and stokers as engineers, because they are cheaper. That this parsimony is wholly unnecessary is evident from the fact that the railroads turn into the treasury a yearly surplus of more than 400,000,000 marks. It is also true that no expense is spared in order to insure the safety of royal and imperial trains, and this circumstance adds to the popular indignation.

The recent first appearance of a comedy by the Norwegian dramatist Gunnar Heiberg, best known as the author of "King Midas," was, according to Christiania papers, accompanied by disorders of the most violent kind. The play is entitled "Folkeraadet [The People's Council or Parliament]," and is a keen satire on modern parliamentary methods in Norway. Tin horns were freely used by the indignant supporters of legislative government "as she is practised," and the author's appearance on the stage was greeted with an enthusiasm that would have been more flattering had its motives been less mixed. As a work of literature, "The People's Council" is reported as being disappointing, not approaching in force of characterization the earlier drama.

The American publishers of Gadow's 'In Northern Spain,' reviewed in our last issue, are, as we should have noted, the Macmillan Co.

—For the second time, Mr. Thomas Bailey Aldrich has the distinction of a uniform edition of his Writings—now called "The Riverside Edition," and in eight volumes, of which two are of verse (Houghton, Mifflin & Co.). In form and workmanship they should satisfy any genuine literary ambition, and, so far as the poetry is concerned, it includes all that Mr. Aldrich wishes to be associated with his name, plus the customary pieces in which the public's judgment has overruled the maker's, and which cannot well be withdrawn. Such a fate is almost inevitable even for those who, as Mr. Aldrich says in one of his quatrains, with a personal application if not intent, strive that "the diamond with its own rich dust Be cut and polished." Mr. Aldrich being, as his two portraits from recent photographs by Cox show him to be, still well preserved, it cannot be thought that we have here a definitive assembling of his literary productions. But were it so, the mere bulk of these would place him first in the line of succession to Emerson, Lowell, and Holmes, to say nothing of Longfellow and Whittier, whose prose was disproportionate to their verse. The muse, whether of Bret Harte or of Mr. Howells, is too attenuated to admit them to the contest for the American laureateship, while Mr. Aldrich's nearer rivals either shine in verse alone or have not aggregated so large a prose output. Whatever opinion may be held as to the true heir apparent of the worthies named, and as to the measure of the gulf between him and them, no one can peruse Mr. Aldrich's poems without being struck with the fact that he belongs to a new generation, with scarcely a feather's weight of the moral burden of the bards of the forties. The initiated may read this to a nicety in the "Monody on the Death of Wendell Phillips," and in the "Shaw Memorial Ode" with which the second volume concludes; pure artifice, we are tempted to say. It is not without significance that, but for Bret Harte and his Heathen Chinee, not a single one of the poets now nearest the front in years and in the quality of their work figures in the final edition (1891) of Bartlett's 'Familiar Quotations.'

—A sumptuous large quarto (Edward Arnold), by Mr. Albert Hartshorne, Fellow of the Society of Antiquaries, deals with a neglected subject, 'Old English Glasses.' Not content with giving the first account of glass drinking-vessels in England from early times to the end of the eighteenth century, Mr. Hartshorne also sketches, by way of introduction, the vicissitudes of the making of glasses on the Continent—a topic not hitherto dealt with in English. The documentary evidence on which this work is based fills many pertinent footnotes, and occupies a most ample appendix, while the actual glasses figured require 366 cuts, showing their subjects usually at one-third of the original size, and 67 full-sized plates in lithography. Of the beauty of these last, which are veritable facsimiles of the originals, too much can hardly be said. It is possible, Mr. Hartshorne thinks, that Roman glass was actually made in Britain, but this is more problematical than the equally disputed production there of rude glass vessels in Anglo-Saxon times. Several specimens found since 1851 are figured, and it is made out that they can hardly have been imported. Still, no artistically beautiful glasses were made in England, apparently, until the sixteenth century. Three post-Roman glasses which are pictured class themselves as Merovingian, and were made probably on the upper Rhine. Later on, the choice glasses were Oriental or Venetian, and finally Flemish. A beautiful Oriental cup known as the "Luck of Edenhall," is figured, and the striking legend connected with its name is given by our author.

—The renaissance of glass-making in England, brought about by workmen from Venice, whose sojourn lasted from 1549 to 1551, was the beginning of better things. Verzelini came a little later, and then gentlemen glassmakers from Normandy and Lorraine, but the real creator of English glass-making was Vice-Admiral Sir Robert Mansell, who embarked capital in glass-making, employed able men like James Howell in his enterprise, and made various technical improvements. When Mansell died it was becoming impossible to ignore English glass-making, and no Frenchman could longer maintain that the English drank "out of their boots." In his ninth chapter, Mr. Hartshorne examines the household inventories of Lord William Howard, Dorothy Dame Shirley, and many others. So curious and startling are the glimpses which he thus gains into the privacies of seventeenth-century life that he more than justifies, even for the untechnical reader, his minute antiquarian study of glasses. The eighteenth century remains. Here documents are few and insignificant, but the actual number and variety of glasses is enormous. One of the master strokes in the work is the clear and convincing classification of eighteenth-century glasses. Mr. Hartshorne, in establishing these sixteen classes, has made a very solid contribution to the scientific study of his topic. Still, the untechnical reader will be more competent to appreciate the chapter on Jacobite glasses. This chapter is full of the most curious and entertaining matter, and cannot fail to delight all who care for picturesque and eccentric historical details.

—It is now more than fifty years since Antoine Frédéric Ozanam published his examination of the philosophy of Dante, viewed in its connections with scholastic philosophy in general. The success of the book, 'Dante et la Philosophie catholique au 13me siècle,' as it is called, was immediate, and several French editions of it appeared. It was further soon translated into Italian and into German. Ozanam's position as a protagonist of romantic Neo-Catholicism gave it a wide public; and his really broad and deep scholarship gave it authority even among those very remote from his religious views. It became at once the recognized source of information in regard to Dante's philosophy and theology; and its genuine value is proved by the fact that, in spite of the remarkable activity of Dante students in the past two generations, no one has succeeded in superseding it. Many details of Dante's intellectual obligations both to the ancients and to his scholastic predecessors have been cleared up of late years, but the general results obtained by Ozanam have remained unshaken. And it may still be said that every serious student of the poet must keep Ozanam constantly in his hands. This being so, it is remarkable that in England and America, both countries whose higher life in our century has been profoundly affected by the study of Dante, no translation of Ozanam's work should have appeared. Even if students proper found the French form better suited to their wants, one would suppose that the widespread popular study of the 'Divine Comedy' would have caused the need of such a book to be felt and supplied. Indeed, treatises far inferior in every way have met with a considerable sale. The fact remains, however, that until now the English student of Dante who reads French with difficulty or not at all, has had to do without this aid. It is a real service, then, that Mrs. Lucia D. Pychowska has done for the diffusion of a sound knowledge of the poet in her version from the French of this valuable book (New York: The Cathedral Library Association). Obviously engaged with a labor of love, she has made a translation which is at once readable and generally faithful to the original. Some perplexity in the rendering of the subtleties of scholastic terminology we have observed here and there, but little that is really misleading to the reader. Our only serious regret is that careless proof-reading of the notes has left a good many references inexact.

—*Science* reprints the concluding portion of the address on "Improvident Civilization" which was given at Detroit by the Vice-President of the Social and Economic Science Section of the American Association for the Advancement of Science. In this it is urged that the time is ripe for at least making a beginning towards obviating that extremely improvident feature of existing civilization—the diversity of languages that exists between the great nations of the world. The amount of labor that is entailed in all matters of commerce and of learning by this diversity is only too obviously a thing to be deplored; the interesting point is that, from the action taken by the above-named body at the close of the address, it is considered by a respectable number of learned men that there is a possibility of diminishing it, without waiting for the time when one nation shall have swallowed up all others by way of conquest. The plan proposed is that the important countries should fix upon some one language to be used as an alternate language; that the study of this language (together with the native language of the country) should be made compulsory in schools, and that all documents for interlingual use, such as passports, navigation charts, and astronomical codes, postage stamps, money orders, letters of credit, coins, tables of metric systems, and various other things, should be inscribed in both media. This would form a beginning which might be expected to lead to important consequences. The work of the world is becoming daily more and more international and interlingual; for scientific purposes no less than for commerce the urgent need for a common code of communication is sure to be more and more strongly felt; and once the chosen language were fixed upon, it could be trusted to make rapid strides towards adoption.

—If the Germans had already shown so much feeling for international solidarity (or for the plain dictates of good sense) as to be willing to give up their black-letter text, more might be hoped from them in the way of adopting a secondary language other than their own. But it is well known that Bismarck, at the time when his word was law, pronounced forcibly against a change which was already making much headway, on account of his desire to foster an enthusiasm for everything of a national character. It was only the scientific people who were able to hold out against this strong pressure, and it is chiefly scientific books that are to-day printed in Germany in Roman text. The scientific people, with their overwhelming accumulation of printed matter, and with the interest which they already take in the promotion of uniformity in classification and nomenclature, must be depended upon to start this most revolutionary reform, if it is to be started at all.

THE MYCENÆAN AGE.

The Mycenæan Age: A Study of the Monuments and Culture of pre-Homeric Greece. By Dr. Chrestos Tsountas and Prof. J. Irving Manatt. With an introduction by Dr. Dörpfeld. Boston: Houghton, Mifflin & Co. 1897. Pp. xxxi, 417. $6.

Of the two authors of this book, Professor Manatt of Brown University is known as a most enthusiastic student of all that pertains to Greece, and his four years' residence in that country as United States Consul during Mr. Harrison's Administration gave him excellent opportunities which were well used for acquiring familiarity with the objects of which the book treats. His style is facile and picturesque. To Tsountas, however, belongs the lion's share of the credit for the learning of the work. Of all men he is best qualified to write of the Mycenæan Age. Not only is he an erudite scholar, but for ten years he has conducted in person the most important excavations having to do with prehistoric civilization in Greece. His name has come to stand by the side of those of Schliemann and Dörpfeld, and many look upon him as already designated to succeed Kabbadias as Ephor-General of Antiquities for the Kingdom of Greece.

The basis of this work is Tsountas's Μυκῆναι καὶ Μυκηναῖος Πολιτισμός (Mycenæ and Mycenæan Civilization), published in 1893, which, being written in modern Greek, was sealed not only to the general reader but also to many archæologists, while its plan was unsatisfactory, having been

modified in the course of its composition. This book was translated into English by Dr. Newhall, and then revised, rearranged, and in part rewritten by Dr. Manatt, with large amplifications and supplements, to which the original author contributed. The rearrangement and new division of topics has been well done, and the improvement in the book is great, but of course the reader cannot tell how much of the new material was furnished by Tsountas, except as he is informed that Tsountas wrote the new chapter on Mycenæan writing, and his colaborer that on the Mycenæan World and Homer. The uncertainty of source is increased since the Greek author is sometimes referred to by name, while at other times he speaks of his discoveries with the editorial "we," in which the American author is not included. The new illustrations are many, important, and good, although the "half-tone" figures of Mycenæan gems are unsatisfactory, and in some of the plans the lettering is indistinct. One or two of Chipiez's restorations might well have been added.

Classical scholars, archæologists, and all educated readers will welcome this clear and readable account of what is now known of the early civilization of Greece. During the last quarter of a century, excavations have brought to light a great mass of facts with regard to the life of the people in Greece, the Greek islands, and the northwestern corner of Asia Minor, near the close of the second millennium before Christ, but hitherto no satisfactory and comprehensive statement of these facts has been made in English. To the cosmopolitan Schliemann we owe the foundations for the "science of the spade"; but for his work at Hissarlik and Mycenæ, the Germans might not have excavated the site of Olympia, nor the Americans that of the Argive Heræum, nor would the French now be digging at Delphi. Schliemann, however, was himself far from scientific in his early work, although, urged by unbounded enthusiasm and guided by like confidence in the Homeric poems, his efforts were crowned with success. At first, naturally enough, he did not appreciate better than others the nature and difficulty of his task, and thought to settle the question of the site of Homeric Troy by scratching the ground for a few days with the mattocks of a half-dozen laborers, without carts or barrows, on the hill where twenty years later he had three tram-roads to carry off the dirt dug by his men. Thus his reports of his excavations, though published with most praiseworthy promptness, were not exact and clear until he secured the assistance of Dörpfeld for the work at Tiryns and later for Troy. The endeavor to obtain from Schliemann's first three books a clear idea of what had been done and found (except in the way of treasure and vases) at Hissarlik, was a maddening task, and these books have now no value for the general reader, and only historical interest for the archæologist.

With all his success Schliemann sometimes blundered, and his opinions erred; he destroyed important structures at Hissarlik because they seemed to be in the way of his finding Homeric Troy; he was not thorough in his examination of the mound raised over the ashes of the Greek warriors at Marathon, and supposed that he had proved it not to be what it really was; he would have abandoned the excavation of the pit-graves in the circular enclosure at Mycenæ in which the great treasures of Mycenæan wealth were found (Tsountas says in a note in his original work), if it had not been for the urgency of the Greek Ephor; he believed to the day of his death that the Homeric Troy was the second stratum from the virgin soil at Hissarlik, while Dörpfeld found, after only a little additional and independent work, that the sixth layer presented unmistakable indications of a civilization akin to that at Mycenæ, and hence was the city for which Schliemann had looked for more than a score of years.

In 1889 Dr. Schuchhardt made an excellent book, with many plates and cuts, on Schliemann's excavations, which was well translated into English by Miss Sellers two years later; but while to some extent Schuchhardt illustrated Schliemann's discoveries by comparisons from other fields, his book was far from being a systematic presentation of what was known about the civilization of the Mycenæan age, but rather, as its title declared to be its aim, discussed successively Schliemann's different excavations. In 1892 Prof. Percy Gardner of Oxford published a book entitled 'New Chapters in Greek History,' valuable and suggestive, but intended only "to give a rough outline" of the "historical results of recent excavations in Greece and Asia Minor." He wrote on Phrygia and Troas, Mycenæ and the Islands, the palace at Tiryns, recent discoveries and the Homeric poems, ancient Cyprus, Naucratis and the Greeks in Egypt, etc., but did not undertake to paint a picture of the life in prehistoric Greece. The discussion of Hissarlik as the site of Homeric Troy lay then of course still under the influence of the view that the second or burned city was the Homeric Troy, and the author naturally found great difficulty in connecting the remains of (perhaps) 2000 B. C. with the much later and more highly developed civilization of Mycenæ. He thought the kings of Mycenæ might have been of Phrygian extraction, but even then "Agamemnon would be as truly Greek as George III. was English." With good reason he supposed the Dorian invasion of Peloponnesus (about 1100 B. C.) to have been a slow process instead of a sudden incursion.

During the five years since Gardner's 'New Chapters' appeared, continued discussions and excavations have done much toward the solution of vexed problems. After the exposition in 'The Mycenæan Age,' few will doubt that the civilization here set forth is that of Greeks, and that its art was native, and, though under the influence of the art of Egypt and the East, not dominated by these. That the people who bore this civilization had wealth and power in Bœotia, Attica, Argolis, Sparta, the Greek islands, Crete, and near the Hellespont in Asia Minor, is certain. That Mycenæ seems to be the centre of this civilization agrees well with the saying of Homer that Agamemnon was "king over many islands and all Argos." The life depicted in the Homeric poems appears to be somewhat later than that indicated by the monuments of the Mycenæan age, as one would expect from the poems themselves, where the poet never claims to have seen the great struggle before Troy and knows that he lives in a degenerate age; but the difference is not so great as some have maintained who assume a sudden lapse into barbarism on the downfall of the prosperity of Mycenæ.

Curiously enough, while only a few years ago critics were impugning Homer's veracity, saying that he could not have seen products of an art so developed as he describes, now they say that he must be of a much later age, since the objects found at Mycenæ and Vaphio are so elaborate and artistic. Dr. Dörpfeld is understood to hold that the story of the monuments agrees well with that of Homer. Doubtless much remains to be learned from Troy, for which scholars are eagerly awaiting Dörpfeld's great work, and still more from Crete, where, under the Turkish Government, systematic explorations and excavations have been so difficult as to be impracticable. Recently, as our readers know, Crete has furnished specimens of the earliest style of writing on Greek soil, and the latest work on Greek mythology finds indications of strong Cretan influence in the cults of most Greek States. According to the old Greeks themselves, this island of Minos was one of the very earliest seats of Greek civilization, and scholars may well hope that investigations there will be as fruitful as those at Troy, Mycenæ, Tiryns, Orchomenos, and Vaphio have proved.

To the general reader the chief value of this book, of course, lies in its clear exposition of facts with regard to the landmarks of the Mycenæan world, the fortress-city, the palace, the private house and domestic life, the dwellings of the dead, dress and personal adornment, arms and war, some phases of Mycenæan art, the islands as mediators in art, writing in Mycenæan Greece, religion, the problem of Mycenæan chronology, the problem of the Mycenæan race, and the Mycenæan world and Homer. To the archæologist the ingenious views of Tsountas in explanation of these facts are full of interest, although often mere theories. He holds that the shaft-graves belong to an early race of Greeks called Danaans, akin to the Minyan founders of Orchomenos, who came from the north, where they had dwelt on piles, like the inhabitants of the Swiss lake cities, and established themselves first at Tiryns in the midst of a marsh, and then on the Larissa of Argos and at Mycenæ. Later, another race of Achæan Greeks came from a colder region, where they had been accustomed to underground dwellings, and, advancing toward the south, met the Danaans at Mycenæ, overcame them, and fortified that citadel still more strongly. To these Achæans belong the "beehive" tombs and chamber-graves, since they made the dwellings of their dead as like as possible to those of the living. One of the strongest supports of this hypothesis, however, is removed by Dörpfeld's explanation of the ruins of the private houses found at Mycenæ, of which the tall foundations without opening were compared by Tsountas to the supports of the lake-dwellings; and another argument, which recognizes in the great corridors and chambers of the citadel of Tiryns "a reminiscence of the primitive palisade earth-work such as is found in the *terramare* of Italy," is inconsistent with a passage on page 23, where these chambers are compared with similar structures in Carthage and the authors "assume that Phœnician and Lycian alike, in Africa and in Argolis, are employing a construction borrowed from an earlier Asiatic race." Another statement introduced on the same

page (334) is probably wrong. There the American editor says that the Homeric "heroes never go fishing but once, and then only in the last pinch of famine." In fact, the men of Menelaus fish in the fourth book of the 'Odyssey' as well as the followers of Odysseus in the twelfth book, and the Homeric expression hardly justifies the common belief that the heroes would eat fish only "in the last pinch of famine," while the poet is certainly familiar with fishing not merely with net and with hook (with sinkers, and horn to prevent the fish from biting off the line), but also with fish-spear, although the heroes may not have cared particularly to "suck of the abundance of the seas and of the treasures that are hid in the sands." And, on the other hand, the absence of fish-bones from the remains of Mycenæ does not prove that the inhabitants of those ruined houses never ate fish; the bones of a shad or even of a cod are not so imperishable as oyster-shells.

Dörpfeld's introduction contains in its eleven pages, with much commendation, the clear statement of six points in which he differs from the Greek author. The translation from Tsountas's work is accurate. Twice (pp. 189, 201) "probably" stands for "possibly" (ἴσως). On p. 56, at the bottom, 37 should be read for 27; 1890 for 1895, near the top of p. 61; XX for XI on p. 299. Zara, Mideia, Pronoia, and St. Elias of the text correspond to Szara, Midea, Pronia, and Elias of the map. Kampos (pp. 8, 160) is in Messenia, not Laconia—at least, according to the ancient bounds. "Peisander" (p. 148) is for "Periander." The proof-reader has allowed to stand "*provénance*" (*sic*), as well as "*provenance*," "provenance," and "provenience"; and εὐκνημίδες (for ἐυκνήμιδες) twice. If the transfer is required of the Greek technical terms *parastades* and *tholos* for *door-posts* and *dome*, these and *dromos* should have been explained when first used.

A critic is not expected to complain of the cost of a book for which he has not paid money, but he may express the regret that a book of such general interest and importance to classical scholars should be listed unnecessarily at so high a price as six dollars. This price cannot be due to the illustrations, for the plates and cuts are not so numerous as in the similar work of Schuchhardt, and, with half-a-dozen exceptions, they are no better. A good index is provided, which the original edition wholly lacked.

GARDINER'S GUNPOWDER PLOT.

What Gunpowder Plot Was. By S. R. Gardiner, D.C.L., LL.D. Longmans, Green & Co. 1897.

Mr. Gardiner's latest contribution to our knowledge of the Stuart period has a somewhat unusual character. It combines the excitement of a detective story with the broadest outlines of national policy. Father John Gerard, S.J., published not long ago a doughty attack on the received version of the Powder Plot. The substance of his book had been presented to popular audiences in London, and, with the aid of lantern illustrations, had attracted considerable attention. Indeed, the *Edinburgh Review* thought it worth while to refute him. Mr. Gardiner now comes forward armed cap-à-pie to conclude the controversy in defence of the story which is told to children in the elementary schools. Keeping strictly to his text and dismissing all extraneous matter, he contrives in four chapters to sift the testimony so far as it relates to the active conspirators. Two chapters more interpret the episode in the light of James's attitude towards Roman Catholics. The difference between the two adversaries is, that while Father Gerard is content with casting doubt and with adumbrating a solution incapable of proof, Mr. Gardiner defends a distinct thesis. The one assures us that "the history commonly received is certainly untrue," and broadly hints that Salisbury either devised or fomented the plot for his own advantage. The other sets out by saying: "Of course there must be some ragged ends to the story—some details which must be left in doubt; but I shall ask my readers to watch narrowly whether the traditional story meets with any obstacles inconsistent with its substantial truth." One cannot complain that the defendant is less clear-cut and decided than the plaintiff is. Whatever else may be said of the two books, it is certain that Mr. Gardiner has no passages so weak as those in which Father Gerard, by innuendo and the hearsay of later generations, seeks to implicate Salisbury.

A proper examination of this recent literature on the Gunpowder Plot would involve a comparative view of the two writings just named and of the *Edinburgh Review* article. At the very least, Father Gerard and Mr. Gardiner are inseparable. Gauden and Milton, 'Eikon Basilike' and 'Eikonoklastes' are not more bound up together. Though we find ourselves unable to enter upon the subject in its entirety, we shall keep sight of the fact that dialectical interest is its keynote. Prima facie, Father Gerard's discovery seems to be a mare's nest, and the motto of his Society hardly promises pure historical criticism. On the board of commissioners were men hostile to Salisbury and inclined to lenient treatment of the recusants—men of honor withal. The evidence was good enough for them, and they were doubtless in possession of much information which has since been lost. With this feeling at the outset, we are soon confirmed in our suspicion that the special pleader is at work by the manner in which evidence is treated. Bishop Talbot, Osborne, Goodman, Father Grene, and Lord Cobham are among the witnesses subpœnaed to damage Cecil's reputation. Then, as if their separation from the event were not fatally damaging to their testimony, the second Earl of Salisbury is made to say, on the authority of an anonymous writer in Fulman's Collection, that "the plot was his father's contrivance." Mr. Gardiner is the last man to let pass such looseness of treatment even in a minor matter. When it comes to a polemical occasion, he is quite right to keep his eye on his adversary's manner of using the sources. However, instead of getting vexed, he merely shows surprise. "It seems strange to find a writer so regardless of what is, in these days, considered the first canon of historical inquiry, that evidence worth having must be almost entirely the evidence of contemporaries who are in a position to know something about that which they assert."

The reviewer in the *Edinburgh* is appeased when he has picked Father Gerard's objections to pieces. Mr. Gardiner is much more particular. He uses the analogy of a key in the wards of an intricate lock. If one theory fails try another. After the last has been tried in vain it will be time, and then only, to exclaim with a hopeless air, "What *was* the Gunpowder Plot?" Mr. Gardiner's first key is the accepted version, and he finds that no other is required. He puts Fawkes into the witness-box, follows him through his various depositions, and, having arranged the facts thus obtained, proceeds to the later documentary evidence. His conclusions at this stage are that the Government's knowledge was at the outset extremely slight; that Fawkes was gradually forced by cross-examination and torture to tell a more coherent story; that he bears true witness to the mine and cellar; that Winter's deposition is authentic; and that the exchange of Keyes's name for Winter's in the report of Fawkes's examination on the 17th "was at least the erasure of a false statement and the substitution of a true one."

Father Gerard is much concerned by the topographical difficulties that hinder one's belief in the ancient tale of Gunpowder Plot. Mr. Gardiner devotes a chapter to these and to the contention that the bulk of powder reported is incredible. He grants that Whynniard's house, of which Percy leased a part, has been erroneously located when placed to the southwest of the House of Lords; but, with the aid of the Crace collection of plans, he finds a house which "alone combines the conditions of being close to the House of Lords and having a door and window looking towards the river." Connected with this house was a piece of waste land mentioned in a deed of 1600. It was fairly large, and ran down to the river. When, therefore, Father Gerard objects that mining operations could not possibly have been carried on with secrecy in a district so populous as Westminster, Mr. Gardiner replies: "Nobody who had not business with Percy himself or with his neighbor on the south would be likely to approach Percy's door. As far as that side of the house was concerned it would be difficult to find a more secluded dwelling." Mr. Gardiner undoubtedly follows the safest course in meeting topographical objections by antiquarian research. Still, a single obvious consideration would have satisfied most people. Thousands upon thousands of curious visitors must have gone to Westminster in the months immediately following the discovery of the plot. Negative evidence must be used with caution, but some one would have noticed and talked had there been a discrepancy plain to the eye. One cannot now reconstruct the whole precinct of St. Stephen's, but clearly Father Gerard is too clever by half. The powder difficulty is quickly dismissed. Father Gerard assigns 400 pounds to the barrel instead of the 100 pounds then usual. This is a thrust of the *Edinburgh Review* which Mr. Gardiner considers final.

Closely allied to Father Gerard's theory that Salisbury promoted the plot to draw in Jesuits is the question of discovery. Was Monteagle's letter the first warning or was it invented for theatrical purposes? Father Gerard, on the watch as he is for traitors, fastens on Percy and Catesby—Percy, who in his opinion was a bigamist, and Catesby, who gave false reports to Sir Everard Digby and said false things about Garnet. This is to upset the accepted view that the secret escaped through Tresham's hint to his brother-in-law and to forge a long chain of treachery. The case against Percy consists

of Goodman's report that Sir Francis Moore, "going homeward from York House to the Middle Temple at two [in the morning], several times met Mr. Percy, coming out of that great statesman's house, and wondered what his business should be there." The case against Catesby is too flimsy to deserve repetition. Mr. Gardiner's unfaltering opinion is that word came to Monteagle through Tresham, and that the letter which gave the Government its first hint of impending danger was prepared with Monteagle's previous knowledge. Else why should he, when on the point of sitting down to supper, have handed it to one of his gentlemen with a direction to read it aloud? Tresham had been brought into the plot at the eleventh hour for the sake of his influence and wealth. The theory is as old as Jardine that, shrinking in the end from wholesale slaughter, he helped to contrive Monteagle's Hoxton visit and the dramatic reading of the letter. Mr. Gardiner acquits Salisbury from the charge of connivance, on the ground that he would have acted stupidly in giving the plotters a chance to escape:

"Salisbury's object, according to Father Gerard's hypothesis, was to gain credit by springing upon the King and the world a partly or totally imaginary plot. If he was to do this, he must have some evidence to bring which would convince the world that the affair was not a mere imposture; and yet it is to be imagined that he contrives a scheme which threatens to leave him in possession of an obscure letter, and the knowledge that every one of the plotters was safely beyond the sea."

Fawkes and his band disbelieved in discovery because the cellar was not searched, and remained to be caught instead of effecting an easy escape.

Having disposed of matters arising from Sir Thomas Knyvet's raid on the cellar, Mr. Gardiner takes a higher flight. The men concerned in this desperate attempt were far from being bravoes or blackguards by profession. They were of good estate, brave, and devoted to a cause. Why, then, were they willing to sacrifice life on such a colossal scale? The answer is, that they were driven to a corner by the enforcement of the recusancy laws, and believed that James had broken pledges made when he was a candidate for the crown. From the charges brought against him, Salisbury's part in the proceedings against Catholics is traced with great care, and Mr. Gardiner's concluding chapters show that, his policy having been accepted and partially carried out, he was above the need of ingratiating himself with the King at the time the plot came to light. We must pass rapidly over what is the most striking feature of the case, both historically and in view of the present dispute—the responsibility, to wit, of Garnet, Greenway, and other spiritual advisers for this scheme to exterminate King and Lords. What Father Gerard can put on Salisbury's shoulders may, with plausibility, appear to be taken off the shoulders of Henry Garnet. But as Salisbury is not very heavily burdened, neither, in our opinion, is Garnet very appreciably relieved.

We should like to supplement this epitome of Mr. Gardiner's main arguments against Father Gerard by a short paragraph of general comment. The Gunpowder Plot may once have resembled "London column," which,

"pointing at the skies,
Like a tall bully, lifts the head and lies."

That is no longer the case. Every one whose judgment is worth attention knows that the mass of Roman Catholics are as free from its stigma as from connection with the fire or the mythical conspiracy of Titus Oates. Father Gerard need not exculpate them, and exculpation, we are fain to believe, is his main end. In the background lurk two critical questions. What were the teachings of the Jesuit order in the matter of assassination, wholesale or retail, and what was the motive of the Government in persecuting Catholics? Both of these questions Father Gerard leaves aside, but both are of enough consequence to justify him in continuing the discussion past the point where he has dropped it. His explicit tenets would be of considerably more interest than are his indirect shafts. For the present we heartily commend Mr. Gardiner's action in noticing this attack upon a hitherto accepted verdict of history. Like the fallacies of the circle-squarer or of the man who maintains the earth's flatness, Father Gerard's sophisms can be dealt with if taken seriatim. Mr. Gardiner has been at considerable pains to prove to his readers a conclusion which must have been clear to himself when he read Father Gerard's book. Moreover, he has handled the weapons of controversy with perfect skill and courtesy. We shall not attempt to deny Father Gerard's deftness of sword-play. In this respect he equals the Oxford defenders of 'Phalaris.' But his assault on Gunpowder Plot belongs to the large class of historical paradoxes—clever and ingenious, yet suggesting a famous comment on French cookery. The French, says Thackeray, make so many excellent dishes from the top of a nettle, it is a pity they haven't a little good butcher's meat.

CHILDREN'S BOOKS.

'Toinette, and Other Stories,' by Barbara Yechton (Whittaker), is a series of tract-like tales about some young seamstresses, shop-girls, and restaurant waiters who belonged to a girls' friendly society. Without offence to such societies, we must lament that an honest philanthropic enthusiasm is not the only qualification needed by a story-writer, and sometimes actually hinders success. The present book will suit only an embryonic literary taste, and for information we should prefer an annual report.

The heroine of a girls' book by Frances Courtenay Baylor, 'Miss Nina Barrow' (The Century Company), unites in her own small person all the faults imputed to the most exaggerated of American children; consequently, the feeling she awakens in a well-regulated family of fourteen or fifteen English cousins whom she visits at their country home is, naturally, one of amazement and horror. Her indignation at their plain fare and simple clothing meets their wonder at her smartness and utterly rude manners with comic effect. The picture of English family life is of real interest, and one hopes it may be typical. The improvement wrought in a most unpromising infant phenomenon by a more tonic treatment than she had received from her weakly indulgent grandmother, is not entirely surprising, for we are said to be an adaptable people. Perhaps it is a mistake to class this among children's books. At least, we find a very positive lesson for parents lurking behind the child's story.

'The Adventures of Mabel,' by Rafford Pyke (Dodd, Mead & Co.), inspires a degree of respect by its beautiful type and paper, and by its simply expressed pictures, for which three values have sufficed; but when one comes to read the story, indifference or disapproval arises. Some will stop at indifference when they find positive merit lacking, and think us over-critical to object to a childish heroine who, thanks to a fairy gift, tames a fierce wolf in the forest and a wildly unmanageable horse, who takes the lead in a piece of defective work, and copes single-handed with a monstrous giant of the old-fashioned child-devouring kind; and, in consequence of these and like actions, often hears her grandmother say, "You are a very wonderful little girl"—a judgment she accepts without disclaimer. Such incidents, to be sure, may be told in a harmless burlesque way, but unless better guarded than in this instance nothing would be more likely to foster conceit.

The Century Company send out this year 'A New Baby World,' composed, like its predecessors of former editions, of selections from *St. Nicholas*, chosen by Mrs. Mary Mapes Dodge. Many of the pieces are new to Baby World, but some of the old favorites will be welcomed again.

The 'Fairy Tales from the Far North,' translated from Asbjörnsen's Norwegian by H. Braekstad (Armstrongs), suffers by a close comparison with the translations from the same author by the late Sir George Dasent, which he called 'Tales from the Fjeld.' It is small blame to say that the English of the present translations does not equal that of the earlier volume, for that stood above rival in racy vigor. But having already in English a translation of these tales that left nothing to be desired, what possible call is there for H. Braekstad or anybody else to give the same thing over again in even slightly inferior form? Of course the selections in these two volumes are not identical, but a cursory examination shows that fourteen of the forty tales in the present book appeared also in 'Tales from the Fjeld,' and, as the stories often have changed names, possibly more of them are concealed behind such a mask.

Mr. Andrew Lang adds this year to his fairy rainbow a 'Pink Fairy Book' (Longmans & Co.). The supply of this delightful lore is plainly inexhaustible to one who holds the key to its treasury, and in this volume, still, "the world is all before us where to choose." Japan and Africa, Sweden, Denmark, and Italy—with who knows how many other far regions?—all have some wonder story in reserve for the lucky English child.

Many a bit of information is given about the ways of insects and small beasts and birds in Clara Dillingham Pierson's 'Among the Meadow People' (E. P. Dutton & Co.)—given, too, with the sugar coating of imagination which is thought needful to make anything like a fact go down with the youngest readers. It is with some surprise that we hear of a butterfly's visiting, in one and the same day, a daisy, a cardinal flower, and a violet. Still, after watching violets bloom throughout the past season from May to the very edge of November, it might be rash to find fault with the above combination, although it is not a usual one in this part of the country. The book, however, deals rather with animal than with vegetable life, and will be a pleasant addition to a young child's library.

'The Plant Baby and its Friends' (Silver, Burdett & Co.) is designed by its author, Kate Louise Brown, as a first reader in botany for primary scholars. Numerous drawings in the text illustrate botanical distinctions, and many of the hard words needed for exact description are insinuatingly introduced.

Miss Wilkins's excellent prose is good enough for most of us, and we think few will prefer the versified form which she adopts in 'Once upon a Time' (Lothrop). She seems to feel a little apologetic about it herself, and makes her appeal "to the sweet charity of little folk." Some of the verses are graceful, however, and pictures abound; among them none is more attractive than the

"Dear little model lassie,
Who was seen, but never heard."

'Adventures in Toyland,' by Edith King Hall (Scribners), is a group of stories told by a doll to a little girl, about the doings of dolls and toys in the seclusion of private life, when children are out of the way. Their adventures seem almost too tame to be worth chronicling, but they at least furnish an excuse for some odd-looking pictures which are doubtless expected to provide fully half the amusement.

Wild and grotesque fancies throng the pages of 'The Flame Flower, and Other Stories,' written and illustrated by J. F. Sullivan (J. B. Lippincott Co.). This exhaustless supply of puns and oddities will feast the childish imagination, but we should rather expect the youngsters to resent the frequent sly winks at their elders and the references which they cannot understand. The pictures are numerous and decidedly interesting. They show forth better than words many surprising wonders of natural (?) history like the omnibustard, the porcupineapple, etc.

'Here They Are,' a companion book by the same author, published by Longmans, Green & Co., offers a most unpromising exterior. A great bogie which suggests nothing so much as the famous "bandersnatch—the jaws that bite, the claws that catch," seems to stand guard over the volume and threaten rather than entice the approaching child. But, being old and brave, we venture inside the cover to find, as in 'The Flame Flower,' excellent, though rather frightful, pictures, and stories full of quaint conceits which inevitably suggest our old friend "Alice" and her Wonderland, but which have enough vigor and originality of their own to avoid the reproach of imitation. An amusing figure is that of the pirate's prim little mother, aged ninety-three, who innocently makes tea on deck beneath the black flag, and goes below whenever an engagement is on, being told by her thoughtful son that rain threatens. Another real acquisition is "The Blue Thing with White Dots"—a creature who begins life as a nondescript animal, and the only one who lacks a mate, in a child's Noah's Ark; whose youth is saddened by ignorance of his name, in quest of which he wanders far and long till finally he is discovered by one of his early human friends as an object of worship among a savage tribe.

'The Missing Prince,' by G. E. Farrow (Dodd, Mead & Co.), needs little comment. It is just such another book as the same author wrote last year—full of dreary nonsense without a spark of genuine fun. Its poor quality makes ridiculous the author's complacent preface in which he speaks of receiving "many nice letters" about his former book, and asks his young friends to write and tell him what kind of a story they would like him to write next but one—the very next being already in hand. This is demand and supply with a vengeance.

'Singing Verses for Children' (Macmillan) is a holiday collection of eighteen songs, the words by Lydia A. Coonley, pictures by Alice K. Tyler, music by Eleanor Smith, Jessie J. Gaynor, F. W. Root, and F. H. Atkinson, jr. Musically the best of the songs are Mr. Root's, and of the whole collection it may be said that the three arts combine in about equal proportion in giving the book such merit as it possesses.

Last year the Scribners issued a 'Field-De Koven Song Book,' and its favorable reception has encouraged them to produce another book on similar lines, 'The Stevenson Song Book,' a musical setting of Robert Louis Stevenson's charming 'Child's Garden of Verses,' in which the great novelist revealed himself as one thoroughly in sympathy with the child nature. Twenty of the poems have been provided with music, by De Koven, Stanford, Gilchrist, Homer N. Bartlett, Hawley, Foote, and Chadwick. These songs are hardly on a level with Stevenson's verses, none of them being specially original; but they are popular in character, and those who enjoy the average operetta—which means a great many—will like them.

'Three Operettas,' by H. C. Bunner, the music by Oscar Weil (Harpers), is another volume for young folks in which the poetry is superior to the music, though that serves its purpose well enough. Although two of these operettas are in two acts, and one in three, they are all very short, and amateur performers with their audiences will find them quite amusing. The names of the operettas give an idea of their nature—"The Three Little Kittens of the Land of Pie," "The Seven Old Ladies of Lavender Town," and "Bobby Shaftoe." The scenes are laid in various places, but the time is always "once upon a time." There are not a few sly touches of humor that cannot fail to please children beyond their teens.

The Boston Browning Society Papers. The Macmillan Company. 1897.

In this massive volume the eleven-year-old Boston Browning Society offers to the world for the first time a series of essays intended to represent one of its "many modes of activity." In their preface the editors strike the defiant note of those whose efforts have hitherto been misunderstood. They claim that these papers will

"demonstrate to the most sceptical of those who in the past have failed to perceive the significance of the literary movement which the Society represents, and, therefore, have failed to appreciate the value and permanency of its results, that the literary criticism pursued by the Society has been broad in scope as well as impartial and scholarly in quality."

We fear that there are hardened critics whom even these essays, penned as they are by "men and women who have attained eminence as specialists in philosophy, theology, and literature," will leave cold. Among the worshippers of true poetry and true romance are those who think that there are certain characteristics (and those the most essential) in the work of every great poet which can only be cheapened by the most careful explanations that the "sound and broad culture" of Boston can furnish. There will ever be those who would rather read their "Childe Roland" with a thrill of the mysterious than search out its lessons under the guidance of the exponents of ethical culture. They will complain, with a certain modern critic who lamented that the London Browning Society had explained his divinity away, that "where one had hoped that Browning was a mystic, the Society has sought to show that he was merely inarticulate. Where one had fancied that he had something to conceal, the Society has proved that he had but little to reveal." To the vast majority, however, which craves to have every subtlety digested into words by the literary critic, these essays will afford ample sustenance. The æsthetic critic, nowadays, needs more than ever to remind us of the "long-standing feud" between Poetry and Philosophy, which Plato hardened his heart to maintain. The efforts of the Boston Browning Society seem aimed to prove that in Browning these old enemies have kissed again with tears. For the Society, as for Lessing, the catharsis—the soul's purification by a work of art through the emotions of pity and terror—must be moral, not æsthetic. "Qu'est-ce que cela prouve?" asked a spectator, after the performance of "Athalie." For the Society, every poem of Browning illustrates a rule of conduct and bewails the lack of harmony between that rule and the actions of the individual soul. Rarely are we allowed to forget the "moral culture" that we ought to carry away from a reading of the poems. "The Greek words for beautiful and ugly have secondary meanings of honorable and base," remarks one essayist; "that is to say, ethics is assumed to be a branch of æsthetics—an idea quite contrary to our New England bringing up" (p. 393). ". . . I think that both Homer and Browning believed that poetry should be didactic" (p. 396). Seldom, indeed, do we meet the purely æsthetic point of view in these papers, though more than one title takes the name of Art in vain.

One distinction, too often neglected, we should like to see maintained. The words "Philosopher" and "Philosophy" strike the eye on every page. But from your true philosopher who, judging undisturbed, decides that the freedom of the will is an illusion, that good and evil are merely relative terms, that there can be no data for the belief in the permanence of the ego after death, it is a far cry to Browning the moralist and the Browning Society pointing the moral. "To-day we look at the moral side of a question and neglect the others," says the author of "Browning's Art in Monologue." "Nothing is of any account except as it helps me to be, except as it develops my soul. The world talks in such fashion to-day to those who would gain its ear. Its favorites are . . . poets who preach, like Wordsworth; . . . a leader of our time must be a teacher of morals." This is the keynote of nearly all the essays. So we have sixteen pages of lessons drawn from "Caliban on Setebos," closing in this strain:

"We Calibanise when we transcribe into the character of God our own defects, and attribute to Him qualities inconsistent with either wisdom, justice, or love. We Calibanise when we impose our intellectual limitations upon the universe; . . . and when we imagine that the universe is run

chiefly in our personal interest or in hostility to us, how much we must resemble the creature who takes his own capricious likes and dislikes for samples of the Cosmos!" (p. 83).

Is this "literary criticism," or is it the peroration of a sermon? The sense of the chaotic which invades a reader of these essays is, we think, mainly due to this constant interfusion of Art and Ethics.

"Broad scope" is claimed for these papers in the preface. No one who reads the one entitled "Homer and Browning" will accuse its author of narrowness of stride. An essay that aims at an "intelligent comparison" of Homer and Browning would tax a colossus. It is, in a sense, true that "Homer's 'Iliad' and Browning's 'Ring and the Book' are both founded on certain infelicities of married life" (p. 391), but the parallel of Helen of Troy and Pompilia is one that the world should be willing and even anxious to let die, along with the striking antithesis, "Homer is often eloquent. . . . Browning seldom aims at eloquence." It is in this essay (p. 389) that we are told that

"the probable date of Homer, who, for the purposes of this paper, I assume was a real person, may be stated roughly as 1200 B. C. . . . His works afford the only clue to his character; and from them we can but infer that he was quite unlike the consumptive-looking individual represented by the bust that bears his name. Like Browning, he evidently was a man of the world, keen-sighted and robust, with a wide experience of life in all its phases."

This is to lapse into "careless habits of accuracy" with a vengeance.

Several of these essays treat of the influence of the classics on Browning, and quote the well-known lines from "Old Pictures in Florence" as a proof of his "repudiation, once and for ever, of the Pagan ideal":

"To-day's brief passion limits their range;
It seethes with the morrow for us, and more.
They are perfect—how else? they shall never change:
We are faulty—why not? we have time in store.
. . . . . .
They stand for our copy, and once invested
With all they can teach we shall see them abolished."

It is true that in Browning's literary life there was a long Gothic period when he was possessed by the vague, which is ever repulsive to the true Hellenic temperament. Too rarely in that period do we recover the calm beauty of "Pauline" of the early days:

"They came to me in my first dawn of life.
. . . . . .
I tell you, naught has ever been so clear
As the place, the time, the fashion of those lives:
I had not seen a work of lofty art,
Nor woman's beauty, nor sweet Nature's face,
Yet, I say, never morn broke clear as those
On the dim clustered isles in the blue seas,
On deep groves and white temples and wet caves;
And nothing ever will surprise me now—
Who stood before the naked Swift-footed,
Who bound my forehead with Proserpine's hair."

But in later life, when the fever was gone, there was a renaissance of classical influence shown in his translations of Aeschylus and Euripides which may stand for Browning's palinode. Still, we are far from agreement with the author of "Balaustion's Opinion of Euripides," who contends that "Browning's transcript is not a misrepresentation of the Greek dramatist" (p. 430). We fail to see how one who is acquainted with the "Alcestis" can object to Mr. Verrall's statement that "Balaustion's Adventure" is a "thorough-going recomposition of the subject." Balaustion is, in fact, like Jowett's Plato, *très belle, mais peu fidèle*. The obvious danger that besets the members of such a society is lest their conviction of Browning's supremacy should run away with their critical sense—a danger that has not always been avoided in these papers. Even idolatry of Browning is seldom as headlong as that of the essayist who (p. 285) gives the epithet "bewitching" to the line—

"Like a late moon, of use to nobody";

and calls it "a passage of flawless and satisfying beauty."

But the Boston Browning Society's Muse, like Hesiod's, can speak the real truth when she will, and incautious admiration is by no means the rule in the present case. The volume certainly does credit to the industry of the Society. "Whether it's worth while goin' through so much to learn so little," as Mr. Weller said of matrimony, is a matter of taste.

The Story of the Cowboy. By E. Hough. D. Appleton & Co.

In the well-aimed "Story of the West" series we have had already two worthy volumes—'The Story of the Indian,' by Mr. Grinnell, and 'The Story of the Mine,' by Mr. Shinn. It would be considerable praise to say that the third book in the line fully merited its place; but it would be too little to say of Mr. Hough's rather unexpected work, which is thoroughly competent and illuminative—an uncommon study of a type so strange that we are not yet used to looking upon it soberly.

The cowboy has a story, and it was worth telling. Probably no other figure in American development has been so misconstrued. Every Eastern imagination knows this Western person—this picturesque, irresponsible, galloping, sixshootering dime-novel-on-horseback. Thousands of sensational or superficial pages and scores of "wild shows" have framed him as settled a convention as Uncle Sam—and with about as much accuracy. Among all who have fattened at his expense there has seemed to be no disposition to show him as he really is—a hard-working, honest, expert, unflinching man, whose technical education required at least the length of a college "course"—and as inevitably must be the man who has accomplished so much. It was only with the beginning of serious work by Mr. Roosevelt and other men who have known the real West and were competent to tell of it, that we began to get reasonable glimpses.

Yet no one has illuminated the subject as Mr. Hough does. With an almost unimpeachable knowledge of detail, he has unusual faculty for telling in large. In so long a story he sometimes suggests repetitions; but his style is peculiarly apt to his theme. It is of the very temper of his field—clear, forceful, contained; sure-footed and bridle-wise as his own "cow-pony." It nowhere runs away with him, but, with so steady a hand on the rein, frequently comes to an effective eloquence. For further confirmation of how the cowboy does *not* talk, act, or think, one may read Mr. Lewis's contemporaneous 'Wolfville' and be amused; to discover what this long-rider does feel, how little he says of it, and in what fashion he says it, it is useful to read Mr. Hough and be informed.

Mr. Hough draws a figure which is not only true but convincing. Satisfactory to the expert, the cowboy becomes intelligible at last to the layman. Suddenly he stands human. He is no longer a freak but a product—a product and a factor. Instead of a theatrical "property," he is a hard (and generally sober) fact in history and economics. He can gallop, and at times does; but he rides through life at a trot. If sometimes dramatic, it is because his existence is generically so severely practical. When we understand the average of this curious type, there ceases to be mystery in the fact that he tamed for sedentary colonization an area larger than that which still includes two-thirds of the population of the United States.

Mr. Hough traces this specific American type back to its germ in the Spanish-American vaquero, who was as picturesque, as expert, and as typical, but less a factor in large economies, because ungrowing. Here the chain is weakest. There is steady gain in the smithing as the author passes, link by link, to the first Saxon pupils of the Mexican cattle-compeller—the Texan squatters—and thenceforward. The unprophetic beginnings and the foreseeing development of "the Long Trail" take hold upon real romance. In another land it would have been sung by troubadours; here, for a thousand to whom "cowboy" is a household simulacrum, there are perhaps fifty who ever heard of this strangest highway in history. But Mr. Hough brings up the rear. He celebrates the Trail, not only with truth, but in a prose which has many large elements of the epic, and is furthest from what ordinarily passes for "poetic style."

Detail is easy to patience, yet no one has so accurately detailed the life and circumstance of the Western cattle-man. Successful generalization is another thing; and no one has nearly so well exhibited the broad significance of this serious, dogged, shrewd struggle with Nature which made, and *was*, the cow-man. It is not necessary to agree with the author as to the kinship of beef-eating and freedom; but he proves the relation of the "cow-country" to the winning of the West. Behind—and enabled by—the cowboy, farms and fences have crept, and a thoroughfare to the Pacific; and, following, have exterminated him. He was not all good, he was not half bad—just a man, shaped by the frontier; rude but fairly heroic. Like the less misjudged trappers and hunters and scouts, the Boones and Carsons and Godeys, he served larger horizons by doing his own narrow duties to the best that was in him or could grow there. Mr. Hough has done a service in drawing at scale this direct, unique product and factor of one typical stage of our development—typical though brief. It was a service to prove the dignity of this one type, which is but another form of every type that met and beat the wilderness in behalf of civilization.

It is particularly aggravating to find in a book of this character such persistent cacographies. *Grama* is conscientiously misspelled "gramma" throughout; *hacendado* is "haciendado" here, with "chaparéjos" for *chaparrejos*. Wholly inexcusable is "broncho," "the Spanish word for wild." No cowboy ever called his horse "Bronch"; it is always "Bronk." Bronco is a Spanish word, invariable in Spanish and in scholarly English; but there are proofreaders who seem to fancy that the word is Greek, and that the vaquero entitled his horse after some "bronchial" infirmity.

Histoire de la Langue et de la Littérature Française. Tome III. Paris: Armand Colin.

The third volume of this important work

does much more than fulfil the promise of the first two, partly, no doubt, because of the greater intrinsic interest of the period discussed, but still more from the spirit in which the collaborators have understood their respective tasks. An admirable introductory sketch by the editor (Prof. Petit de Julleville) sets forth the principles of the Revival of Letters, and insists on the fundamental differences in aim and desire between the strictly religious reformers and their worldly-minded, scholarly contemporaries of the Renaissance. The writer also shows clearly, with the help of carefully selected quotations, that between the Middle Ages and the Revival of Secular Learning the solution of continuity was by no means so complete as conventional opinion would heretofore have had us believe. M. Marty-Laveaux's treatment of Rabelais in the succeeding chapter disposes, skilfully and without over-display of erudition, not only of the gossip frequently connected with the satirist's life, but of the several wire-drawn hypotheses which vainly attempt to explain the obscurer parts of his work; while the critic's independent conclusions force into salient relief the main traits of Rabelais's nature as well as the really important part of his literary and philosophical labors. One might wish, however, that the late Eugène Noël's charming, if not learned, book had been granted a place in the bibliography.

As is but just, the poetry of the sixteenth century occupies many pages in the volume. No general estimate of the Pléïade, to our knowledge, presents so complete and judicial a view of the movement as that of M. Pellissier, which should be read with care by all students of French literature who have been led to take their opinions from the hackneyed, but superficial, verses of Malherbe and Boileau. Nor is there any paradox in maintaining with M. Pellissier that Ronsard and his school were filled with the "classic" spirit of which the following century saw the complete development, and that the Romanticists of 1830, in claiming literary descent from the Pléïade, failed to understand this vital characteristic of its complex tendencies. M. Rigal, in the sixth chapter, has no difficulty in giving attractiveness to the account of the transition from religious to secular plays, but he wisely refrains from enlisting his readers in defence of the high artistic merit of either. His concluding sentence, on the Pastoral Drama, might without rashness be extended to most of the works examined: "Il ne lui manquait que d'avoir produit des œuvres de talent, ou, plus simplement, des œuvres qui méritassent d'être lues."

Among theologians, Calvin and St. François de Sales hold the foremost places. While disclaiming any intention of touching on disputed points of purely theological interest, the commentators (MM. Petit de Julleville and Rébelliau) have not hesitated to express candid opinions on the men themselves and the literary worth of their work. Followers of the one will probably not relish the characterization of him as the "Pope of the Reformation," hostile to the spirit of tolerance, and swollen with "égoïsme intellectuel"; while the faithful of another order may wince over a paragraph which dwells on the milk-and-water wordiness of St. Francis's sermons. Much the most interesting chapter is that devoted to the Moralists, in which Montaigne and Charron seem to us to have received the fairest of judgments from M. Paul Bonnefon, who takes the latter down from the pedestal on which Buckle placed him for English readers, and vindicates the character of the first of essayists from the too common charges of indifference and cowardice. The same critic's examination of the scientific literature of the sixteenth century, chiefly in the work of Palissy, Ambroise Paré, and Olivier de Serres, leaves little to be desired, save that, before quoting a famous aphorism, 'L'Art Poétique' might with advantage have been consulted. Boileau's verse runs—

"Ce *que l'on* conçoit bien s'énonce clairement,"

and not

"Ce *qui se* conçoit."

etc., for reasons of euphony sufficiently obvious.

To historians and writers of memoirs a somewhat scanty place is allowed in this volume, which summarizes the work of Sully in two pages. Fuller justice is done to Bodin, La Boétie, and the authors of the 'Satyre Ménippée'; this last work, by its patriotic and national spirit, no doubt compelling ampler recognition of its merits. The last and longest chapter contains M. Ferdinand Brunot's continuation of the historical development of the language during the same period. We do not know any work in French, generally accessible to the public, in which the details of the long struggle for supremacy between Latin and French are more carefully and interestingly worked out, or in which the subject is treated with equal fairness and lucidity. We would venture, however, to point out a Macaulayesque mannerism in the writer's too frequent use of the phrase "tout le monde sait."

As we have already insisted, the example given in this collaboration of French scholars and critics calls for imitation in English-speaking lands. What strikes one most forcibly in it is the careful avoidance of the polemical tone, the absence of faddish bias. It will be hard for any public or academic library to do without it.

Pompeji vor der Zerstörung: Reconstructionen der Tempel und ihrer Umgebung, entworfen und ausgeführt von C. Weichardt. Leipzig: K. F. Koehler; New York: Lemcke & Buecher. 1897.

This folio volume contains (apart from the text, which is printed in large, handsome type by Grumbach of Leipzig), twelve full-page or double-page plates, made (from water-colors) in photogravure by Bruckmann of Munich, and 150 process cuts of the finest sort, executed in the Royal Academy of Art in Leipzig. The merest glance at this triple product is enough to show that in artistic beauty it is not excelled, and hardly equalled, by any of the works which have ever been published about Pompeii. A more careful examination assures one that it is to be praised not only for its beauty. The author is professor in the Royal Academy of Art in Leipzig, and a painter in water-colors of real genius. He has lived in Italy for many years, and he knows his Pompeii through and through. His work is the result of study and painting on the spot, not of the theories and dreams of the archæologist in his study. His larger illustrations are real works of art, deserving admiration as such altogether aside from their archæological value as restorations of the ruins of Pompeii. They have none of the stiffness and frigidity that characterize all the restorations attempted in the standard works on the city which died that it might live for ever. The atmosphere of human life is all about them, and it is no wonder that Ernst Curtius, after studying the first plates, admitted "dass ihm hier zum ersten Mal Pompeji menschlich näher träte."

But Weichardt is not merely an artist. He is also a practical architect and a scholar possessed of a real knowledge and a true appreciation of the facts of ancient life. He is sufficiently familiar with the literature of his subject, ancient and modern, and he has a most intimate acquaintance with the contents of the wonderful Museum of Naples, so indispensable to every thorough student of Pompeiian and Roman antiquity. Most of his smaller pictures are from photographs of objects in the museum which he has used for the details in his large plates. Others are from photographs of the details of the ruins which he reconstructs. Of both kinds many are here published for the first time. There is not a second-hand cut in the whole book, and the student will not be repelled by the vain repetition of subjects familiar to him from his Overbeck, his Mau, or his harmless accessory Smith. It is true that Weichardt's work is done throughout from the standpoint of an architect, and yet his style is such as to make his book popular in the best sense of that term. Here and there are inserted chapters particularly technical, which, as he says, "laymen may skip."

The twelve large plates are devoted to the Forum Triangulare and its neighborhood, the Greek temple, and the temples of Apollo, Fortuna Augusta, Jupiter, Vespasian, Isis, and the Three Gods. Besides the chapters on these buildings, their details, and their surroundings, there are two introductory chapters on the history of Vesuvius and Pompeii, and another on ancient and modern excavations on this site. A final chapter contains a translation of Pliny's letters about the fatal eruption. Prof. Weichardt intends to publish a companion volume on the public buildings and private houses of Pompeii, provided the reception given to the present work warrants him in so doing. Everybody who sees this book will look eagerly to the fulfilment of his promise. His restorations are the work of a sane, practical mind, and generally it is only in small details that they call for hostile criticism. His most serious probable error seems to be his providing two of his temples with an uneven number of columns in front; yet he has much to say in defence of this peculiarity.

A Correspondence between John Sterling and Ralph Waldo Emerson. With a sketch of Sterling's Life by Edward Waldo Emerson. Boston: Houghton, Mifflin & Co. 1897.

If Carlyle's 'Life of Sterling' is not read by many persons nowadays, as Mr. E. W. Emerson surmises in his prefatory note to this little volume, the more is the pity, for, except his 'Reminiscences,' it is the most tender piece of writing that he ever did, and touches religious matters in his most persuasive manner. Mr. Emerson resents the "Poor Sterling!" note in it, and there was no doubt too much of that, but, nevertheless, the book deserved a warmer commendation to his readers than Mr. Emerson has given it. His own sketch is brief but excellent, within the narrow

limits he prescribes for it. If it errs at all it is by overestimate of Sterling's gifts. Time has winnowed his harvest of prose and verse, as it has many another, and there is not much of it that is of the kind which men do not willingly let die. He appears to have been one of those whose personality is more than anything they do, and who mean more to their friends than we can justify from their writings. In Emerson's case this personal effect of Sterling was so strong that it did not require their knowledge of each other in the flesh. For a friendship so purely spiritual, theirs was very warm and intimate. But it is evident from Emerson's letters that he did not find Sterling so stimulating a correspondent as Carlyle. It is only when the shadow of death is resting upon Sterling that Emerson's writing to him attains his highest mark.

When we read, in Sterling's letters, of Cornelius as the greatest of modern painters, the note is one to give us pause, and there are many such. Thus, Tieck was the one man in Europe Sterling wished to see. His glimpses of Carlyle are interesting, but both he and Mr. Emerson, his editor, do injustice to his feeling for poetry. Sterling writes of him that he "in truth hates all poetry except for that element in it which is not poetic at all." For absolute disproof of this one has only to turn to the new Life of Tennyson and read the letter Carlyle sent to Tennyson on the appearance of the volumes of 1842. Sterling himself reviewed those volumes in the *Quarterly*, and so appreciatively that we do not like to find him saying here, "Tennyson does better [than others], but does little, and they say will hardly wake out of tobacco smoke into any sufficient activity." This would be comprehensible as written during Tennyson's long and almost absolute silence from 1833 to 1842, but, written less than two years after the splendid harvest gathered in the volumes of 1842, it seems at once ungrateful and absurd.

BOOKS OF THE WEEK.

William Lloyd Garrison, 1805-1879.

The Story of his Life told by his Children. Illustrated with over 40 portraits, views, etc. 4 vols., 8vo, gilt top, $8.00 *net*.

This important work (till recently published by the Century Company) has been reduced in price from $12 00 to $8.00, a remarkably low price for what is unquestionably one of the handsomest products of the American press.

"A biography of almost world-wide importance. . . . It will be a standard work of reference"—*Charleston News and Courier.*

"In fact, Southern history is not complete without this work."—*Atlanta Constitution.*

"It is, for the anti-slavery record, final; and the service done to our national history is as great as that to a father's memory. Its one eminent trait, however, is its justice."—*Atlantic Monthly.*

"A masterpiece of m dern historical biography. . . . To call the work a mine of information would be to convey a false impression; it is rather a well-arranged library in which attendant hands are always present to point the way to the exact thing wanted. . . . Finally, the work, while as instructive as the driest manual, is as interesting as a romance."—*Boston Advertiser.*

140 Fifth Avenue, New York City.

THE MACMILLAN COMPANY'S HOLIDAY BOOKS.

ILLUSTRATED BOOKS.

The Old Santa Fe Trail.

The Story of a Great Highway

By Col. HENRY INMAN, late of the U. S. Army. With Eight Full-page illustrations by FREDERIC REMINGTON in Photogravure, and numerous appropriate Initials and Tail-pieces, specially prepared for this book, a Map of the Trail, and a Portrait of Col. Inman.

Cloth, 8vo.
Price, $3.50

The *New York Tribune* gave this book a long illustrated review, from which we quote:

"Starting out to write a history of the Santa Fe trail from just before the time in the early twenties when wagon trains took the place of pack mules, Colonel Inman tries to be historical and consecutive, but he soon yields to the temptation to drop into plainsman's yarns, and to write as though he were amusing the listeners around a campfire. It is not in the least to his discredit. The book is the better for its informality. . . .

"It is deeply significant, deeply interesting, and the charm of Colonel Inman's book lies in its clear reflection of that raw material out of which Bret Harte has woven the romance of the West."

It seems, in short, that all the critics agree with the *Sun*, which says: "It is safe to say that every one who reads it will find it one of the most interesting books that ever came from the pen of an American army officer."

A large edition was prepared, but orders in advance of issue exhausted it and a greater part of a second edition, which will be ready Dec. 1.

The Last of the Saracinesca Series.

By F. MARION CRAWFORD. Two volumes in a neat box.

Cloth, 16mo.
Price, $2.00.

This is certainly one of the most intensely interesting of Mr. Crawford's novels, and it is a part of his creed that a novel should above all else interest and entertain.

The *Chicago Tribune's* critic declares that he has never written a greater novel.

The *New York Times* says: "The plot is a masterly one, bringing at almost every page a fresh surprise, keeping the reader in suspense to the very end."

It is a story of the Sicilian *mafia*, and that of course means tragedy deep and dark. Yet the book has a happier ending than at first seems possible.

In the Permanent Way.
By FLORA ANNIE STEEL..... **$1.50**

The Choir Invisible.
By JAMES LANE ALLEN..... **$1.50**

On Many Seas.
By F. B. WILLIAMS (Herbert F. Hamblen)..... **$1.50**

FOR BOYS AND GIRLS.

Yankee Ships and Yankee Sailors.

Tales of 1812. By JAMES BARNES, Author of "Naval Engagements of the War of 1812," etc.

Cloth, 12mo.
Price, $1.50.

A collection of stories for boys told in a breezy, attractive style, yet with no taint of affectation or superfluity of nautical terms.

Yet it is the old-time sailor of the days of the press gang whom we see here, the time when a naval battle was not an affair of dynamite guns at long range, but a scramble of hand-to-hand fighting, with many chances for the bravest.

The boys will be glad to know these famous sailor heroes and will have a new interest in the history of their country.

Wild Neighbors.
By ERNEST INGERSOLL.....**$1.50**

Citizen Bird
By MABEL O. WRIGHT and Dr. ELLIOT COUES....**$1 50** *net*

Singing Verses for Children
By LYDIA AVERY COONLEY.**$2 00** *net.*

POETS AND POETRY.

Alfred Lord Tennyson.

A Memoir. By His Son.

Illustrated with Portraits, etc. Two volumes. Three editions have been sold already since its first publication in October, and a fourth is in preparation,

Cloth, medium 8vo.
Price, $10 *net.*

There is no dissenting voice to the repeated remark that *the* book of the year is the new volume on the life of Lord Tennyson. *The Times*, New York, goes farther yet, and claims that it is "the biography, not only of the year, but of the decade." Most of the reviewers frankly say that it is an embarrassment of riches, that they hardly know which to name as most valuable—the very considerable amount of verse hitherto unpublished, or the bits of personal comment, literary opinion and judgment of the very highest value of which the letters are full.

Mr. Mabie sums the matter up in *The Outlook* saying that there is so much of Tennyson himself in these pages that they "must be regarded as essentially his own production, and therefore as forming an integral part of his complete work." The illustrations are an interesting feature of the work—steel engravings from the best photographs and portraits of the poet, by famous artists, a facsimile of the MS. of "Crossing the Bar," with others of equal interest.

Golden Treasury of English Songs and Lyrics. Second Series—Modern Poetry.
By FRANCIS T. PALGRAVE. **$1.00**

The Letters of Elizabeth Barrett Browning.....**$4.00**

The Complete Poems of Elizabeth Barrett Browning
$1.75

The Temple Dramatists.

Cloth, 50 cts.; Leather, 75c. each

Each volume will contain a play entirely unabridged. Edited by a well known and competent scholar who will contribute to each volume a concise preface, a full glossary, and brief notes.

The binding is of two styles: olive cloth, **45 cents**; olive paste-grain roan, a binding very like leather, **65 cents** per volume.

Send for a circular of the Volumes ready.

The Bon-Mot Series.

Royal 32mo, gilt, 75 cents each.

Edited by WALTER JERROLD

Decorated by AUBREY BEARDSLEY.

Bon-Mots of

Sydney Smith and Sheridan.
Chas. Lamb and Douglas Jerrold.
Samuel Foote and Theodore Hook.
The Eighteenth Century.
The Nineteenth Century.

For Sale by all Booksellers, or by the Publishers. Address

THE MACMILLAN COMPANY, 66 Fifth Ave., New York.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 25, 1897.

The Week.

The agreement between the seal experts, conferring at Washington, appears to have been reached by dovetailing their reports together, contradictory parts and all, and then putting their names, in a spirit of delightful harmony, to the resulting conglomerate. A casual application of the methods of the higher criticism will reveal the authorship of the several parts of the document. Thus we have the assertion that "pelagic sealing involves indiscriminate killing"; that is plainly an American expert. But the Canadian has his innings in the opposing statements that "the pelagic sealers respect the limitations of the law," and also that "pelagic sealing has of late fallen off in greater ratio than the herd has, thus producing a tendency towards equilibrium in numbers." So, throughout, an American contention is balanced by a Canadian contention, and all the experts heartily agree to everything. "The catch at sea contains a marked excess of females" (American). "The killing of males on land is the cause of this" (Canadian). It is all very funny, but, of course, it is "a great victory for the United States." The greatness of the victory is evident to the meanest understanding when one observes how this unanimous agreement of the experts riddles many of the statements made in Secretary Sherman's coatless dispatch. That precious document had much angry talk about the Canadian sealers violating the terms of the Paris award; the report says explicitly that the "limitations of the law" have been observed by the pelagic sealers. Mr. Sherman, or whoever wrote his dispatch for him, was certain that the herd would soon be exterminated unless the murderous Canadians were called off. Says the report: "The herd is not in danger of actual extermination so long as its haunts on land are protected and the protected zone is maintained." That is to say, if the American killing is properly guarded, the Canadian pelagic sealing will not exterminate the herd. These two admissions in the report which is such a tremendous victory for us, throw down Mr. Sherman's dispatch like a house of cards.

Sir Wilfrid Laurier must be a worse man than we take him to be if he is not affected by the reproaches levelled at him by the sorrowful American press. Everything had been made so easy for him to walk into Gen. Foster's seal trap. It had been hinted that Canada might fall back on her undoubted legal rights in the matter of pelagic sealing, but this was a suggestion positively shocking to our best newspapers. They refused to take so low a view of Canada. She would undoubtedly agree to stop pelagic sealing on the ground of kindness to animals. Sir Wilfrid was too tender-hearted a man to chaffer over questions of tariffs and alien laws when the chance was given him to save the lives of seal pups and "bachelors," so that we might slaughter them at our leisure. But despite all these blandishments, the Canadian Premier has gone home insisting on the monstrous proposition that if Canada is to make a concession to the United States, the United States must also make a concession to Canada. This unheard-of obstinacy and this undiplomatic proceeding on the part of Sir Wilfrid have at last stricken the scales from the eyes of the protectionist press, and it is now telling him some wholesome truths. It has its own ideas of a statesman who thinks good neighborhood and amicable trade arrangements of more value than many seals.

News comes from Boston that all the New England Senators are in favor of the annexation of Hawaii against the protests of the great bulk of the inhabitants, on the demand of a small minority of foreigners. No community on either side of the ocean has, within the century, turned its back so completely on the traditions of its own political and social life. The only parallel to it we can recall is the French occupation of Rome in 1849. When we remember that one of the fundamental principles of the Republican party, on which it fought and conquered, was the right of all men to be consulted concerning their form of government, and then remember that the "American" Lodge and the New England Hoar deliberately propose to deny this right to a large community which is much more intelligent than the Southern negroes were in 1866, we cannot help wondering what the founders would say if they heard these two worthies justifying their robbery and their amazing un-Americanism. "Sir," said Wendell Phillips on a famous occasion, of a Massachusetts Attorney-General, "for the sentiments he has uttered on soil consecrated by the prayers of the Puritans and the blood of the patriots, the earth should have yawned and swallowed him up." And we may say now that if the earth took a similar course with regard to the present New England Senators, it would only do its duty to those of its children who are striving for better things. A good "yawn" that would take in the whole Republican delegation, in fact, would not shock the moral sense of the western world.

If the scheme of Cuban autonomy has been correctly outlined in the dispatches from Madrid, it goes, in liberality, far beyond anything that ever before entered into the heart of a Spanish statesman to conceive. It is practically up to the measure of home rule that Canada enjoys. There is to be a Cuban Chamber, elected by popular vote, and a Cuban Senate, which shall together have power to vote the budget, and even to establish a Cuban tariff. Moreover, the Governor-General and his subordinates are to be responsible to the Cuban Chamber—which, of course, means, if it means anything, that they may be turned out of office by an adverse vote. Spain is to regain control of international affairs and of military and naval matters, and is to appoint the judges. There is also a clause, which may be intended for tricky interpretation, providing that all laws "of a national character" shall be kept within Spanish control. But, all allowances made, this project of autonomy is surprisingly generous. It is so much so, in fact, that it may well be doubted if the Government can induce the Cortes to vote it. It is precisely the kind of autonomy which the Conservatives, now in a great majority of the Cortes, have said over and over again that they would never grant. As for the Cubans, if they are simply battling for local control of local affairs, this large concession should satisfy them. If they are bent on absolute independence, the offer comes too late. But the main difficulty still lies in the Congress of the United States. What that body will do, probably both President McKinley and Prime Minister Sagasta would give something handsome to know. The only safe thing to prophesy is that it will do its best to make mischief.

The annual reports of the various cabinet officers are reaching an expectant, but not too eager, public. They all come very near the French critic's definition of "Paradise Lost," as an illustrious but perfectly insupportable poem. However, one thing is clear in the masses of dull verbiage, and that is that all the Secretaries want more money. Their benevolent plans for the people unfortunately require the people first to pay increased taxes. But this is a mere matter of detail, as is, of course, also the fact that the deficit is already above $44,000,000 for less than half the fiscal year. As the astute Foraker remarks, there is a good deal of borrowed money still in the Treasury, and we can issue more bonds if necessary. It would be a petty mind that should dwell on such grovelling considerations as money cost, when, as Secretary Wilson says, in a report sub-

mitted to Congress with the approval of his chief, "the people's President, now executing the laws of the republic and guiding its policies, sympathizes with those who toil in the field, the factory, the forest, and the mine." Sympathy is what we want, and we hope to hear no more cold-blooded talk about money to foot the bills.

The full returns of the Nebraska election are discouraging to Republicans who expected that "dollar wheat" and other evidences of "McKinley prosperity" were going to reclaim former members of the party who had strayed into Populism. Here is the comparison with the Presidential contest of last year:

	Rep.	Pop.	Pop. Plu'y.
1896	102,564	115,624	13,060
1897	90,222	103,302	13,080

The total vote fell below that in the national contest, as always happens in such a case, but the Populists held their ground, and the result shows no reason for the belief that the Republicans can recover the State in the more important congressional elections next year.

The decision of the organization committee of the Citizens' Union, that it "be continued as a permanent city organization for the furtherance of the declared principles and objects of the Union," undoubtedly accords with the desire of its members generally, and will be welcomed by all who believe in the ends which it was established to promote. The great misfortune of all reform movements in the past has been that they lapsed with the election which they had been hastily organized to influence, whereas the need of such a body is continuous, whatever the result of any particular election. The Union will have plenty to do at once, as Mr. Charles Stewart Smith pointed out last week, in watching the administration of the new city government, in confronting the danger of bad legislation at Albany, and in sustaining there those members of the Legislature who were elected with its support and who have approved its objects. Then, too, four judges are to be elected next year, and, as Mr. Smith well put it, "we don't want them elected, or even nominated, by the Croker-Platt combination." Beyond all this is the necessity of continuous education of the public mind until the time shall come when a non-partisan ticket will not merely get 148,000 votes, but will command the support of a clear majority.

What a wonderful thing popular government has become in our time is shown in no way more impressively than in the amount of attention, much of it serious, which is given to the utterances of Croker and Platt and even Quigg. The business that these men are engaged in is the most disreputable, because the most pernicious to the general welfare, known to man. They debauch the public life and the morals of an entire state. They destroy popular government and set up in its place a personal despotism founded upon blackmail. Yet they issue addresses and give interviews upon questions of public policy, for all the world as if they were the chosen rulers of the people and were really administering a constitutional form of government. As a community we have become so accustomed to this that few of us seem any longer to see anything absurd in an expressman from Owego, Tioga County, issuing from time to time so-called "statements" about the conduct of our municipal affairs, which are mainly given up to violent personal abuse of those of our citizens who have been endeavoring to secure honest government for the city. Why should he feel called upon to admonish us, and why should his views be published in full in the newspapers and solemnly discussed as contributions to the political thought of the time? What has become of the American sense of humor, to say nothing of American pride, that such performances are part of our regular political procedure? What other community on the face of the earth would not only stand Platt's impudence, but would remain calm and quiescent while Quigg's views are published and his speeches laid before it in full?

How does it happen that Tammany has $40,000 in its treasury to bestow in charity at the close of a campaign? This is the first thought which must arise in every intelligent mind at the news that, under Croker's lead, the organization has voted to contribute $20,000 to the relief of the sick and needy in Cuba and $20,000 more to the relief of the poor in this city. The treasury must have been well filled in order to contain a surplus like this after what was notoriously a very expensive canvass. Where did all this money come from? Tammany has been out of power for nearly three years, and the money could not, therefore, have been made out of the city administration. It had few men in office and could not have raised much of it by assessing their salaries. The sworn returns of the candidates for election show that they did not as a general thing make large payments in return for their nominations. It is doubtful if all of them together paid as much as $40,000. Who, then, were the contributors who filled the Tammany treasury to overflowing? Does anybody doubt who they were? They must have been the brewers and the corporations. No other sources of campaign contributions are so fruitful as to leave a surplus which permits of $40,000 gifts to charity after election.

This is the most portentous aspect of the case. If Croker were using money obtained through dishonest government for the purpose of blinding the poor and ignorant elements of the population to the evils which bad government brings upon them, the matter would be much less serious than it is. There is nothing new about that kind of corruption. Tweed imitated it from the Roman tyrants, and it failed with him, as it had with them, to avert destruction. But Croker is using money obtained in another way. His funds are supplied by the very elements of the population which should be the strongest supporters of honest and intelligent government. Not only have they furnished him with the means for carrying the election and thus getting possession of the city, but the generous way in which he empties his treasury shows that he has no doubt about the future. He is not yet in power, and his followers have been in great straits for several years, yet he can give away $40,000 without a particle of anxiety. Clearly enough, he and they feel assured that there is "plenty more where this came from." As an indication of what Tammany expects to make out of the government of the city during the next four years, this is not surprising; but as a light upon the nature of the forces which triumphed in the recent election, it is the most startling revelation yet made.

The Secretary of the Home Market Club of Boston made his report at the annual meeting on Wednesday week. The illuminating speech delivered by Dingley to the members a few days before seems to have had a filling effect upon the members, as the newspapers say that the meeting was thinly attended. The Secretary said that there had been a small but steady demand for protection literature throughout the year, and he had to record the fact that, notwithstanding the division in the ranks of the free-traders, due to a temporary issue of another kind, their reform clubs and free-trade leagues continue to "fulminate." Therefore, it is idle to expect "that the tariff agitators, who have been thrown down, will stay down." There is no way, he continues, to prevent their ultimate and perhaps speedy success but to combat them from day to day. That is what the Home Market Club exists for, and it intends to keep up the fight "until our colleges shall teach protection as fairly and fully as they teach free trade." That promises a very long battle, for did not the only protectionist professor in a Massachusetts college, Prof. Bowen of Harvard, declare in a public letter that the McKinley act was not protection, but robbery and confiscation, or words to that effect? Did not another protectionist professor, Robert Ellis Thompson, declare that the duties ought to be repealed on all articles controlled

by Trusts, or words to that effect? We apprehend that the Home Market Club has set itself a Sisyphean task, so far as the colleges are concerned.

The football season has practically closed, and the general result is that the known casualties of greater or less gravity which have occurred through the game in the various educational institutions of the country, may be numbered by the score. The unrevealed casualties have also been doubtless very numerous. They have made a deep impression on parents and teachers. Some colleges have prohibited the game altogether. One Legislature has made an attempt to legislate against it. Many fathers have forbidden their sons to play it. There is hardly a contest, apparently, which is not marked by "slugging"; this, when it knocks a man out, of course becomes visible, but there is evidently a great deal which the umpire does not see. There is at last a general agreement that football is not a game for boys. The persons who play it have to be lusty young men, it is admitted, able to bear hard knocks. This disposes of the old story of three years ago of the moral elevation there was in football, and its eminent fitness to form a part of general juvenile training. Education which requires great muscular vigor and sturdy vital parts, of course cannot be general. The advocates of the game as it is, therefore, *i. e.*, "handball," for purposes of moral training, have completely retired from the field. Three years ago they were very lively, and one of them even advised the revered Hinkey to assault one of his critics. All this has ceased. "Mum is now the word." The critics are allowed to rave, and the young men have agreed to keep casualties out of sight of the reporters as far as possible. The only argument now used is that it is great fun, and the young men like it, and the spectators enjoy it immensely, as indeed they do prize-fights.

Two college presidents have, it is true, raised their voices, not in its defence, but against attempts to stop it by legislation, State or collegiate. We have already commented on President Schurman's remarks. President Eliot of Harvard takes somewhat the same ground, and with an equally obvious fallacy in analogy. Baseball, boxing, fencing, rowing, and sailing, which he adduces as hazardous and attended with casualties, are none of them directly calculated to produce injuries. When injuries occur in them, they are the result of pure accident. No one in baseball tries to hit other players with the bat or ball. No amateur boxer boxes without gloves. Fencers fence with buttons on their foils. Rowing and sailing are undertaken for pure pleasure, not for "personal encounter." There is not one of these games, except boxing, in which women cannot and do not share. But when an injury occurs in "handball," it is a natural consequence of the game, which may fairly be looked for. When a big, heavy man falls on a small one with all his weight, or seizes his leg when he is running hard, or "slugs" him in the nose or under the ear, the disabling of the small man is a consequence which it is natural to expect. Nothing but the strength of his physique saves him. The enjoyment of the scene by the spectators does not affect the moral aspect of the case. They would enjoy still more a duel, or a hanging, or a pugilistic encounter. Most duels end without injury to the combatants, or with only slight injuries, but we abhor and prohibit them, because they *may* produce death, and it is no answer to us to say that deaths occur in boats and gymnasiums and on horseback. Walking in the streets has its dangers, but we have to walk in the streets. Our point is, that "handball," by being played, as it used to be, as football, may be as harmless as baseball, and would be a far finer spectacle, and that all games of which the infliction of bodily injuries is a natural, and not unusual, consequence, are brutalizing both to the spectators and to those engaged in them.

Russia quietly goes on wielding the bâton at the European concert. She has just put a veto on the neat little plan, which Germany was thought to favor, of having Turkey apply her indemnity money to building a navy—German shipbuilders to have the contracts. If there was any spare cash, the Russian Ambassador told the Sultan, Russia would prefer to see it devoted to liquidating her own claims against Turkey. In consequence of this remonstrance, the Turkish naval plans are put off "till spring." Most cruel of all, Russia has refused to assent to the choice of Col. Schaeffer as Governor of Crete. His appointment, it was given out in England, had been made with the consent of all the Powers, and the only question was if the Sultan could be made to acquiesce in it. But Russia must have had an afterthought; at any rate, she discovered that Col. Schaeffer was not an Orthodox Greek Christian, and to the appointment of anybody but an Orthodox Greek Christian Russia could never agree. The Cretans, it would seem, can stand massacring by Turks and bombarding by Occidental Christians, but when it comes to a Governor he must be a member of the Holy and Catholic Apostolic Orthodox Greek Church, or they will know the reason why. That it would be hard to find such a man who was not a Russian, or under Russian control, of course never occurred to the innocent Russian diplomats.

It is odd enough that it should be left to Austria, which has the smallest navy of any of the five great Powers, to show how to negotiate with the Sultan. A controversy about the maltreatment of an Austrian subject and Consul at Mersina, in Asia Minor, had lasted a few weeks, and was being conducted in the usual Turkish fashion, by postponements, fresh suggestions, and new proposals, when Austria suddenly brought it to a close by announcing that in case her demands were not complied with on a near day named, she would bombard the town. Her demands were complied with almost instantly. There is no more talk of any European war because Austria has brought the Sultan to reason, than if she had opened fire on a barbarian potentate in Africa. She had all the reason to believe that Turkey would resist, and that, if she persisted, the European nations would fall to cutting each other's throats, that Lord Salisbury had if he insisted on the evacuation of Crete. Yet she never hesitated for one moment. She, with her little navy of one first-class armored cruiser, has ventured to do what Great Britain has not ventured to do with her fifty-one first-class armored cruisers. The contrast can hardly fail to have its effect on the declining fortunes of the Tory party in England.

Germany's rough seizure of Chinese territory may be the first overt step in the treatment of the Chinese Empire just as if it were an African *Hinterland* —that is, as territory to be carved up among the Powers, the first come the best served. Signs have not been wanting that such a process was in contemplation. The thing has been done quietly and by negotiations. France has got her "sphere of influence" by way of Siam, England hers through Burmah, and Russia has doubtless surpassed them all in her concessions obtained in the Northeast. The bold William may have concluded that he would just step in, on the pretext of demanding an indemnity, and get his ports and adjoining territory without the formality of a treaty. He may also, not improbably, have shrewdly reckoned on the help this naval demonstration would give him in his project of getting the Reichstag to vote him the money for a big navy. The Germans have been averse to going in for an aggressive navy, Bismarck openly sneering at the scheme; but if territory has to be seized for the fatherland in every sea, why, the glory must be had even if it comes high. If Germany builds more war-ships, France, of course, will have to add to her fleet, and England to hers; so that Mr. Roosevelt will be compelled to double his naval estimates at once. It is hard on the taxpayers, but think how happy it is going to make the Krupps and the Cramps!

HAWAIIAN ANNEXATION.

The feature of the proposed annexation of Hawaii which ought to excite the most comment and the greatest repugnance, has received scarcely any attention, and among the advocates of annexation none at all. This is the fact that the American republic, based upon the doctrine that all governments derive their just powers from the consent of the governed, proposes to change the government of a distant country without asking the consent of the governed in any way whatever. Does this betoken a change in ourselves? So it would seem, for when we were negotiating for the acquisition of the Danish West Indies thirty years ago, the terms of the treaty provided expressly for its submission to a vote of the people of the islands, and such a vote was taken before the question of ratification was considered by the Senate of the United States. If we act differently now, the reason must be that some change has come over us in respect of the most fundamental principle of our institutions.

It is noteworthy also that while we have been going backward in this particular, other nations have been going forward. "There is a tendency in quite recent times," says Woolsey in his treatise on International Law, "to act in international arrangements upon the principle that the consent of the inhabitants of a ceded territory ought to be obtained." Instances are cited in the treatise. It was provided in the treaty of Prague in 1866 that the inhabitants of northern Schleswig should vote upon the question of forming a part of Prussia or joining Denmark. In 1860 the people of Sicily were allowed to vote by universal suffrage upon the question of joining the kingdom of Italy. When Nice and Savoy were annexed to France, the first article of the treaty provided that "this union shall be effectuated without constraining the will of the inhabitants." A vote was accordingly taken by universal suffrage upon the question of annexation to France, and it was decided in the affirmative. A vote was not taken in the case of the annexation of Alsace and Lorraine to Germany in 1871, because that territory was conquered by war. If it had been a peaceful transaction, it is quite inconceivable that the will of the inhabitants should not have been consulted.

It may be answered that all these are cases where the inhabitants are civilized and in some sense enlightened, and that the parallel does not hold good as to Hawaii. There are several answers to this kind of special pleading. One is, that these islands have been under the civilizing influences of the very limited class now trying to overthrow their government without their consent, for more than half a century. Therefore they cannot be put in the category of barbarians. We know, in fact, that they are not such. Another answer is, that a people must be very degraded indeed if they are not able to vote intelligently on the question whether they shall remain independent or be transferred to a distant and foreign Power. This is not a question of ability to read and write, or to understand a chapter of the Constitution or a verse of the Bible. It is much simpler, as well as more vital to the people concerned. A third answer is that the very reason why the question of annexation is not submitted to the inhabitants of Hawaii is that they would vote against it by an enormous majority. We are not now speaking of contract laborers from Asiatic countries, but of the native population and those of European and American descent who may be classed as intelligent and responsible inhabitants. An immense majority of these are known to be opposed to this transfer of their allegiance, and that is the reason why they are not consulted.

Another reason why we ought not to coerce these people in this way is, that it was by our act that they were put in a position where they could not help themselves. It was our Minister Stevens and our man-of-war and our guns that overthrew the Queen and put the present Government in power. The Queen has figured largely in our discussions of the question, and many well-meaning people have been deceived with the idea that we are delivering a people from monarchical tyranny and substituting republican government instead thereof, whereas we are doing the very opposite thing, if the first words of our Declaration of Independence are a true definition of republican institutions. But at the present time there is no question of restoring the Queen. If we were disposed to do equal and exact justice, we should allow the Hawaiians to vote on the question of having a Queen, if they want one, but that, we acknowledge, is now impracticable. It is not impracticable to allow them to vote on the question of annexation.

That Senator Morgan of Alabama should argue this question as though the people of Hawaii have no rights which white men are bound to respect, is not to be wondered at. He is an ex-slaveholder. He belongs to a class who are in office by virtue of suppressing the votes of the black men and also of such whites as do not vote their ticket. Free suffrage has been abolished in Alabama and in several other Southern States, and one of the most solemn questions that confront the American public today is how to purify the ballot and secure a fair count in those States. They began with cheating the negro. They have ended by cheating each other. It is easy, we say, to understand how men who believe in this system should ride rough-shod over the rights of the Hawaiians, how they should treat the question of annexation as though those rights were non-existent, and talk about England and Japan, and naval power in the Pacific, and every other conceivable thing except the foundation principle of free government. Being accustomed to trample upon it at home, they cannot be expected to see its virtues in the distant Pacific. But that the liberty-loving North, and especially the Republican party, which fought a four years' war to establish this principle, and contended for thirty years after the war to maintain it, should now join in trampling upon it, is something that would not have been believed by any former generation of Americans.

THE INFLUENCE OF THE PRESS.

A good deal of interest has been excited by the fact that although the larger and by far the better portion of the press was united, for the first time in the history of the city, on one side in a municipal election, that side was beaten badly, so far as numbers are concerned. Various inferences have been drawn from this, but the commonest one is that the influence of the press is overrated, that it really does not mould opinion, and that it constitutes, in political contests at least, what the French call a "quantité négligeable." Twenty-five years ago, certainly, any one forecasting the future of New York city politics would have ventured on two predictions—one that under no circumstances would you be able to unite the leading newspapers of both parties; second, that if you succeeded in doing so, their power would be irresistible. Well, they have been united, and their power has not been irresistible. Unscrupulous politicians may apparently disregard them.

This is a subject which, if treated at all by a newspaper, ought to be treated with entire frankness, and we mean to be frank about it. That the influence of the press has undergone great diminution in all parts of the country there is no denying. We hear the same story about it from every quarter. Nobody thinks of heeding, for instance, the country papers of New York. Most of them belong either to Platt or to some other boss. Everybody can tell what view they will take on any topic of the day without wading through their editorial articles. In fact, these articles are on important occasions supplied to the Republican papers by Platt himself, and many of these papers are subventioned by him. Their use is not to discuss politics, but to let the party know "what the old man wants." But it must be confessed that New York is worse off in this respect than most other States. In every other there are newspapers which make a fight, and often a successful fight, against the local boss. Chicago more nearly approaches our condi-

tion than any other city, though all cities, in some degree, resemble us. The united press of Chicago has, on two occasions, opposed the local Croker in vain. But, in spite of some brilliant exceptions, we think we may say without exaggeration that the rôle of the press in political discussion in America has so greatly diminished that, in some localities, the newspapers have ceased to have any part in it at all. What the press says does not count with political men as it used to count in the anti-slavery days, for instance, when no one knew where the Republican party stood or ought to stand without hearing from the New York *Tribune*.

When one comes to discuss the causes of this decline in influence, they seem patent enough. Fifteen years ago it was discovered by some clever speculators that there was a great deal of money to be made in journalism by newspapers of the type introduced by the late James Gordon Bennett, which made no pretence of earnestness, which printed everything that people would be likely to read, without regard to private feelings, or accuracy, or importance, and which, above all things, startled people, no matter how, by invention, by headlines, or pictures. Their success had a gradually growing effect on the older and more serious papers. It diffused through the whole newspaper world the idea that if you wished to increase your circulation you must do it, not by improving the quality of your matter, but by greater triviality, more personal gossip, more attention to the amusements of the community, less to its morals, or religion, or politics; more weddings, dances, lunches, engagements, more scandals, crimes, offences, and more queer things generally.

Every paper seemed to feel this in a greater or less degree. All "new features" were sure to be something childish or silly. At last there appeared on the scene journals containing nothing but a hodgepodge of pictures, sensations, lies, inventions, bogus interviews, ridicule of all the decencies and respectabilities of human existence, which in appearance and matter would seem intended simply for a lunatic asylum or a school of ill-taught boys. The notion that such papers are meant for sane adults would, in most countries, seem incredible. The most extraordinary part of the decline was the production of one paper which struck out the novel line of abusing and ridiculing everybody whom the community considered good or respectable, highly eulogizing the persons whom the community considered criminal or depraved, and treating most of the subjects which the community considered serious as good jokes, or fit subjects for ridicule. The success of this was very great for twenty-five years. The paper circulated among thousands of people passing for grave and decent, who enjoyed its paradoxes and its satire, and found its indifference to truth amusing; and the editor was invited to at least one college to lecture to the students on "journalism," and preserved until his death, among large numbers, a reputation for wit, scholarship, and general editorial "greatness." A generation grew up under his influence which naturally learned to doubt the value of everything but money, the sincerity of all reformers, the genuineness of all morality, and the utility of patriotism for anything but war.

The phenomena we are describing appeared most prominently in New York, but in some degree in every city. During the campaign of last year for sound money, the newspaper of largest circulation in New England expressed no opinion on one side or the other, but occupied itself during the canvass solely with crimes, scandals, sensations, pictures, and small gossip. That the press should, after fifteen years of this movement, after a generation had become accustomed to look to it mainly for fun and amusement, and hardly at all for conviction, or persuasion, or discussion, exert its old influence on opinion, is scarcely to be expected, and this old influence will not soon or easily be regained.

But it is a great mistake to suppose that, bad as things have been, the press in this city has achieved nothing. The vote for Low, brought about by a nomination made in a way unknown to this generation of Americans—that is, by the voluntary selection of some thousands of citizens—and supported in a canvass carried on by a few enthusiastic amateurs, men and women, could not have produced the result it did—the astonishing result, we may call it—without the agency of the press. For a few short months, we feel bound to say, the New York press was again its old self, talking seriously to men and women of the things which make for public peace and prosperity, in the accents which betokened a deep sense of the gravity of the occasion. Even the New York *World* used all its influence and its peculiar methods in behalf of the right cause; but here again the difficulty which newspapers have in rising "on stepping stones of their dead selves to higher things" was curiously illustrated. People are so used to seeing the display headlines and big pictures employed to attract attention to all sorts of follies, falsehoods, and trivialities, that they could hardly believe in the sincerity of an attempt to employ this same machinery on behalf of good government and good morals. Thousands who saw and liked the effective pictorial showing-up of Croker and Platt, must have felt very like an audience in the circus who, after listening a whole evening to the jests of the clown, suddenly see him assume the gown and bands and ask them to listen to a few remarks on life and death and judgment.

NAVAL REORGANIZATION.

If current report is correct, the deliberations of the Reorganization Board of the Navy Department are taking a turn which does not augur well for its projects. That so indefensible a scheme as that of amalgamating the engineers with the line should have received serious consideration, only shows how easily the best-informed men may be led astray by an argument having no solid foundation, if it only looks a little plausible. Such a measure as this would be the longest step we could take in a direction in which we have already gone too far—that of trying to make the line officer a jack-of-all-trades. A lieutenant in the navy, as his successive tours of shore duty come around, may be in succession an inspector of steel at the Carnegie works, a tester of the qualities of armor-plates, a superintendent of some branch of gun-manufacture, a professor of mathematics at the Naval Academy, a lecturer on naval matters at the War College, a meteorological investigator in the Hydrographic Office, and no one knows how many things else. It is not in human nature that one man should be able to do so many things well. The department has had some examples of this more instructive than flattering in connection with the inspection and testing of armor-plates; and it is not impossible that, if careful inquiry were made into other branches of the technical service of the navy, serious defects arising from the lack of omniscience on the part of officers would be brought to light.

Paradoxical as it may appear, the very excellence of the instruction given at the Naval Academy has been a factor in the evil. The curriculum is broader and more scientific than at West Point. The man who has learned many things is anxious to apply his knowledge as widely as possible. The obvious tendency of this education is to make naval officers desire the widest possible round of duties. Much of this duty is so important to the service and so well performed that it is a pleasure to call attention to it, while the utility of other portions is more or less doubtful. Of the best class is the work of the office of Naval Intelligence, which collects information from all sources that would prove invaluable in the event of a foreign war. The Naval Institute, not an official body at all, but an association among the officers themselves for mutual improvement, places their professional zeal in a very favorable light.

But there are other directions of naval activity in which the intelligent spectator will not find it easy to satisfy himself that the large expenditures result in any real good to the service. One of

these is the Hydrographic Office, of which the principal function appears to consist in the correction, reëngraving, and issue of British admiralty charts, and the collection of ocean meteorological observations. It also makes itself generally useful by establishing branch offices at the principal seaports where navigators can have their chronometers rated, their barometers tested. What all this costs, and whether it is really a profitable expenditure of the public money, no one outside the office itself can judge. Certainly to the critical observer the policy of the branch offices looks like paternalism—on a small scale, perhaps, yet in its most extravagant form.

The navy also runs what is supposed to be one of the finest astronomical observatories of the country, if not of the world, though astronomy is not included in the round of professions which the naval officer masters. It is not easy to see of what use the work of such an establishment can be to the naval service; and if current impressions are correct, it does scant credit to the service from a scientific point of view.

In the medley which has arisen from the necessity of finding suitable employment for the body of well-educated young men annually turned out by the Naval Academy, and adjusting their official positions and relations, we are losing sight of the prime objects and requisites of the service. Some thirty years ago one of our most distinguished admirals took the common-sense ground that the great object of the education of a line-officer was to teach him how to handle his ship and fight her guns. The efficiency of the line should be the main end in sight in every project of naval reform. The inefficiency of our system, under which an officer does not reach the lowest command rank till he is nearly fifty, and is about sixty before he can possibly become a rear-admiral, and the relative superiority of the English system under which a rigorous method of selection and exclusion leads to high command being given only to those best fitted for it, are so well understood in naval circles that no reiteration of the argument is necessary. Two years ago a strong movement, officially backed by the Navy Department, was initiated to devise a remedy. Of course, difficulties were met in arranging the details, though there appeared to be practical unanimity as to the general character of the measure to be adopted. But just as a satisfactory conclusion seemed to be approaching, the subject was dropped for reasons not known to the outside world, and a new question took its place.

The engineer corps of the navy is now recruited from the Naval Academy. In the first years of the course the instruction is the same for all cadets; it is only at the end of the third year that a separation is made of the cadets best qualified as engineers from those best qualified as officers of the line. The latter arm is naturally preferred by the active and ambitious cadet, for the obvious reason that it alone offers the glamour of the highest rank, responsible command, and possibilities of fame as the hero of a battle. To what extent the wishes of a cadet govern the action of the authorities in deciding to which arm he shall belong, we are unable to say, but it certainly would not be wise to ignore his tastes in one direction or the other. At the close of the course the technical education of the engineer is as thorough as that of the midshipmen, and he may fairly claim that a part, at least, of his subsequent duties are equally important with those of his comrade of the line, and require a higher grade of purely scientific ability. He has, therefore, for two years past, appeared before Congress and the department as a claimant for the same rank and authority as the other. This claim is enforced by the further one that the corps is not sufficient in number to man the new navy, and that its condition must be improved to attract the best men to it.

In the discussion of the questions thus raised, certain capital facts have been overlooked. The engineer corps has two quite distinct functions. One is to design engines, superintend their construction, devise the tests which they must undergo, and use the knowledge derived from such tests to make improvements. This function requires the highest grade of technical training and scientific ability, combined with long experience. The other function is to run the engine after it is built, know its qualities, and repair it when necessary. This requires no higher skill than that of the well-trained mechanic. The solution of the difficulty seems to us obvious. The distinction between the two functions of the corps should be recognized. The highest corps, the engineers proper, should be assimilated to the present corps of naval constructors. If it were considered best that the corps should have experience with the working of engines at sea, one member of it woul suffice for each important ship, instead of three, four, or five, as at present. The lower corps of engine-drivers coul then be organized without difficult, because its members would need no scientific education. The claim now made by the engineers that the functions of the engine-driver are of equal importance with those of the commanding officer of the ship, will not bear examination. Through all the heat of battle, or at a moment when the ship must be kept off the rocks by every possible device, the management of the engines is no harder than at any other time, while the fate of all on board may depend on the skill and cool judgment of the captain. All the engineer has to do is to attend to the signals and pull his levers accordingly; he need not even know that a battle is going on, or breakers raging in the neighborhood.

It is to be regretted that our naval authorities do not learn more from the experience of the merchant marine. The most skilful navigation is as necessary to the lines of ocean racers as it ever is to a war vessel. We all know to what perfection the make and running of the engines of these great liners have been brought, and how necessary this perfection is to commercial success. Yet the men who run these engines have no high theoretical training and would not think of designing an engine. Every one can see how extravagant it would look for a company to employ three or four educated and experienced designers of engines as engineers on every mail steamship. The application of this experience to the naval situation is obvious. The engineers afloat need not, for the most part, even be commissioned officers. A corps of warrant engineers, ranking next above that of the gunners, is all that is really required, and would be excellently adapted to satisfy all the requirements of the service. Practical experience in the mechanics of engine building would be the most important requisite, and this could be better acquired in engine works than at the Naval Academy.

POPULISM IN COLLEGES.

The Kansas State Agricultural College at Manhattan five years ago was the largest institution of its kind in the country, and stood in the front rank in point of merit, if it was not, indeed, entitled to be considered the best. It was visited by experts from all over the United States, and many of the younger colleges in the West were modelled after it in general course of study and adaptation to the preparation given in the public schools. Since 1879 it had been under the presidency of Mr. George T. Fairchild, who went to Kansas after fifteen years of experience in the similar institution maintained by Michigan, and who steadily added to the excellent reputation which he brought with him.

The college had a four years' course, leading to the degree of bachelor of science, this course being thoroughly disciplinary in matter and methods, but so combined with training of hands as to lead evidently into the industries. Agriculture and horticulture in all their bearing, naturally and properly, had chief place,but mechanics had grown to a rank only a little lower. Post-graduate courses were provided for the special preparation of teachers, investigators, and expert workmen. There were nearly 700 undergraduates and over 40 graduate students, several of the latter from university courses. Attendance was growing at the rate of 13 per cent. a

year, and 70 per cent. of the students came from the homes of the farmers, for whose especial benefit agricultural colleges were established. The officers of the college held highest places in the Association of American Colleges and Experiment Stations, and its graduates took the first rank as students in university courses at Ann Arbor, Chicago, and elsewhere, and as teachers and investigators all over the Union.

Such was the condition of the institution in 1892—thoroughly established, well officered, with a faculty of twenty-four teachers and sixteen assistants and minor officers, selected because of their special fitness for the positions, equipped with library, museums, laboratories, shops, and plantations inventoried at $415,000—prosperous and needing only to be left alone by the State Government after the regular appropriation in its behalf had been made by the Legislature. In the fall of 1892 the Populists carried the State, elected their candidate for Governor, and secured four of the seven regents; their representation was increased to six in 1894, and they continued to have a majority of the board until 1896, while two of their members did not retire until the spring of 1897, when the board was reorganized so as to give them a majority for the next four years.

Immediately after the victory of the People's party in 1892, ex-Congressman Kelley, who had left the Republican party when his term in the House expired the previous year, attacked the State institutions of learning through the press for neglecting entirely political economy in their courses of study, and on the strength of this he was appointed a regent of the Agricultural College. At the first meeting of the board he repeated his charge, although, as a matter of fact, a full term's work in political economy had always been required in the senior year, and he insisted that, in addition to this work, lectures should be introduced to continue through the course. Early in 1894 C. B. Hoffman, who had long been prominent in socialistic agitation, as well as for connection with the notorious community attempted at Topolobampo, Mexico, became a regent and an ardent supporter of Kelley in his plans for teaching "the new school of political economy." Between them they ordered, in place of the established Friday lectures by members of the faculty in rotation, the introduction of thirteen lectures on political economy to "treat of the subject consecutively, commencing with the primary concepts of the science," the resolution providing that "the principles maintained by the advocates of land nationalization, public control of public utilities, and the reform of the financial and monetary system shall be fairly stated and candidly examined, with a view of leading the student to grasp the principles involved in the science of production and distribution without bias or prejudice."

During the following summer the President and faculty were directed so to rearrange duties and positions as to fill the position of the professor of physics, who had been granted leave of absence, "and leave vacant instead some full chair which shall include political economy," this action taking the teaching of political economy from the duties of President Fairchild; and the committee on employees was authorized to open correspondence "for the purpose of securing a competent professor to fill the chair of political economy." Quite characteristically Hoffman, who undertook the correspondence, applied for advice to the editor of the Boston *Arena*, and, at his suggestion, Prof. T. E. Will, a Harvard graduate, who, after two years of experience in college work at Appleton, Wis., had lost his place, and was lecturing as opportunity offered in Boston upon social and economic questions, was engaged to teach political economy in the course, including the thirteen lectures already provided for. These lectures were socialistic in their nature, and the professor often made statements of doubtful authority—newspaper clippings, and the like—the basis of reasoning, though more often of innuendo.

In the spring of 1895 the regents directed the faculty to submit a plan for so changing the course of study as to "give not less than six terms' " study of economic sciences, including one term of history, one term of civics, and one term of psychology. The faculty protested that the course was already full, and that to crowd it with additional terms in these studies by excluding others or by electives would reduce its effectiveness for its prime purposes; and therefore urged a compromise by offering a course of five years, with electives in the last two. This plan, after some hesitation, was accepted by the board; but the movers of the resolution, and Prof. Will, were much disappointed, and held the older members of the faculty responsible for their failure.

After the Populist victory in the State election last fall, the leaders of the party made it plain that the Populization of the college would be carried still further. The Legislature passed a law which secured the Populists a majority of the regents for four years, the five new members thus appointed being Kelley, Hoffman, a local politician once associated with Hoffman in the Topolobampo scheme, the wife of ex-Gov. John P. St. John, and an ex-Congressman, all of whom afterwards admitted that they had been pledged beforehand to a reorganization of the institution. This soon followed. Although previous action of the board had fixed the salaries until September, 1897, and although not only precedent but printed regulations provided that employees, "after satisfactory trial, hold their places till resignation or removal for cause, with due notice on either side," a resolution was adopted defining the term "school year" used in one of the acts of the Legislature, and providing "that the term of employment of all present employees is hereby declared to expire on June 30, 1897," thus defrauding those who might be dismissed of the pay to which they were entitled for three months. President Fairchild promptly tendered his resignation, which Hoffman told him would have been asked for, not because he had failed as an efficient executive, but "because he differed from the board upon fundamental principles of distribution of wealth"; and later twelve of the twenty-four teachers and six of the sixteen subordinates were dismissed, among them most of the older members. The course of study has been rearranged by the introduction of additional required work in economic science, at the expense of mineralogy, zoölogy, physiology, psychology, and logic; while industrial training in agriculture and horticulture and all agricultural study after the second year are made optional—this in an agricultural college!

Such is a brief summary of the story told in the *American Journal of Sociology*, in a modest, yet self-respecting and straightforward way, by President Fairchild. Well may he conclude by saying, "I tremble for the future of State educational institutions."

THE PASSING OF NAPOLEON IN 1815.

LONDON, November, 1897.

Everything that relates to Napoleon appears to to have a fascination for the present generation. The press continues to print volumes of memoirs and what-not relating to the great soldier and his times. But, hitherto, the simple record of the log-books of the ships-of-war in which he was convoyed from Rochefort to England, and from England to St. Helena, has not been published, although diaries and journals and narratives relating more or less to these voyages have been made public. The subjoined extracts from the logs give such scant particulars as, in the matter-of-fact language of sailors, tell of the embarkations and debarkations of Napoleon.

In those days it was usual to have two logs on board a man-of-war, one kept by the Captain, the principal combatant officer, and the other by the Master, the chief navigating officer. As a matter of fact, it would appear that the Captain's log was really written up by a lieutenant. The main extracts, given below, are from the logs of the masters of the *Bellerophon* and the *Northumberland*. The Captain's log of the former ship has been extracted from, but the writer of these notes has not traced that of the *Northumberland*. Some short extracts have been added, below, from the log of the *Myrmidon*, a ship that sailed in company with the *Bellerophon* from Rochefort.

The fact that the British officers had taken on board the *Bellerophon* a conqueror before whom all Europe had paled, would

hardly be gathered from the plain, matter-of-fact entries in the Captain's log of the *Bellerophon*. That on the 15th of July says: "Rec^{d} on b^{d} Napoleon Buonaparte and suite for a passage to England." Then, on the 7th of August, it is recorded: "Fine pleasant w^{r}. Disch^{d} into H. M. S. *Northumberland*, for a Passage to St. Helena, Napoleon Buonaparte, Marshal Bertrand, Genls. Monthalon and Gorgou, Count Lascass, & their servants. Weighed & made sail, in c^{o} with Squadron." There was no sentiment in the matter. It was a mere matter of business with the officer whose duty it was to write up the Captain's log; he did not even trouble himself to learn the correct spelling of most of the names of the faithful followers of fallen greatness.

One cannot but wonder what was passing through the mind of Napoleon when, at 6 P. M. on the 14th of October, the island of St. Helena was sighted from the *Northumberland*. It will be seen that the landing did not take place until the 17th of that month. The only preface that appears to be necessary to the introduction of the following extracts is to remind readers that Captain Maitland of the *Bellerophon* had rejected Napoleon's first offer, which was to surrender, subject to the privilege of his being allowed to go to the United States. Unconditional surrender alone would Captain Maitland accept. The log was kept by Stephen P. Vale, Master:

July 13th, 1815. At single anchor off Rochelle. P. M. Observed the White Flag all along the Coast. Hoisted the White Flag at the Main and stood up for Rochelle. At 10 sent two boats to Row Guard during the night.

July 14th. At single anchor off Rochelle. A. M. Boats returned from Guard. At 5 answered a Flag of Truce from a French schooner. At 8.30 Truce returned to Isle d'Aix.
P. M. At 6.15 saw a Barge coming from the French Frigates. Answ^{d} a Flag of Truce from D^{o}. At 7.30 she came alongside with several French Officers. At 9.30 Truce Boat parted company. At 10.20 came alongside a Boat from Rochelle.
[Under this date the log of the *Myrmidon* notes: "P. M. A Boat with a Flag of Truce from Buonaparte went alongside *Bellerophon*."]

July 15th. At single anchor off Rochelle. A. M. Guard Boats returned. Observed a French Brig and schooner coming down with a Flag of Truce. Answ^{d} D^{o}. Sent boats to the brig. At 7 received by the same NAPOLEON BUONAPARTE, late Emperor of the French, and his suite. At 10.30 anchored H. M. S. *Superb*. Employed in getting luggage, &c., on board at Noon.
[Under this date, the Captain's log has the following laconic entry: "A. M. 7. Rec^{d} on b^{d} Napoleon Buonaparte and suite for a passage to England." The Log of the *Myrmidon*, in similar style, says: "Buonaparte and suite embarked on board the *Belleroph n*, for a passage to England."]
P. M. At 5.55 up Boat and parted Compy with the French Brig. At 7.40 up all Boats.

July 16th. At single anchor off Rochelle. A. M. At 10 the late Emperor Napoleon Buonaparte and the Capt^{n} went on board the Admiral.
P. M. At 12 40 manned the yards on the return [of] Buonaparte. In Boats, and up anchor. Hove to. Sent a boat to *Superb*. At 3.20 filled and made sail out at 4. *Myrmidon* in company.
[Under this date the log of the *Myrmidon* records: "Received 7 French Officers and 10 servants from *Bellerophon*, being part of Buonaparte's suite."]

July 20th. A. M. Saw a strange sail to the North-w^{d} at 7. Exchanged N^{o} with the *Swiftsure* at 8. Hove to. Had communication with *Swiftsure*. At 8.30 discharged Pilot into *Swiftsure* and made sail at Noon.

July 23d. Sunday. P. M. At 7 saw the Land on the W^{r} Bow, N. N. E. The Deadman. Off Shore 7 or 8 leagues.

July 24th. At single anchor in Torbay. A. M. At 6.30 sent two officers on shore with despatches. At 7 shortened sail and came to in 7 fms with the B. Bower in Tor Bay. Paignton Church S. W. & W. Sent a Boat for Water.

July 26th. A. M. Moderate Breezes and clear. At 4 weighed and made sail. At 8 squally. *Myrmidon* and *Slaney* and several other men-of-war in company. At 9 shewed our number to the Matros (?) tower.
P. M. Running along the Coast, and tacking occasionally for Plymouth. At 3.50 shorten'd sail and came to with the best B^{r} on the Sound. Moored ship a cable each way. Breakwater Light vessel.

July 27th. Boats rowing Guard round the ship.

July 28th. Boats rowing Guard round the Ship

July 31st. A. M. Lord Keith and an Officer with Despatches. [Sir Henry Bunbury—Captain's log.] Boats rowing a strict Guard round the ship.

August 2nd. Boats rowing Guard round the Ship.

August 3rd. Boats rowing Guard round the Ship.

August 4th. At 7 30 answered signal to unmoor. Unmoored accordingly, and hove short on the Bst Bower at 8. At 11.30 lowered sails and weighed and proceeded out of Plymouth Sound at Noon.

August 5th. A. M. Standing off and on shore, off the Bolt. P. M. Standing off and on the Land.

August 6th. A. M. At 9 exchanged N^{o} with H. M. Ship *Northumberland*. Joined D^{o}, and hove to, and had communication at noon.
P. M. At single anchor. Bury Head N. & E 3 miles. At 3, shortend sail and came with the best Bower to anchor in 19 f^{tms} Water, between the Berry Head and the Froward Point. Furled sails. In company with the Admiral, *Northumberland*, *Eurotus*, and several storeships.

August 7th. At single anchor between the Berry Head and the Froward Point. A. M. At 10, Admiral Sir Geo. Cockburn came on board. Employed in sending Buonaparte's luggage to the *Northumberland*. At 11, sent Buonaparte's servants to the *Northumberland*. P. M. Light Breezes and fine weather. At 2, Admiral Lord Keith left the ship with Napoleon Buonaparte, to go to the *Northumberland* to be by her conveyed to St. Helena.

Under this date (August 7th), the Captain's log says:

A. M. Boats employed in carrying the baggage of Napoleon Buonaparte & his Suite on board H. M. S. *Northumberland* 10.50 came on board L^{d} Keith and Sir George Cockburn.
P. M. Fine pleasant w^{r}. Disch^{d} into H. M. S. *Northumberland*, for a Passage to S^{t}. Helena, Napoleon Buonaparte, Marshal Bertrand, Genls Monthalon and Gorgou, Count Lascass, & their servants. Weighed & made sail in c^{o}. with Squadron.

The following extracts from the log of the *Superb* bear upon the transactions of July 15th and 16th, mentioned above:

July 15th. A. M. Running in for Basque Roads. *Bellerophon* with a Flag of Truce flying, in the Roads. At 11.20 shortened sail and came to. Found here H. M. S. *Bellerophon* and *Myrmidon*: the former having Napoleon Bonaparte on board.

July 16th. A. M. Manned ship, to receive Napoleon Bonaparte.

Extracts from the Master's (John Tucker) log-book of the *Northumberland:*

August 7th. A. M. At 11 General Buonaparte came on board from H. M. S. *Bellerophon* accompanied by Lord Keith and the following French Officers, viz^{t}, Count Bertrand, his wife, 3 children, a servant and her child, General de Montholon, his wife, 1 child, and a female servant. General Gourgoud, Count de Las Casas and his son, 9 servants, and a Surgeon.
P. M. At 7.45 weighed and made sail.

August 8th. P. M. Lying to, off the Eddystone Light.

August 9th. A. M. At 9, filled and came to the w^{r}. on the Starboard Tack, & made all possible sail: the following ships in c^{o}. *Havannah*, *Ceylon*, *Bucephalus*, *Zenobia*, *Zephyr*, *Ferret*, *Redpole*, *Icarus*.

From the 24th to the 26th (A. M.), the *Northumberland* was standing off and on, or lying-to, off Funchal. Other ships anchored in the bay.

August 24th. A. M. The Portuguese Consul [Governor?] came on board.

October 14th. P. M. 6, saw the Island of S^{t} Helena, bearing W. N. W. 13 Leagues. 6.45, Took in the studding Sails. 8, Took in Top Gallant Sails, hauled up the Foresail, hove to and double-reefed the Topsails. 9.30, Filled. 11, Hove to.

October 15th. A. M. Moderate breezes and cloudy W^{r}. 4. D^{o} Weather. Daylight, the extremes of S^{t} Helena Island. N. W. b. W. to West, off shore about 16 or 17 miles. 6.40, filled and stood in for the Island. 10.45, shortened sail and anchored abreast of James's Valley in nine fathoms. Moored ship with a whole cable each way. The Steeple of James's church bore S b E ¼ E, Landing Place S. E b E. Sugar Loaf Point E N E. Furled Sails. Found at anchor, H. M. Ships, *Havannah*, *Peruvian*, *Icarus*, *Zenobia*, *Ferret*, *Redpole*—*Lady Carrington*, extra Indiaman, *Theodosia*, merchantman and Company Schooner.
P. M. Moored at S^{t} Helena. Moderate and Cloudy W^{r}. Hoisted out the boat and Launch. The Fort saluted the Admiral. Returned D^{o} with the usual number of Guns. Sunset, in Boats. 9, Sent a Boat to row Guard.

October 16th. A. M. Moderate and Cloudy Weather. Daylight, Guard Boat returned. Employed about the requisite duty of the ship.
P. M. Moderate and fine.

October 17th. A. M. Light Breezes and Cloudy Weather.
P. M. Light winds and fine. Employed landing Artillery Stores. Landed General Buonaparte and Suite.

October 18th. A. M. Light Winds and Cloudy. Employed landing Artillery Stores, and the luggage of General Buonaparte.

October 23rd. P. M. Sent the Carpenter and his crew on shore, to build houses for the reception of General Buonaparte.

October 25th. Fresh Breezes and Cloudy, with frequent showers of rain. Sent a working party of 100 Seamen on shore, under the direction of a Lieutenant, to assist in building houses for the reception of Gen^{l} Buonaparte.

October 26th. Sent the working party on shore to carry plank from the Town to Longwood, for the purpose of building apartments for General Buonaparte.

October 27th, and several subsequent days—"Sent the working party on Shore," or to Longwood.

Correspondence.

INEFFECTUAL PROTECTION.

TO THE EDITOR OF THE NATION:

SIR: We have had in Boston a foreigner named Darwin, who has been explaining tides by theories "made in England." At one of his lectures he showed certain models of planetary forms on which, as he informed us, he had paid a duty of $5.25. This duty was, of course, intended to protect our scientific men from the ruinous competition of foreigners like Prof. Darwin, who is said to have something like a monopoly of knowledge of tides. But why should we stop at models and instruments? If ever we are to have a truly American tidal science, a tariff on lecturers ought to include these foreign intruders. If we can learn to make tin-plate, why not to lecture on tides?

JAMES HATTRICK LEE.

MILTON, MASS., November 17, 1897.

TRICKS IN FOOTBALL.

To the Editor of The Nation:

Sir: A recent editorial in the *Evening Post* spoke of the number of "tricks" the football teams "play" on each other, which, being interpreted, too often means frauds perpetrated on the opposing team.

Last spring a Southern baseball team took a professional with them and won two victories. On their return they were promptly required to disband, and the faculty of their college sent their apologies to the faculties of the two institutions from which these fraudulent victories had been gained.

This fall I happened to know of another Southern college whose team smuggled an outsider into the train after they had left the home station. By this means they won a decided victory, and were full tilt to play that same outsider in a game with a second institution. This second fraud was prevented only because one of the faculty of the institution to which the travelling team belonged heard of the thing, and took quite a trip so as to join the team and prevent the repetition of the cheating. This team, too, was required to disband, and the faculty voted that its apologies be sent to the institution whose team was unfairly defeated.

The argument used to defend and justify such a procedure—used even by Christian students, I am sorry to say—is: "They all do it." But

> "The Ten Commandments will not budge,
> And stealing will continue stealing"—

even if it is a match game stolen from a team that would readily steal, too, if it could.

THE SELDEN SOCIETY'S PROGRAMME.

To the Editor of The Nation:

Sir: I have recently received from England the following full account of the plans of the Selden Society, which will, I hope, be of interest to those of your readers who care for its work in the publication of legal and historical sources:

The volume for 1898 is passing through the press. It will consist of Extracts from the Records of the Court of Requests edited by Mr. I. S. Leadam. Hitherto the Court of Requests has been little more than a name to historians and lawyers. They have known that a court bearing this title branched off from the King's Council, that it at one time affected to be "a poor man's court," that it administered "equity," and that finally it was suppressed as unconstitutional. It is not too much to say that Mr. Leadam has for the first time written the history of this court from its beginning under Henry VII. to its extinction under Elizabeth and James I., and thereby will make a substantial addition to our knowledge of the law of the sixteenth century. Many of the cases which come before this court are admirable illustrations of the social and economic state of England during the Tudor period. As the evidence given by witnesses is recorded at full length, the student of life and manners will not in this instance have to complain that the interesting facts are concealed from him by legal technicalities. The court was much resorted to by those who had complaints to make against their landlords, and we may see in its records many phases of those new agrarian movements which are distinctive of the transitional age that lies between mediæval and modern history. At the same time, the lawyer will find abundant points of interest in the endeavors of this court of "equity" to remedy some of the more obvious deficiencies of the old common law, and the constitutionalist will be able to study at large in Mr. Leadam's Introduction one of the first of those reactions against the Tudor system which herald the great revolution of the seventeenth century.

For 1899 a volume is being prepared by Mr. G. J. Turner which will contain copious extracts from the rolls of the Forest Courts. Every one knows that a complicated and severe Forest Law, fashioned in the interest of kings who were mighty hunters, lay heavy on mediæval England. But hitherto the workings of this code have been but insufficiently illustrated by authentic documents. It is hoped that Mr. Turner's book will add much to what is known about this important matter, and will incidentally throw new light on the history of the chase.

A volume of extracts from the records of the Exchequer of the Jews is also in contemplation. But the Council is minded to mark the year 1900 by a new experiment, namely, an endeavor to place in the hands of subscribers a portion of the Year Books. The admirable work done by Mr. Pike, in his edition of those Year Books of Edward III.'s reign which had not previously been printed, has brought into strong relief the innumerable faults of the old black letter editions. The Council have no intention of trespassing on the field that Mr. Pike is making his own, and for this among other reasons they are proposing to begin at the beginning; in other words, to begin with a new edition of the Year Books of Edward II. They have in contemplation a text based on the best manuscripts and accompanied by an English translation and by references to the plea rolls. It is proposed to entrust this work to Mr. F. W. Maitland and Mr. Turner. The plan which is at present in contemplation is that of issuing a volume of Year Books in every other year, *e. g.*, in 1900, 1902, and 1904, so that volumes of Year Books will alternate with volumes derived from other sources.

It is hoped that this new departure will meet with approval in America, where the value of the Year Books, even in their present condition, has long been well known and Mr. Pike's volumes of new Year Books have found a warm welcome. The success of the project will depend largely on the opinion that is entertained of it in America. Should it succeed in attracting subscribers, the Society may hereafter be able to accelerate the process of publication by issuing more than one volume in the year. And in this case Edward II.'s reign of twenty years might soon be traversed and another reign might be attacked. For the time being, want of funds compels the Society to proceed tentatively and with caution, and not to announce any programme that is too ambitious to be put in hand; but it is time that a beginning should be made, and that the nineteenth century should not pass away without an effort to set before English and American readers, in a creditable and intelligible form, some part of those ancient reports of decisions and discussions which have too long been disguised from modern readers by misprints and other blunders. The Year Books are by far the most distinctive monuments of "the common law"; indeed, they stand alone in the history of the Middle Ages, marking off "the common law" from all other systems, and the Selden Society would not be performing its duty if it did not try to redeem them from their present pitiful plight.

Yours very truly,

Richard W. Hale,

Secretary and Treasurer of the Selden Society for the United States.

Boston, November 13, 1897

Notes.

Houghton, Mifflin & Co. will be the American publishers of Mr. W. J. Stillman's latest collection of articles, 'The Old Rome and the New,' and promise the volume for December.

D. C. Heath & Co. have nearly ready an 'Elementary Scientific French Reader,' by Mme. P. Mariotte-Davies, Professor of French at Purdue University; and 'Voltaire's Prose,' representative selections by Profs. Cohn and Woodward of Columbia University.

Two historical novels are to be added to the host now pressing on the public attention, by Lamson, Wolffe & Co., Boston. They are 'Mademoiselle de Berny: A Story of Valley Forge,' by Pauline Bradford Mackie, and 'Vivian of Virginia,' by Hulbert Fuller.

Charles Scribner's Sons are on the point of issuing 'Audubon and his Journals,' by a granddaughter, Miss Marie R. Audubon, with annotations by Dr. Elliott Coues; 'The Workers: An Experiment in Reality—The East,' by Walter A. Wyckoff; a "Homestead" uniform edition of the complete verse and prose of James Whitcomb Riley; 'Lullaby-Land,' selections from Eugene Field's child-poems, with illustrations by Charles Robinson; 'Gloria Victis,' by J. A. Mitchell, editor of *Life*; and a 'History of Our Navy,' by John R. Spears.

E. P. Dutton & Co. have nearly ready 'In Garden, Orchard, and Spinney,' by Phil. Robinson.

'An Elementary Spanish Reader,' by Prof. M. M. Ramsay, is announced by Henry Holt & Co.

Thomas Whittaker will publish 'Lessons from Life, Animal and Human,' with an introduction by Dr. Hugh Macmillan.

Dodd, Mead & Co. will issue 'The Conquering Turk,' by G. W. Steevens, author of 'The Land of the Dollar,' and correspondent of the London *Daily Mail* in the late Greco-Turkish war; and a translation of 'Lumen,' Flammarion's new novel.

'A History of Greece for High Schools and Academies,' by George Willis Botsford of Harvard, is promised by Macmillan Co.

J. B. Lippincott Co. have in press 'Symphonies and their Meaning,' by Philip H. Goepp, and 'Men, Women, and Manners in Colonial Times,' by Sydney George Fisher.

'A History of Woman' is the title of a work, already far advanced in preparation, intended to be "a scientific study of her social, moral, and intellectual development." The author, Mr. George Willis Cooke, of East Lexington, Mass., feels the need of aid in advance subscriptions before undertaking publication of his three volumes of 500 pages, and a committee to further that end has been formed, with Mr. William Lloyd Garrison, No. 35 Federal Street, Boston, for treasurer. A subscription of $10 per annum for three years is solicited.

On the invitation of Lord Acton, general editor of the "Cambridge Modern History," now publishing in twelve volumes, Mr. Melville M. Bigelow of the Boston bar will write upon the period of American history from 1775 to 1789 on the Constitutional side.

Edward Arnold is about to bring out 'The British Mission to Menelik (1897),' by Count Gleichen; 'Benin,' Commander Bacon's account of the expedition to avenge the massacre of British negotiators at the "City of Blood"; and 'Rowing,' by R. C. Lehmann, the Harvard coach.

T. Fisher Unwin, London, announces 'Rapara; or, the Rights of the Individual in the State,' by Archibald Forsyth; 'Lives of the Great Italians,' by Frank Horridge; and a 'Life of William Harvey,' by D'Arcy Power, F.S.A.

Georg Reimer, Berlin, has in the press the ninth edition of Ernst Haeckel's 'Natürliche Schöpfungsgeschichte,' which, in revision, has had the benefit of his researches during the past thirty years, as will appear in the second part, particularly, and in the "tree" of organic evolution. The twenty

original plates of illustrations are increased to thirty.

Mr. John Fiske's 'Critical Period of American History' has an assured place in libraries popular and scholarly. Its worth lies in the presentation of an epoch, rather than in the author's opinions, some of which, like those on the worldly wisdom of the pro-slavery compromises of the Constitution, have, we observe, suffered no change in the revision to which Mr. Fiske alludes in the preface to the new and elegant illustrated edition just issued by Houghton, Mifflin & Co. It is the illustrations which really distinguish the reissue, and the same sensible course has been pursued as in the case of the work to which this is a sequel, Mr. Fiske's two-volume 'American Revolution.' In both, everything purely fanciful has been excluded, to make way for portraits, maps, authentic views, facsimiles of contemporary documents, maps, etc. Each picture is honored with a description of its source. The portraits naturally outnumber all the other modes of illustration, and are in the main excellent copies. There is a curious portrait of John Adams, whose Dutch origin is unmistakable; and one can as clearly read "drawn by a Frenchman" in St.-Mémin's fine profile of Jefferson, who might be taken for a Girondist. The binding of the volume is in accord with the admirable paper and presswork.

The same publishers have launched anew Thoreau's 'Walden,' in two volumes as heretofore, but adorned with a considerable number of pertinent photogravures—portraits of the hermit and his Concord friends, views of the Pond and its neighbor waters, of Concord, of Thoreau's and Emerson's homes, of the River and its meadows, etc., etc. Mr. Bradford Torrey's introduction is at once sane and sympathetic. This edition must find many admirers.

Finally, Houghton, Mifflin & Co. have revived Charles Dudley Warner's 'Being a Boy' (*temp.* 1830-1850, "before the use of lucifer matches"); a history, he explains, less autobiographical or biographical than typical. It is now fortified with well-chosen photographic illustrations of the phase and of the locality by Clifton Johnson, who gives us many a characteristic New England landscape and usage in remarkably unconscious *tableaux vivants*. The book commends itself particularly to those who are familiar with the Deerfield River valley in Massachusetts.

From Charles Scribner's Sons we have a truly luxurious edition of Mr. Cable's 'Old Creole Days,' with uncommonly clever and fitting illustrations by Albert Herter. Each of the seven short stories which display the properties available for the novelist's longer efforts, has a full-page design accorded it, as well as a headpiece and tailpiece and an ornamental initial letter. The text is a fine specimen of the work of the University Press, Cambridge. To our mind, the printer and illustrator have surpassed the binder, so far as relates to the decoration of the cover, which is not in harmony with the dignified interior.

Timely is the reappearance, in the Cameo Edition of the Messrs. Scribner, of the Rev. Henry Van Dyke's 'Poetry of Tennyson,' "a book of essays in vital criticism," which has shown the vitality of frequent revision, responsive to the fresh calls for it, in the eight years since it was first published. Mr. Van Dyke will not allow a third greatest poet after Milton and Shakspere except Tennyson. The same author's pleasant 'Little Rivers,' still flowing on, forms a companion volume to the foregoing.

Mr. Harry Fenn's graceful pencil we welcome again in the 'In Memoriam' for which it furnishes the pretext (Fords, Howard & Hulbert). The draught on the artist's ingenuity was heavy, involving headpieces, initials, and tailpieces for every canto, and some inequality there must needs be; but the best of these drawings are admirable, and the decorative sense is seldom at fault. Mr. Van Dyke furnishes an analytic introduction to the poem which can be read with profit. Spenser's 'Shepheard's Calendar' (Harpers) makes a square volume on whose ornamentation Mr. Walter Crane has exercised his talent in his familiar manner, in a constantly recurring border and in full-page symbolical designs for the monthly eclogues, that for October seeming to us the best. The type is a full black face, archaic in its suggestion. A glossary brings up the rear. This handsome edition is likely to meet with much favor. Mr. Clifton Johnson appears again as the clever illustrator by photography in the new edition of Jane Barlow's 'Irish Idylls' (Dodd, Mead & Co.). These thirty views of the Connemara boglands of western Ireland, their dwellings and inhabitants, were made on the spot for their present purpose, and are an unquestionable enhancement of the charming text. Their photographic origin is artfully veiled by the graver. The printing has been beautifully executed by the University Press, Cambridge. Rosie M. M. Pitman's pen-illustrations to 'Undine' (Macmillan) have the value of etchings, and combine grace and mysticism in a degree commensurate with the fable. One may see in them echoes of Blake and of Dürer, but as a whole they have a distinct individuality, and in the abundant figure-drawing are much less amateurish than women's work in this vein is apt to be. This remark however, is truer of the small-scale figures than of the larger, as is seen in No. 48. The symbolism is carefully explained in the list of illustrations.

We noticed in the spring the concluding part ii. of Gardner's 'Handbook of Greek Sculpture,' and Macmillan has now combined both parts in a single volume at a very reasonable price. The paging is continuous and there is a general index; but each part retains its index of sculptors. There are no fewer than 130 illustrations in this admirable work.

Prof. G. H. Palmer's 'Self-Cultivation in English' (T. Y. Crowell & Co.) is a little book of thirty pages, apparently first written as an address. It deals in a very general way with the art and habit of composition, and is studiously careful to avoid any but the simplest and most fundamental precepts. It will, however, open the eyes of tyros to the main principles on which success in writing rests, and even the experienced may read it with profit.

Lest any reader be puzzled to know how a treatise of three hundred-odd pages could be written on so seemingly specialized a subject as 'The Occasional Address,' it should be explained at once that Prof. Sears, in his recent volume under that title (G. P. Putnam's Sons), has construed the phrase in its exacter meaning, and has produced what is practically a text-book of general oratory, with emphasis on certain special forms, such as the Eulogy, the Commencement Oration, the Political Speech, "After-Dinner Remarks," and other speeches for occasions. The result of this attempt is an old-school treatise on rhetoric, respectable and even interestingly written in its kind, but far too much overweighted with rhetorical history and old-fashioned rhetorical classification to be of much practical assistance in "the production of the Occasional Address." The author is in error in stating (p. 80) that Sir Thomas Wilson's 'Arte of Rhetorique,' 1553, was "the first text-book of composition and criticism in our language." Essentially the same in kind and a quarter-century earlier in date is 'The Arte or Crafte of Rhethoryke,' by Leonard Cox, an excessively rare but very interesting document in the history both of English criticism and of the Humanism in England which centres around the names of Colet and Erasmus. It would be a pious contribution to English studies for some British or American scholar to edit and make accessible this little treatise.

In the three hundred pages of the attractively printed 'Story of an Irish Sept' (London: Dent & Co.) we have comparatively little about the Sept, and much concerning the history of Ireland and the manners and customs of its ancient inhabitants. The book is written in a kindly and sympathetic spirit. The student to whom special works of reference upon the subject are not available, will find it to contain much reliable information. The burthen of the author's message to his readers is the continuity of temperament in septs and peoples derived from long-continued environment. His narrative tends to confirm his theories. Out of a sad cloudland of strife, individuals of his sept and ancestry emerge upon the last fifty pages. One fought thirty duels, "and was never wounded," before he reached manhood. Another, a personal friend of Nelson, was tried for his life, having shot his man in a duel arising from a dispute concerning a dog-fight The last member mentioned perished on the Alps. The author has no belief in the capacity of his countrymen to work independent parliamentary institutions. He looks rather to a complete scheme of land purchase and minor reforms for the regeneration of that country whose past he has so carefully studied.

A new series of English versions of military works is begun by Capt. James of the British Army, under the name of the Wolseley Series (London: Kegan Paul, Trench, Trübner & Co.; New York: Charles Scribner's Sons). The first is 'With the Royal Headquarters in 1870-'71,' by Gen. von Verdy du Vernois, then chief of one of the sections of the Prussian General Staff, and since known as War Minister and in other important military positions in Germany. The basis of the book is the current memoranda and correspondence of the author at the time, given without change, in order to reproduce the feelings and judgments of the great Franco-Prussian campaign itself, but with such notes and comments as will enable the reader to make comparison with the later investigations. As a faithful exhibition of the life and work of Moltke's assistants in the field, the book has had a high place in Germany, and its translation will be most welcome to English and American readers.

'Under the Red Crescent' is the title of a very entertaining book narrating the adventures of Dr. Charles S. Ryan, a young Eng-

lish surgeon, with the Turkish army at Plevna and Erzerum in 1877-1878 (Scribners). The author's descriptions of the Turkish army, its officers, organization, and discipline, are valuable, and the pictures of life in the fortresses and camps are well done. The account of hospital work among the wounded at Plevna and in the epidemic typhus at Erzerum is gruesome enough, but it is relieved by amusing scenes and bits of adventure that prevent the general effect from being a depressing one. A broader interest attaches to the author's analysis of the qualities of the Turk as a soldier, seeing him at his best, under the stern rule of Osman Pasha, when his easy good nature and courage had few opportunities to fly off into the fanatical barbarism which is the other side of his nature. Dr. Ryan is an Australian who has been efficiently aided in the literary part of his work by Mr. John Sandes, an Oxford man. It looks almost like a joke of the binder that the ornament on the cover is not the crescent, but the waning moon.

In his 'Bases of Religious Relief' (G. P. Putnam's Sons) Prof. C. M. Tyler takes an abundantly hopeful view of the future of religion. He thinks that "the indications of a concordat between theology and anthropology are cheering," and that "both science and philosophy accept the divine law of development," and supports this position by a rapid survey both of the history of religion and its psychological genesis, and also of the metaphysical, ethical, and æsthetical grounds for religious belief. His treatment is laudably free from technicality, pedantry, and fanaticism, but he tends, perhaps unduly, towards a premature softening down of antitheses, and hardly gives himself space enough to do full justice to his subject. Still, one feels that a faith as confident as his can well afford to be liberal without ceasing to be strenuous, and that if, as we have recently been taught by Prof. James, in some matters "the thought becomes father to the fact, even as the wish is father to the thought," the vigor and buoyancy of Prof. Tyler's little book may well achieve its somewhat unpretentious purpose and promote the cause its author evidently has at heart.

Persons desirous of informing themselves on the Indian question from the standpoint of educated natives well affected to British rule, cannot do better than to purchase Romesh C. Dutt's 'England and India' (London: Chatto & Windus). Mr. Dutt, after twenty-five years of official service and the occupation of a seat in the Bengal Legislative Council, is well qualified to write, and he has done the world a service by the publication of this little book. Eschewing the recital of military operations, he traces the connection between the United Kingdom and India, and sketches the policies of the principal administrators. He points out what he conceives to be the failings and defects from which danger and disunion might arise. These he sums up as unsympathetic treatment; irresponsible government; oppressive taxation, mainly due to mistaken military policy; the drain of home (British) charges; centralization in rural administration; the exclusion, in the face of reiterated promises of impartial treatment, of qualified natives from the higher civil offices. These last he shows to be now held by 1,210 Europeans and 79 Indians. "The time is come when the rulers of India may bestow on the people of India a carefully guarded system of representation and a larger share in civil and military administration."

In accordance with our suggestion of a permanent value for the book-shelf possessed by 'Meyer's Historisch-Geographischer Kalender' for 1898, the New York publishers, Lemcke & Buechner, have transformed the pad into a substantial volume, bound in cloth; and as next year is the fiftieth anniversary of the establishment of the firm of B. Westermann & Co., to which Lemcke & Buechner have succeeded, this fact is stamped upon the covers for a golden jubilee souvenir. This innovation of binding we trust may find favor enough to make it customary, for a portion of the edition at least.

We learn that the *Osprey*, an illustrated monthly magazine of ornithology, hitherto published at Galesburg, Ill., by Walter Adams Johnson, in association with Dr. Elliott Coues, is about to be transferred to this city, where it will be issued in enlarged and otherwise modified form by the Doubleday & McClure Co. The *Osprey* began as an amateur periodical, but outgrew its class with its first volume, and now awaits further development in the larger field it has found. Colored plates will be a feature of the magazine under the new management, and we shall probably soon see whether Mr. Fuertes can paint birds as well as we know he can draw them.

The Nature Study Publishing Company of Chicago issue a monthly periodical called *Birds*, now in its second half-yearly volume, with a circulation, it is said, of some 50,000 copies. We have no reason to question these figures, phenomenal as they are in the literature of ornithology; certainly no periodical, and probably no book, on birds ever before found anything like such favor with the public. This is due to the plates, several of which appear in each number. They are executed by a secret process to which the name of "color photography" is applied, with somewhat startling results. There is room for the widest possible difference of opinion regarding the merits of this performance, but the public verdict is emphatical in its favor. If success be not open to criticism, we have only to say that the result in this case must be reckoned with, and the end is not yet. The accomplishment is all the more remarkable in that the text is anonymous, and no editor or contributor appears to be responsible. We understand that the articles are mostly written by Mr. C. C. Marble. In one series of them, birds are made to speak for themselves, autobiographically, and sign their own names, after the fashion of the now celebrated petition which Senator Hoar presented successfully to the Massachusetts Legislature. There is something very taking about this, especially with our young folks.

The bare announcement is made in *Science* that Prof. Forel, who has held the chair of psychiatry in the University of Zurich, and has been director of the State Asylum for the Insane, has resigned these positions on account of the attacks made upon him by the press for the part he has taken in combating the use of alcohol. It is difficult to understand how such thin-skinnedness can exist in a German professor, and further particulars in regard to this situation will be awaited with interest. It is plainly a blow to the cause of temperance in Europe, for Prof. Forel was the keenest of the half-dozen men who were urging movement in this direction. Meantime he has issued an addendum to his important paper on Consciousness, which was noticed in these columns a year ago.

As the first number on its programme for the current season, the Elizabethan Stage Society of London gave Shakspere's "Tempest" at the Mansion House on November 5 (repeated a few days later at Goldsmiths Hall) in the Elizabethan manner. The members of the society acquitted themselves creditably in their difficult task of presenting a Shaksperian play, partaking of the character of a masque, with severe attention to archæological verisimilitude. The costuming and the music (with the original instruments) were all that could be desired, while the "Egyptian Hall" in the Mansion House, in spite of its modern date, lent itself very readily to the illusion of a Jacobean private performance or masquing-hall. Yet, on the whole, the delivery of Shakspere's lines by amateurs, with or without scenery and modern stage effects, can be made no very distinguished success. Shakspere's plays, above all, and even so highly poetical a piece as the "Tempest," require to be *acted*. The non-Shaksperian drama is the proper field for such work, which, directed to purely archæological and educational aims, as is the work of this society, and as was the case with the revival of the "Epicœne" at Harvard, can be made of great interest and value, and may profitably be attempted by serious-minded amateurs and by the English departments in our universities, while waiting for our endowed theatre with a company of actors competent to revive our literary drama in the form for which it was designed. Later in the season the London society proposes to give the Viola plot from the "Coxcomb" by Beaumont and Fletcher (in the hall of the Inner Temple), Middleton's "Spanish Gypsy," Jonson's "Sad Shepherd," and Ford's "The Broken Heart."

Gustav Fock, Leipzig, and New York (P. O. box 2943), has purchased the scientific library of the late Prof. Victor Meyer of Heidelberg, which he wishes to sell *en bloc*, or less the set of Liebig's *Annalen* (1832-'96), which alone is valued at 1,700 marks. Eight thousand two hundred marks is asked for the library complete.

The movement to secure a part of Elmwood, the birthplace and life-long residence of James Russell Lowell, as a public memorial park, has, it appears, still need of a generous and widespread support. Of the $35,000 wanted, the sum of $19,000 only has been raised—in part provisionally. The house is as yet not purchasable, but in time may be expected to be added to the pine grove and other woodland immediately adjoining it. The amount now sought is what a sculptured monument to our great poet might cost; but the park is the first and fittest monument, and it would be a discredit to the American people to let the project die. Subscriptions may be sent to W. A. Bullard, First National Bank, Cambridge, Mass.

—The fourth volume of the 'Correspondence of Rufus King' (Putnams) brings to an end King's mission in England, and contains fully as much interesting material as the former volumes. On the signing of a convention for determining the vexed question of claims arising under the treaty of 1794, and in view of a growing strain in his re-

lations with the Administration, King sent in his resignation in August, 1802. Of the diplomatic representatives of the United States to European countries after the Revolution no one had so fortunate a service as King. Not only was he successful in winning the respect and confidence of the English Ministry, but his retention in office by Jefferson was a striking proof of his standing at home. It is true Jefferson had a purpose in keeping him at London, for a war with England was not improbable, and, had it become a fact, King as a Federalist would have borne the blame. On leaving his station, King could mention only two questions remaining undetermined between the two countries: impressments and the trade between the United States and the British West Indies, both insoluble at that time. What had been secured and settled by King would make a very long list and one very honorable to himself. He retired at an interesting juncture, for the peace of Amiens was to be broken and England again to make war upon France; and Monroe was in France to negotiate a transfer of Louisiana, for which King and Livingston had prepared the way, and to which the English Ministry were entirely favorable. As King's successor, Monroe had little standing in England, and welcomed the excuse offered by the Spanish negotiation to get out of the country. A sharper contrast can hardly be imagined than that between the diplomatic careers of Rufus King and James Monroe.

—Returning to the United States in 1803, King found his party in a minority and hopelessly divided. The disreputable intrigue to advance Burr, and the proposition to divide the Union, met with no favor with him; his attitude was one of decent reserve, yet of great influence. He took no active part in practical politics, but his character and experience made him a "seer," to be consulted and kept informed by the active workers. The letters to him from Pickering, Gore, and Tracy form the most valuable part of this volume, for they are the unreserved communications of men in the thick of the fight. With Jefferson and his plans King could have little sympathy, though his criticisms are in better taste and judgment than those of other Federalists, who often asserted that Jefferson could appoint only rascals to office, and the greater the rascal the more deserving was he considered as a candidate for trust. The death of Hamilton naturally receives some notice, for King was later held in part responsible for the duel. Writing in 1802, Troup describes Hamilton's law practice: "I have at length succeeded in making him somewhat mercenary. I have known him latterly to dun his clients for money. . . . These indications of regard to property give me hopes that we shall not be obliged to raise a subscription to pay for his funeral expenses." Yet this was exactly what was done, for Hamilton died deeply in debt. The letters abound in personal interest, while presenting a clear, if somewhat partisan, account of the public measures of the time. Franklin, Hamilton, Randolph, Chase, and Jefferson are exhibited as well as Monroe's scheme of colonizing troublesome blacks, the purchase of Louisiana, and Miranda's expedition. We again note some very careless proof-reading. The sentence from Gallatin's letter (at top of page 555) is made meaningless by printing *note* for *risk*, and *present* for *prescribe*. The percentage sign on page 195 is clearly wrong, and the duty on oil is given differently on pages 194 and 201. The Latin on page 319 is as bad as the French on page 556, and among other errors we note *exports* for *reports* (297), *prepaid* for *prepar'd* (452), and *one* for *our* (489).

—Between *foisty* and *Frankish*, Mr. Bradley's new instalment of the Oxford English Dictionary (Henry Frowde) comprises an exceptionally large number of obsolete words, of which one may regret losing *fosterland*, 'adopted country'; and *formity* (whence deformity); together with some notable present Americanisms. Such is the naming a child *for* a person (instead of after), but there is an English quotation of 1800; *forehanded*, but Jeremy Taylor used it; *forever* (the adverb written without a hyphen), but this goes back in England to 1678; *forward of; for rent*, 'to let'; *fork* (of a river); *forthputting*. Mr. Lowell is cited for this last convenient locution, and he made a literary use of *forthright*, which is a living word in England, but not in this country. The same may be said of *forwards* for *forward*, the English distinction being that *forwards* "expresses a definite direction viewed in contrast with other directions." The word *forth* has shed many of its uses, and Grey censured the word as obsolete in 1771. "Back and forth" has now taken refuge on this side of the Atlantic. "Like forty" is only our national application of a use of *forty* from Shakspere down to express indefinitely a large number. In pronunciation we Americans have completely anglicized the word *fracas* by sounding the *s*. With equal courage we have popularized Scriptural metaphor in making "the *footstool*" stand for the earth. In Mr. Lowell's "civlyzation doos git *forrid*" (rhyming with horrid), the Scotch *forrit* for *forward* is approached, by a nautical avenue, as we surmise; but skipper English could hardly be taken cognizance of in this Dictionary. We should have liked to meet with Emerson's "In an age of fops and toys" under *fop*, as we do with Longfellow's "*footprints* on the sands of time" in its proper place, whereas Shakspere's "Dance on the sands, and yet no *footing* seen" fails to be adduced in the sense of 'footprint.' And under *forgiveness* we miss FitzGerald's "Man's forgiveness give—and take."

—In word-formation there is observable a curious endeavor, which apparently broke out in the fifties, to frame a verb for *formula*. Westcott used *formulize* in 1851; R. Knox *formule* in 1852; *Frazer's Magazine* (in the same year) *formularize;* and Earl Carnarvon *formulate* in 1860. All but *formule* are flourishing, and give a redundant but not valueless synonymy. The old words for galley-slave, *forsado, forsar* (*forsary*), have quite gone out—as has in French *forsaire* (*forçaire*), being superseded by *forçat*. The Italian *forte-piano* we have changed about, preparatory to shortening the number of syllables in pianofort(e), and finally dropping the *forte* altogether. Of *forte* (point of excellence) Mr. Bradley remarks: "As in many other adoptions of French adjectives used as substantives, the feminine form has been ignorantly substituted for the masculine; compare *locale, morale* (of an army), etc." This is, perhaps, too severe, for the mute *e* serves, at least (albeit to the displeasure of our phonetic reformers) to distinguish the new word to the eye from corresponding forms already found in English, and (in the case of the dissyllables) to fix the stress and pronunciation in harmony with the French. Euphony, too, certainly plays a part in our preference for the feminine form; *naïve*, or we mistake, has with us the upper hand of *naïf*, and is supported by *naïvely* and *naïveté*. *Foreword*, which has still but an archaic and affected sound, we owe to Sir G. W. Dasent, in 1842; in 1846 W. J. Thoms struck out *folk-lore*, which has come to stay. *Footlights* emerges first in Dickens, 1836-9, following upon the extensive use of gas; one may see these lights already depicted in Cruikshank's 'Sketch Book' (1834). In 1812, or the date of the 'Rejected Addresses,' they were "our long wax candles, with short cotton wicks." We have heretofore suggested that Erasmus gave currency to the word *anarchy*. It was in translating this scholar's 'Praise of Folly' that Chaloner, in 1549, happily fashioned *foolosopher* (μωρόσοφος). Mr. Bradley forbears to mark it obsolete, though he cites no occurrence of it this side of 1694.

—The widespread interest in Tennyson's biography has drawn attention to the coincidence which made 1809 the birth-year of many eminent men. A still more remarkable coincidence has not been referred to—so far as we are aware—and that is that for a century the years ending in 9 were most productive of celebrities. Thus, Samuel Johnson, the dictator in English literature during the eighteenth century, was born in 1709; 1719 had no great sons, but 1729 produced Edmund Burke, Lessing, Empress Catherine II., and Suvaroff, the most celebrated of Russian generals. In 1739 was born Laharpe, now merely a name, but for two generations at least an authority in French criticism and literature. 1749 saw the birth of Goethe, Mirabeau, Laplace, Charles James Fox, and Jenner, and 1759 gave light to Burns, Schiller, William Pitt, Danton, and William Wilberforce. 1769 deserves still more emphatically the title of *annus mirabilis*, since in it were born Napoleon and three of his most famous marshals, Ney, Lannes, and Soult; Wellington, Alexander von Humboldt and Cuvier, Castlereagh, and Sir Thomas Lawrence, the painter. 1779 can boast of men of the second class only, yet they are still men of distinction—Washington Allston, Francis Scott Key, the author of "The Star-Spangled Banner"; Joseph Story, Jomini, Lord Melbourne, the Queen's first prime minister; and Lord Campbell. 1789 seems to be sufficiently conspicuous as the initiator of the French Revolution, yet it produced Daguerre. 1799, more prolific, ushered in several men whose works have helped to give our own century renown—Balzac and Heine, Delacroix, Pushkin, the first of Russian poets; Thomas Hood, and Lord Derby. But 1809 outshines it, producing, among statesmen, Abraham Lincoln and Gladstone, Beust and Ricasoli and Robert C. Winthrop; among poets, Tennyson, Edward FitzGerald, Oliver Wendell Holmes, and Giuseppe Giusti; among musicians, Chopin and Mendelssohn, and, in solitary preëminence, Charles Darwin, whose name beyond all others gives our age its name. February 12, the day on which Lincoln and Darwin were born, might well be made an international holiday for all English-speaking peoples; history does not record another instance in which two such epoch-making men had the same birthday. 1819 also contributes a noteworthy group—

Queen Victoria, Prince Albert, George Eliot, John Ruskin, Lowell, Charles Kingsley, A. H. Clough; W. W. Story, the poet-sculptor; Struve, the Russian astronomer; Courbet, the French painter; Duke de Gramont, whose overweening Jingoism precipitated the Franco-Prussian war; Elias Howe, the perfecter of the sewing-machine, which has revolutionized the labor of millions of women; and W. T. G. Morton, who first publicly demonstrated the virtue of ether as an anæsthetic. Here is, indeed, a memorable list. It is not too much to say that the eight years 1709, 1729, 1749, 1759, 1769, 1799, 1809, and 1819, produced more celebrities of the first rank than were born in all the other 103 years of the eleven decades between 1709 and 1819. In old days, when the superstitious attributed a mystic significance to the number 9, some cabalist might have tried to explain this list by an appeal to the hidden principles of his lore. We see, of course, only coincidences, but coincidences sufficiently striking to deserve notice.

—"Mr. Justin Winsor," writes a correspondent in England, "was much esteemed in the Old Home. An American, first of all, he was one of those genuine Americans who recognize that, after all, Britain was the land of their forefathers. Mr. Winsor's solid knowledge of those branches of learning of which he was a student, caused him to be looked up to as an authority. On reading the admirable notice of him that appeared in the *Nation*, I have been surprised to find no mention of his preëminence in cartography. I have heard Mr. Coote of the British Museum, himself a front-rank expert, speak in the highest terms of Mr. Winsor's attainments in that branch of learning, when he unreservedly described the late Librarian of Harvard as 'the first cartographer in the New World.' They had never met, but knew one of the other by their work, and they had crossed swords in the press upon questions of cartography. Moreover, was not Mr. Winsor called in as an expert in cartography to advise the Cleveland Commissioners for defining 'the true divisional line' between Venezuela and British Guiana? With respect to that service, and the information thereby gained by him of the merits of the question, the following statement may give food for reflection to those insufficiently informed persons who vehemently denounced Great Britain as grabbing the territory of a weak South American Republic. When Mr. Winsor was over here in the summer, attending the International Conference of Librarians, after we had talked for some time of historical matters connected with the Venezuelan boundary question, he said, in substance, and in words like the following: 'Now that the matter has been handed over to a Court of Arbitration, I think I may say that in my opinion Great Britain has the stronger case up to the Schomburgk Line. Beyond the Schomburgk Line'—here he paused—'well, I think Venezuela has more to say.' "

RECENT BOOKS ON LITERARY STUDY AND THEORY.

Talks on the Study of Literature. By Arlo Bates. Boston: Houghton, Mifflin & Co.

Literary Art: A Handbook for its Study. By Harriet Noble. Terre Haute, Ind.: The Inland Publishing Co.

Style. By Walter Raleigh. Edward Arnold.

The Principles of Criticism: An Introduction to the Study of Literature. By W. Basil Worsfold. London: George Allen.

New Essays towards a Critical Method. By John Mackinnon Robertson. John Lane.

Whether or not it be true that we are falling into a stage of Neo-Alexandrianism in literary study as in literary production, it cannot be denied that the recently multiplying books on poetics and rhetoric bulk larger than ever before, in the comparative rarity of new and conspicuous masterpieces of a creative sort. A desperate effort is being made in many quarters to supply the loudly proclaimed want of a complete and methodic art and science of literary study and teaching—not as yet, it must be pronounced, with any very notable success. There are, of course, conservatives and sceptics who maintain that the thing is impossible; that there is no "science" of criticism at best, and that the art of teaching rests in the teacher, an incommunicable gift; or even that literature is not to be taught, being the breath and finer spirit of a knowledge caught up by each soul in the privacy and sanctity of the inner life, and not open to the contamination of the school-room and the publicity of examinations. And then there are two schools even among critics and expounders of literature: there are those who insist on form (whence the theory and æsthetics of literature in all their divergences) and those who insist on subject-matter and spirit (and, as literature concerns itself with the whole range of ideation, their discordancy, too, is endless). The rarity of the noteworthy successes in this field of study, as, say, in the 'Poetics' of Aristotle and the essay on Style of Herbert Spencer, while certainly marking out the innumerable failures more indubitably as failures, according to the view you take of the whole matter, may be said on the one hand to prove the practical impossibility of working the subject out, or on the other hand simply to make plain the necessity of calling the best wits to its solution. As it is, the question certainly drags, and, in spite of the multitude of counsellors, there is little progress.

As a slight contribution to the discussion, Prof. Arlo Bates has gathered up and put into print his lectures on the study of literature, delivered at the Lowell Institute in 1895. The book is in the essay style, written from the latitude of Boston, full of well-sorted talk, criticism, anecdotes, and advice for readers—most of it generally sound, but too often indefinite and inconclusive, after the convention of the essay style, and most of it, moreover, tolerably obvious. There is really no new point of view or new proposition in the entire volume. The humdrum patter about art is sufficiently recurrent, but when the author gets on the track of what promises to be an interesting idea, he has a distressing habit of giving up the chase before he has bagged his game. The discussion of the Sunday newspaper and the magazine habits, and of modern literature for children (pp. 163-5, 193-8), inculcates salutary doctrine. The book is enlivened with occasional critical *obiter dicta* on current literature, and we are made acquainted with Prof. Bates's personal bias of judgment, condemnatory of "In Memoriam" (as art), Ibsen, Zola, Tolstoi, and Maeterlinck, and with a tempered admiration for Dumas, Turgeneff, Sienkiewicz, Meredith, Hardy, Stevenson, and Kipling. The book follows the fashion of the day in depreciating (quite unduly) the historical study of literature. Several of the chapters are singularly empty of matter, and although in their original form of "talks" the contents of these lectures were doubtless useful and agreeable, we doubt if they are important enough for preservation in print.

Miss Noble's 'Handbook of Literary Art' is a well-meant attempt to digest and codify for the use of schools and of readers in general the matter bearing more strictly on literary study and theory contained in such authors as Genung, Gummere, Moulton, and others. Its scope is not unlike that of the recent volume by Crawshaw. We cannot deem either the plan or its execution commendable. If the study of literature in the schools is to bring young students but to this, there can be little profit in it. The rage of our day, it is true, is for abstractions about literature; but one may doubt whether it connotes a deeper feeling for the subject than that of the readers of past generations who browsed unguided in whole libraries. At any rate, literary theory should follow, not precede, the reading of masterpieces, although it may be fairly urged (as with the study of language) that a certain amount of the grammar must precede the reading of texts. If the emphasis of class-room study, especially in pre-collegiate grades, is to be laid upon skeletons and analyses and classifications aiming chiefly "to unravel the conscious mental performance of the artist" (p. 28), there is grave cause for fearing lest the formative and spiritual effects which have been promised from this study will be subordinated to methodology, which more appropriately may be acquired through other studies. The plan is well enough for students of a certain grade, although there would always be danger lest those subjected to it should come to imagine that, by virtue of the process, they must necessarily get at the heart of the matter. In spite of the pressure of the class-room in such a direction, it is necessary to plead against too much method and process in the reading of literature in the schools. The book in hand is marred by too much vague platitude about art (consisting mostly of weak dilutions from its sources), and by an amateurish and faulty style which cries aloud for the pencil of the theme-revisor. It is full of echoes of "the study-class" and the village-rhapsodist.

The little book on 'Style,' by an English professor, while chiefly an essay in phrase-making, and just a bit forced, is in cheering contrast to the heavy *morgue* of the volumes just described. It is significant among books on literary theory as an attempt at such fresh and creative work as we are accustomed to expect from French criticism alone. Although the mechanics of composition can, "style cannot be taught," says Prof. Raleigh. . . . "Divination is the only means of access to these mysteries." . . . "Criticism has been popularly opposed to creation, perhaps because the kind of creation that it attempts is rarely achieved, and so the world forgets that the main business of criticism, after all, is not to legislate, nor to classify, but to raise the dead." The essay as a whole is perhaps a sequence of topics and of paragraphs—mostly variations and improvisations on standard thematics, but fluent and sparkling

with suggestion—rather than anything definitely articulated. For this reason, it will hardly serve as an object-lesson in its kind, but it is none the less readable. As style in itself, it is somewhat too ejaculatory, too pertinaciously clever, and too sturdy in the pursuit of epigram—a touch-and-go style, apt and delicate in citation and illustration, eager for innuendo and implication, free and frolic in spirit, but, after all, self-conscious. Prof. Raleigh's master is Stevenson—the Stevenson of 'Virginibus Puerisque' and of 'Memories and Portraits'—and there are hints of Pater and Meredith. Good things in the book are numerous, as the pages on slang (pp. 27-32), on modern melodramaticism (pp. 81 ff.), and in the frequent epigrams. Still, as a composition, the essay lacks ganglion, centre, purpose, destination, and is a good deal in the air.

A more serious attempt at the philosophy of literature than any of the preceding is Mr. Worsfold's treatise on 'The Principles of Criticism.' The sub-title may be found a little misleading, for the book is too formal, too abstruse, and too argumentative to serve as an "Introduction to the Study of Literature" in any properly regulated plan of education. It resembles Miss Noble's 'Handbook' in presenting a digest of the substance of various authorities in critical theory, choosing, however, for this purpose first-hand rather than second-hand text-book authors. It is written, too, by a scholar and a thinker, although by one thoroughly an Englishman in his limitations, in spite of the appeal to Lessing and Cousin which is part of the author's plan. Its matter is not thoroughly digested, but produces (much of it) the effect of being thrown together. The book presents a combination of an analysis of the leading ideas in literary æsthetics of Aristotle (superfluous in view of the recent work of Mr. Butcher), Plato, Addison, Lessing, Cousin, Matthew Arnold, and others, together with a discursive discussion of current topics of related interest in the review style. The original "principles of criticism," which are the outcome of the last four chapters, are somewhat obscure and indecisive.

Mr. Worsfold waives the attempt of German metaphysics at a "transcendental" æsthetics, and defends "psychological" æsthetics as agreeing both with Greek experience and with sound philosophy. The truth of art and the truth of logic and nature are not the same. Art, as Bacon maintained, idealizes and submits the shows of things to the desires of the mind, while its peculiar faculty is the imagination, as Addison first demonstrated. Plato is nearer modern ideas than Aristotle, in that he emphasizes the test of truth rather than the test of form in art. Lessing is Aristotelian in concerning himself chiefly with form and with limitations of the arts. Cousin returns to the idealist or Platonic æsthetics; while Matthew Arnold has been most conspicuous among recent critics in subjecting poetry to the tests of imagination and of truth, or, in other words, of the application of moral ideas to the criticism of life. Further than this there are chapters devoted to the topics of Poetic Justice, of The Drama as a Composite Art, of The Novel as a Form of Literature, and of Authority in Literature and Art. The later chapters are full of a clever young man's confident modernity of view, while the preceding chapters are soundly historical in method. The most striking differentiæ of the plan of the book as a whole are the historical importance assigned to Addison and to Cousin, and the gaps resulting from neglecting the contributions of other modern writers who are quite as important. Addison is important in the history of applied criticism in England, but in æsthetic theory Mr. Worsfold hardly vindicates the large claims he makes for him. Although the term imagination is little used in critical discussion before his day, the essential idea of the faculty, under the terms "fancy" (phantasy) or "wit," is common enough with the Elizabethan writers, and is regarded by more than one of them as the ground-idea of the poetic faculty and function.

A critic of quite other views of the purpose of art than Mr. Worsfold, with his adherence to the Platonic doctrine of the importance of the ethical and the true in poetry, is the author of the 'New Essays towards a Critical Method,' who (theoretically) admits of no test in art but that of "workmanship." Mr. Robertson's earnestness, honesty, knowledge of his subject, and purely intellectual acuteness are as unmistakable as the general wrongness and perverse infelicity of his literary judgments. In these 'New Essays' he returns to the main subject of the 'Old' in a short introductory essay on the theory of criticism; the rest of the volume consists of an uncompromising and polemical vindication of Poe as man, as poet, as "fictionist," and generally as "reasoning power"; a harsh and hostile psychological analysis of Coleridge's character and performance; a completely censorious and misapprehensive rule-of-thumb critique on the poetry of Shelley; a study of Keats marked by extraordinary aberrations of judgment in detail; a couple of local (and temporal) papers on Burns, presenting matter perhaps salutary for Scotchmen when coming from a Scotch pen, but negligible for others; then, by way of surprise, an essay of headlong and disproportionate appreciation of Clough—as a novelist! and finally, in an appendix, the essay of most serious worth of all, being a study of the phenomena of accent, quantity, and feet in modern and (to some extent and historically) in ancient versification. All this may or may not constitute contributions "towards a critical method"; the residuum of feeling with most readers who close the book will be one of puzzlement at the visible vagaries in "method" which lead to the exaltation of Poe and Clough in the same breath with a laboriously reasoned denigration of the greater part of the work of Shelley and Coleridge, and much of the best of the work of Keats!

In critical theory Mr. Robertson believes, as Mr. Moulton believes, that criticism (practical criticism, not merely literary æsthetics) is or may be made a "science." Only that he wears his rue with a difference. Pure intellect and logic, not sensibility and appreciation, are to be the bulwarks of the new "systematic" criticism. The greater part of the author's introductory essay is taken up with an exposition of the views of the brilliant young French essayist, the lamented Hennequin; with these he finds himself in entire sympathy. The volume as a whole, indeed, may be described as an attempt to introduce into English practice something of the methods and spirit of one of the latest schools of French criticism. The attempt fails precisely because the author is altogether lacking in the fine French instinct in things literary, while he has sacrificed, or has never fairly possessed, the native English feeling for what is right and high in poetry. The critical ineptitudes which this volume affords make a melancholy list. The explanation of Poe's "Ulalume" (p. 89) is ingenuity at its last gasp; the comparison of Coleridge, Dryden, and Burke (p. 162) is quite impossible; the ineptitudes of the essay on Shelley we leave to the true Shelley worshippers to refute; some of the generalized comments on Keats are just, but the detailed judgments are often worthy of Prof. Wilkinson. Decidedly as yet the new method is giving a bad account of itself.

SLOANE'S NAPOLEON.

Life of Napoleon Bonaparte. By William Milligan Sloane, Ph.D., L.H.D., Professor of History in Princeton University. In four volumes. Illustrated. The Century Company. 1896-97.

There has seldom, if ever, been issued from any American publishing-house a more sumptuous work than Prof. Sloane's monumental history of Napoleon. No expense has been spared to produce four volumes more splendid in appearance than any ever before sent forth by the Century Company. All that the improved methods of reproduction can do has been done, and it may be said at once that any one desiring to make a gift, as a wedding or a birthday present, of a picture-book would find Prof. Sloane's volumes heartily appreciated, for they are fitted to adorn the drawing-room table, and the numerous illustrations will serve to while away many a tedious hour. There can be no doubt that this will be the principal use to which these volumes will be put, for they are too heavy to handle, and therefore too difficult to read, unless propped up on a special desk or managed with special appliances after the fashion of an ancient folio. Their price puts them out of the reach of the ordinary, every-day reader, as their cumbrousness makes them awkward for the scholar to manipulate.

When the first volume was published, a few remarks were made in these columns upon the character of the illustrations which form so conspicuous a part of this Life of Napoleon; but, now that the work is actually completed, it is perhaps as well to emphasize once more the point then made. Prof. Sloane, indeed, ought not to be held responsible for these illustrations, but the attention of the public ought to be clearly drawn to the fact that a large proportion of them, however admirable in themselves, are entirely without historic value. In the case of a confessed picture-book, the critic has to deal only with the pictures themselves and with the excellence or want of excellence of the reproductions. But this Life of Napoleon does not profess to be a mere picture-book; it professes to be a history. Prof. Sloane has spent much time and great labor upon it, and it is unfortunate for his reputation that the accompanying illustrations should detract from, instead of increasing, the serious attention one would naturally bestow upon it. Prof. Sloane must know, as well as any other historical scholar, that illustrations to an historical work are valuable only when re-

productions of contemporary pictures, or actual views of places described, or authentic portraits of men and women. Had he had his way, no doubt, his history of Napoleon would not have been disfigured from this point of view, or embellished from the publishers' point of view, with the numerous fanciful studies of Napoleon himself in situations of supposed interest, or with the imaginative battle-scenes of modern battle-painters. There is no particular fault to be found with the pictures themselves; many, indeed, have great artistic merit, and some, like Meissonier's "1814," may claim rank with the world's great pictures; but they have no place in a professed history written from original sources. The colored illustrations, which form the glory of the book, nearly all belong to the class of fancy pictures.

As regards the text, a difficulty meets the critic at once. It is not just to treat a scholar of Prof. Sloane's reputation as the compiler of another popular Life of Napoleon, and yet he gives no opportunity for judging the thoroughness of his work. He says: "It will be understood that the absence of references, notes, and discussions throughout the preceding pages is due to the publishers' plan, which, in deference to what seems to be the present taste of the reading public, excluded them as interfering with the course of the narrative" (vol. iv., p. 251). The publishers perhaps gauge correctly the taste of the picture-book-buying public, but Prof. Sloane must know that his work cannot be seriously considered as a contribution to history without these very "references, notes, and discussions" to which such slighting allusion is made. The list of historical sources which he appends is of trifling value when no information is given as to how those sources have been used. A mere collection of titles of good, bad, and indifferent books, of primary and secondary authorities, jumbled together without any attempt to classify or criticise them, is a poor guide to the reader who desires to find whence Prof. Sloane obtained his information, or desires to know whither he may go for further knowledge on any particular topic. The essential characteristic of modern historical work which expects to be taken seriously is the frequent citation and comparison of authorities in order that the reader may not have to depend upon the *ipse dixit* of the secondary writer, and may know how to test and estimate his diligence and his judgment. It is only the Abbotts and the Headleys who, in professedly popular books, can afford to omit all direct references to their sources. It is a known fact that Prof. Sloane has done much industrious work among primary authorities, and it is therefore the more aggravating that his present readers cannot specifically discover what new things he has found or what old mistakes he has corrected.

We shall venture on a few examples. The first passage to which a student of Napoleon's early career turns in a new life of him is to see how his début at the siege of Toulon in 1793 is treated. Few points in the military history of the Revolution have been more bitterly debated than the question of the amount of credit due to the young Bonaparte for the successful military operations which led to the recapture of the great French naval port on the Mediterranean. A single paragraph deals with this point. The credit of the measures leading to success is given by Prof. Sloane to Napoleon, and then, on page 137 of the first volume, it is remarked that "there was either jealousy of his merits, which are declared by his enemies to have been unduly vaunted, or else his share had been more insignificant than is generally supposed." This entirely disregards the strongly supported assertions which have been made, for instance, in the carefully composed work by MM. L. Krebs and H. Moris, 'Les Campagnes dans les Alpes pendant la Révolution,' published in 1891, that the plan for the taking of Toulon was General Dugommier's, and that the credit belongs to him. Prof. Sloane does not mention this important book in his list of historical sources in the fourth volume, though it is almost entirely compiled from original and most valuable material.

Turning to the second volume, it is astonishing to find that Prof. Sloane considers the *coup d'état* of 18 Fructidor, 1797, as mainly the work of Napoleon, who was at that time commanding in Italy. It would take too long to discuss this view, which is contained in a passage in volume ii., page 15.

"It is now generally said," writes Prof. Sloane, "that Fructidor was exclusively the work of Bonaparte; or, rather, that the thirteenth of Vendémiaire was the work of Barras, assisted by Bonaparte—that the eighteenth of Fructidor was the work of Bonaparte assisted by Barras. This is only a half-truth based on an exaggerated estimate of the facts. While, on the whole, Bonaparte was at the moment pleased with the results of this second political stroke, there was much connected with it utterly repugnant to his wishes."

This is eminently a case in which it would be interesting to know upon what authorities Prof. Sloane relies. Certainly M. Victor Pierre, the most recent and most thorough student of the events of Fructidor, has written nothing to justify it. The general who carried out the military part of the *coup d'état* was indeed Augereau, who had been sent from Italy to the aid of the Directors in Paris, but it would be too much, on this account, to attribute the conception and the issue of the "day" to General Bonaparte.

As a random instance of the trying absence of cited authorities in volume iii., reference may be made to Prof. Sloane's allusion to (it cannot be called an account of) Sir Arthur Wellesley's first campaign in Portugal. Two or three sentences only upon page 123 are given to this campaign, and they contain one remarkable error of omission. It is stated correctly enough that, just as the battle of Vimeiro had been won by Wellesley, he was superseded by Burrard. But no mention is made of the further supersession of Burrard by Dalrymple; and the impression is left that it was Burrard who negotiated the Convention of Cintra. Prof. Sloane, of course, knows better than this, but the omission is, to say the least of it, enough to suggest that he has not read Sir Hew Dalrymple's defence of his proceedings in Spain, which, further, is not cited in his list of historical sources any more than the works of M. Pierre or MM. Krebs and Moris.

In volume iv., which deals with the overthrow and latter days of Napoleon, it is natural that the reader should at once turn to the story of the Hundred Days. M. Henry Houssaye, in his masterly book entitled '1815,' has disproved the oft-told tale that the return of Napoleon from Elba was welcomed with enthusiasm by the people of France. Prof. Sloane does mention M. Houssaye's volume in his list of historical sources, but he does not seem to have grasped its meaning. He admits, indeed, that the small number of votes cast for the Additional Act shows what he calls "a curious apathy," but he goes on to say later (p. 168), with inappropriate eloquence, that in the following April "every man with any means saw himself beggared, and every mother felt her son slipping from her arms to swim once more that sea of blood in which for a generation the hope of the nation had been submerged." All readers of M. Houssaye's volume will pronounce this statement to be absurdly exaggerated. Yet the critic is loath to condemn Prof. Sloane, for it may be that in the French archives he has found information that tells against the conclusions of the chief French authority on the subject. And here we end by expressing the hope that Prof. Sloane may bring out a new edition of the Life without fancy pictures, and with a scholarly exhibition of authorities on disputed points, worthy of his reputation.

Shakespeare, Bacon, Jonson, and Greene: A Study. By Edward James Castle. London: Sampson Low.

The Baconian "theory" is the mother of inventions. Most of her progeny are so monstrous as to excite pity or abhorrence rather than amusement, but here at last is a bantling at which one can laugh without disgust, and the *accoucheur* is "one of Her Majesty's Counsel." Before he took to the law, Mr. Castle was a lieutenant in the Royal Engineers. Since he became a Q.C., he has apparently had an abundance of (more or less learned) leisure, and has fallen to reading Shakspere. Where he learned to reason and to handle evidence we are not informed. Perhaps it was in the army, while he was superintending the big ditch on the Island of Portland (for particulars see p. 125 of his ingenious "study"). His naïveté he has doubtless acquired in the practice of his second profession.

Mr. Castle's view may be summed up as follows: Shakspere's dramas are divisible into two groups, the "legal" and the "non-legal" plays. In the former he evinces such a knowledge of technicalities and so fine a comprehension of a lawyer's feelings and habits of thought as no layman can have possessed. The latter betray ignorance of which no lawyer would have been guilty. The extreme Baconian hypothesis has not a leg to stand on; there is no reason to suppose that Shakspere did not write his own works. But an author who blunders so sadly in the "non-legal" plays cannot have written the "legal" plays unaided. We must infer, then, that, in the composition of some of his dramas, Shakspere received the assistance of a lawyer. So far it does not appear that this friendly coadjutor was Bacon. Indeed, says Mr. Castle, one might rather think of Coke. But, if a probability can be made out that Bacon and Shakspere were acquaintances, and if, further, points of connection between the works of the two can be shown, we may reasonably conclude that Bacon was the contributor. Now Mr. Ignatius Donnelly, though his cryptogram does not strike the legal mind favorably, has nevertheless collected many "parallel passages," which "do

go a great way to establish that Bacon had some part in Shakspere's works." Again, Bacon's commonplace-book, the famous 'Promus of Formularies and Elegancies,' edited by the immortal Mrs. Pott, is such a collection "as Bacon might have been expected to make if he were preparing to write or assist others in writing works like those we know as Shakspere's."

These are preliminaries, doubtless, and prove nothing; but there is more to come. "The Comedy of Errors" is one of the "legal" plays. It was produced at Gray's Inn, in the course of the celebrated revels described in the 'Gesta Grayorum.' A part of these revels was the mock trial of a certain "sorcerer or conjurer," charged, among other things, with having "foisted a company of base and common fellows to make up our disorders with a play of Errors and Confusions." This conjurer must have been Bacon. At all events Bacon was, in Mr. Spedding's opinion, the author of the speeches of the Six Councillors which formed a part of the entertainment with which the revels were continued. If, then, Shakspere had a helper learned in the law, we may safely conclude that this helper was Bacon.

The whole argument is clinched by a strong probability that Bacon had much to do with the publication of the first folio of Shakspere's plays—a probability that rests mainly on a new theory of the authorship of "Henry VIII." In this drama, if we follow Mr. Castle, Shakspere had no hand. In its first form—"All is True," the play which caused the accidental burning of the Globe Theatre—it was a "merry and licentious" affair. In its present shape it is mainly the work of Ben Jonson, who wrote (or rewrote) it at Bacon's request and with Bacon's assistance. It is full of legal lore, and, in particular, of details about the lord-chancellorship. What is more likely than that Bacon, deprived of his offices and at the end of his political career, should have returned to the flowery walks of dramatic literature in this period of his enforced leisure? But we have what is almost direct evidence! Bacon pretended that he was writing a History of Henry VIII., and under that pretext got access to the public records. Yet he wrote no such history; he had barely begun it at the time of his death. The inference is inevitable: he wished to consult documents in collecting materials for the *play* of "Henry VIII.," which Ben Jonson was writing for him. All this being true, the insertion of "Henry VIII." in the First Folio becomes a fact of the highest significance. If—but our readers may find it diverting to trace the argument backward for themselves.

It will be seen that Mr. Castle is a very moderate Baconian indeed. For some opponent is reserved the task of showing that Shakspere prophesied his existence and his work when he spoke of "my old lad of the castle," and when he made *Hamlet* declare that

> "'Tis the sport to have the *Enginer*
> Hoist with his own petard."

Richard Wagner. By Houston Stewart Chamberlain. Translated by G. A. Hight. Lippincott. Pp. 402.

Among the men who have in Germany labored for the Wagner cause, there are some, like Wolzogen, Porges, and Glasenapp, to whom their hero is as infallible as ever pope seemed to a devout Catholic. Mr. Chamberlain not only belongs to this class, but is what may be called a Cosima-Wagnerite, a partisan to whom the widow is as infallible as the master. Since it is well known that the widow thinks herself wiser than the master, and often does things contrary to his wishes and directions, it may seem difficult to combine the rôles of Richard-Wagnerite and Cosima-Wagnerite; but inasmuch as Mr. Chamberlain appears in the latter rôle only in his newspaper articles, and not in his present book, this difficulty need not detain us here. His sumptuous volume is not so much a biography as a collection of essays. It is true that his first chapter is given up to a biographic sketch, but it occupies only 78 pages out of 402, while, to make no account of a lengthy and wordy introduction, the remaining chapters are entitled "Wagner's Writings and Teachings," "Wagner's Art-Works," and "Bayreuth." Even in the biographic chapter there is more comment than narrative, Mr. Chamberlain having apparently acquired the German metaphysician's contempt for mere facts and the love of moralizing and "building from within." To put it tersely, there is too much of what a Chinaman would call "talkee, talkee." For instance, when we expect a few touching incidents relating to Wagner's death and burial, we find the matter disposed of in one line, while the page that ought to have been given up to details is filled with quotations from Voltaire and Frederick the Great and a dissertation about pity and philosophy.

Apart from this garrulous propensity and the disposition to treat Wagner as a philosopher with the same veneration that is bestowed on him as poet and musician, little fault is to be found with Mr. Chamberlain's book, which may be commended to all lovers of Wagner, although those who are familiar with the literature of the subject will find little that is actually new. Even these, however, will prize the numerous portraits and other illustrations which it contains. The list of portraits includes nearly all the men and women who were for a long or a short time among the dramatis personæ in the tragedy of Wagner's life. Many of them are full-page and reproduced in the highest style of art. There are also autographs and other facsimiles, play-bills, etc. Indeed, in the matter of illustration, this book is even superior to Jullien's; but it contains no caricatures.

While Mr. Chamberlain's spirit of veneration forbade the introduction of pictorial caricatures, it did not prevent him from citing a number of the grotesque professional criticisms on Wagner; also some amusing ones on Mozart, who is so often opposed to Wagner as a peaceful musician. He makes the interesting assertion, based on a letter, that Mozart, goaded by unjust censures, intended to write a book on musical criticism with the object of castigating his enemies. "It will always be a matter for regret that his intention was not carried out, for we know from his letters that he possessed an unusual amount of critical acumen; heedless of all consequences, his pen, with its caustic wit, chastised many things generally praised in his day and even now regarded as commendable. Besides, such a book would have dissipated the ridiculous fiction of the mindless genius singing like a bird on the tree." Chamberlain dwells on the fact that none of Wagner's immediate kinsfolk ever showed any true appreciation of his genius, and that the opposition to him came mainly from professional musicians, making true of him what he himself wrote of his idol: "The non-musician alone has prepared the way for the understanding of Beethoven's works."

Mr. Chamberlain thinks Wagner was "a born wielder of languages," and he adds: "Whoever has had the opportunity of examining that most eloquent testimony to the universality of Wagner's mind, the library at Wahnfried, will have remarked that the science of language was his favorite study until his death. I commend this fact especially to the attention of those who imagine, often in consequence of their own imperfect literary knowledge, that they can speak of the language of Wagner's poems with a certain tone of disparagement." Toward the renegade Nietzsche our author shows a forgiving disposition; his 'Richard Wagner in Bayreuth' is still, he declares, of all works, "the most beautiful which we possess about Wagner; it was written shortly before the first signs appeared of the fearful malady which shattered this splendid intellect and made him the court-fool of a frivolous, scandal-loving *fin-de-siècle*." These quotations are taken from footnotes, Mr. Chamberlain having, among other German traits, adopted that of putting his best and most important things below the text.

Natural History. By R. Lydekker and Others. D. Appleton & Co. 1897. 8vo, pp. xvi, 771, more than 500 cuts.

This "authorized edition" of a recent English work forms one of the volumes of "Appletons' Concise Knowledge Library," aiming to be a popular natural history, at once accurate in statement, handy in form, and ready of reference; the several departments of zoölogy being treated by specialists distinguished as authoritative original investigators, etc.—to cite the publishers' preface.

The attempt to cover the animal kingdom in a single volume has been repeatedly made, but never satisfactorily accomplished. The thing is probably impossible, now that the details of zoölogical science have multiplied so enormously. The time has passed for a Cuvier's 'Règne Animal,' full of technicalities for the few, or for a Goldsmith's 'Animated Nature,' or a Goodrich's 'Natural History,' full of absurdities for the many. The apparent impossibility of a one-man book has led to the coöperative system, but with little better result, probably even more unsatisfactory to the authors themselves than to the average critic. What is gained by the work of eminent specialists is lost by lack of homogeneity in the whole; and every such writer is visibly cramped for room in which to do himself or his subject justice. The upshot is generally a makeshift, as in the present case; for if the writer wishes to be technical, he has no space left in which to make himself popular; and if he tries to be popular, his character of scientific expert is reduced to the vanishing-point. The promise of every such single-volume work ends in a compromise.

Not the least notable feature of the long series of "Animal Kingdom" books we could instance is the steadiness with which they hold to a certain ratio of fulness of treatment of the several main branches of zoology. From the time of Cuvier, who wound

up his work by sweeping a vast assemblage of low organisms, having little in common but their lowliness, into what Huxley called the "radiate mob," to the date of appearance of the present book, animals have been thrown entirely out of their biological perspective by enlarging upon those which have the most "human" interest, to the sacrifice of all the rest. This is perhaps necessary, even commendable, in works which the general public are invited to buy and read; but it is not that scientific treatment to be reasonably expected when eminent specialists collaborate. To illustrate this point in the present instance: Two-thirds of the book is devoted to vertebrates, mainly by Dr. Lydekker; mammals are treated in 214 pages, Dr. Sharpe's birds in 143 pages, reptiles in 72, fishes in 98. This ratio of the vertebrate classes themselves is not much out of proportion, but what shall we say next of 74 pages for all arthropods (crustaceans, arachnidans, insects, etc.), when the class of *Insecta* alone enormously and perhaps incalculably outnumbers all the rest of the animal kingdom? Or of 45 pages for all mollusks? It is not possible that either Kirby or Woodward, masters of their respective branches, can have acquitted themselves profitably within such limits. They must seem to themselves to have merely touched upon their subjects; and their dwarfed work is so far out of all seemly proportion with that put upon the vertebrates, that perhaps the index to the book, covering 48 pages, or rather more than the space devoted to the sub-kingdom *Mollusca*, may be thought a better piece of work of its own kind, with its 10,000 entries, than any class of invertebrates can claim as its own share of the net result. We do not say this in any fault-finding spirit, but in support of our conviction that in every single-volume book like the present, by far the greater part of the animal kingdom is butchered to make way for the mammals, the birds, and the few other vertebrates which the public cares anything about. Consequently, the case remains incurable by any means thus far devised.

Technicality and popularity are incompatible, like science and sentiment. People who like stories about animals care nothing for the biological taxonomy of the beasts, birds, fishes, shells, or insects. It may be said in favor of this nine-author book that it is up to date; but that is all. It does not present an attractive appearance; there is a general air of cheapness which the low price explains but hardly justifies. A better-made book, at a commensurate figure, would have been better policy. The paper and binding are both poor, the type is too close, and the wretched cuts remind us of those zoölogical curiosities with which we were familiar when we used 'Webster's Unabridged.'

Some Observations of a Foster Parent. By John Charles Tarver. Macmillan.

A book about education that is positively entertaining; that puts on no airs, and manages to be both wise and witty in good literary English; and, above all, that does not mention "psychology" or "pedagogy" from beginning to end—this is really a book to be grateful for. When we say that it is a congenial companion to 'The Golden Age,' and that properly-selected pages may be guaranteed to make even the most blasé teacher smile, and add that it contains withal some of the most honest and stimulating writing we have come across, on every range of education, from the three Rs to the university, we have commended it enough to the discerning public.

Mr. Tarver primarily addresses an English audience; and some of the questions he discusses, such as that of Voluntary Schools, have little immediate interest for American readers. But the spirit of the book, if only people will read it, must be even more refreshing on this side of the water than on the other. Perhaps what England wants, among other things, is a little more organization. Here we are in danger of being organized to death; and what with the doctrinaire, on the one side, who wants to "coördinate" everything, and the priestesses of Froebel on the other, the real nature of the average boy is only too likely to be forgotten.

The serious reader who is repelled by the apparent flippancy of the opening chapters, and thinks the author's touch-and-go ease of style a little forced—but then, what a task to make the parent's mind "play freely round its fixed ideas"—the serious reader, we say, may be advised to turn to chapters x.-xiii., containing "a defence of Latin" and a consideration of "the place of Greek." They are, in substance, serious enough for the Committee of Ten. Mr. Tarver, who has had wide experience as a school-teacher, and especially, it would seem from internal evidence, with young boys, strenuously maintains that it is "impossible to devise for boys a better teaching instrument than Latin." And this not at all on account of its literature. Even if Latin literature were finer than it is, "the acquisition of a language is educationally of no importance; what is important is the process of acquiring it." "The one great merit of Latin as a teaching instrument is its stupendous difficulty." "The process of giving an ordinary English boy a sound grasp of Latin is really very little less than putting him into full possession of his intellectual faculties, always excepting the mathematical ones." On the other hand, the author "would banish Greek from the 'preparatory' schools" (in the English sense of the word, including boys up to twelve or thirteen); and in the Public Schools (again in the English sense of the word) he "would treat it as a subject to be taken up when the time has arrived for the boy to specialize." He has "not found any difficulty in starting boys with Greek even at sixteen, assuming that they are boys who have been otherwise well taught."

There are growing up in this country many schools that model themselves on the English "Public School," and, with the growth of wealth and of social stratification, they are sure to multiply. If we are not misinformed, they often far surpass English schools in the comfort and even luxury which they enable their pupils to obtain. And it is here that danger lies. Those who are interested in them might do well to glance over Mr. Tarver's remarks on the increase of "coddling" and its dangers even in England. There is a fascinating account of "an early preparatory school" which Mr. Tarver himself attended, where, marvellous to say,

"there was absolutely no humbug about the place. We slept six in a room; we had no dimity curtains in our dormitories, no carpets by our beds; we had no swimming bath, but a warm bath once a week; we did not learn to dance and only incidentally to sing; we did not boast of a school blazer nor a school magazine, and we only wore gloves on Sundays when we went to church. This school flourished in the most unlikely of localities for more than thirty years; its reputation rested on good sound teaching, both moral and intellectual. And I sometimes ask myself, Could such a place exist now? I fear not."

But we would not end with lamentation. So we will leave with the reader an observation on "the average boy" that strikes us as both amusing and true. After remarking that "the average boy reads his books without reading the names of the characters and places even to himself; he is too impatient to get to the end of the story, and considers the names of very small importance compared with the incidents," Mr. Tarver adds: "His gratitude to the author is so feebly developed that he never looks at the title-page, unless somebody offers to give him a book by the same author, who then appears to him as the name of a brand, not a personage. He talks of a 'Henty' as wine-drinkers talk of a 'Burgundy.'"

Constitutional Studies, State and Federal. By James Schouler. Dodd, Mead & Co. 1897. Pp. 332.

This volume contains the substance of lectures delivered by Mr. Schouler before the graduate students of Johns Hopkins University during the years 1893-'96. The aim, we are told, has been "to trace the origin and progress of those political ideas which have become dominant and fundamental in American government." An examination of the book shows that by "dominant and fundamental" political ideas are meant such as have been embodied in written charters and constitutions.

The work falls naturally into three main divisions, dealing successively with the colonial charters and the early constitutions of the original States, the various documents of union, including the Federal Constitution, and, lastly, the State constitutions since 1789. These different parts of the book are of unequal merit and interest. Beginning with a useful enumeration of the provisions of the charters, grouped under such heads as the structure of the colonial government, "safeguards of allegiance to Great Britain," civil rights, religious freedom, trade, land tenure, etc., the author passes to a study of the Revolutionary bills of rights which preceded the first set of State constitutions, and thence to the early constitutions themselves. The arrangement is logical, and the parts gain the significance of position; the declarations of rights, in particular, have been rather neglected by constitutional writers, as, for that matter, have most of the constitutions which immediately followed them. Mr. Schouler's treatment, however, is slight, and suggests a doubt as to whether we have here anything more than a syllabus worked over into literary form. As regards style, too, it has to be said that Mr. Schouler's well-known characteristics are here seen pretty nearly at their worst. One does not often find, in an historical treatise, seventy pages of harder reading, even for the initiated, or encounter historical facts in such ungainly attire.

The same brevity characterizes the account of the plans of union which preceded the Articles of Confederation. The articles of the New England Confederation and

Franklin's Albany plan, the only ones which Mr. Schouler considers, are, of course, the most important; it would have been interesting, however, to trace the development of the idea in other suggestions, notably that of Penn, in 1696-'97, and the plan proposed in 1754 by the Lords of Trade. The chapters devoted to the provisions of the Federal Constitution cover familiar ground, and form, at the same time, quite the least valuable part of the whole work. In comparison with such an elementary manual as Cooley's 'Principles of Constitutional Law'—whether one considers simplicity of statement, fulness of exposition, or adequateness of illustrative application—Mr. Schouler's pages contain little more than the commonplaces of a high-school text-book on "civil government," and suggest, at the most, only a meagre working outline for graduate students. It is in the chapters treating of the State constitutions that we find the best part of Mr. Schouler's book. Less readable, to be sure, than Bryce, but skilfully avoiding too great detail, the development of both the form and the content of State government during the century is traced rapidly and clearly, and not infrequently with illuminating comment. As an introduction to a field as yet little investigated, these chapters may be commended.

The references to authorities are rather loosely put. Cooley's 'Principles' is cited as 'Elements,' and Story's 'Commentaries' as (p. 24) 'Constitutional Law.' The citation of Supreme Court decisions by volume and page only, without giving the title of the case, greatly limits the usefulness of such references. A few statements need revision. It is at once confusing and hardly correct to say (p. 74, note) that "the New England Confederation kept its vigor and efficacy for some forty years, and until after the accession of Charles II." The Confederation did, indeed, continue to hold meetings until 1684, but its importance practically ceased after 1664 or 1665. That the grants of Charles II. "breathed loving-kindness to his beneficiaries" (p. 14) might, perhaps, be gathered from an exclusive study of the texts of the grants; as a matter of fact, however, Charles was far more concerned to pay his political debts, and keep on good terms with those influential enough to obstruct his plans, than he was to display his affection for his subjects. The statement (p. 270) that "about half of our State executives are chosen for three or four years" should, of course, read "two or four years." But one State, New Jersey, now chooses its Governor for a three-year term. Kansas should not be included in the list (p. 262, note 1) of States having "annual sessions for a biennial Legislature."

The Principles of Chemistry. By D. Mendeléeff. Translated from the Russian (Sixth Edition), by George Kamensky. Edited by T. A. Lawson. In two volumes, 8vo, pp. 621, 518. Longmans, Green & Co. 1897.

The fifth Russian edition of this work was translated by Kamensky, and published under the editorial supervision of Mr. A. J. Greenaway in 1891. The present is almost equivalent to a new translation. It is somewhat surprising that it should be called for so soon, for there are many serious objections to its use as a class-book or text-book of any kind, while it is not full enough for a hand-book or work of reference. But the secret of the wide favor which it enjoys among students of chemistry is that the facts are so strung upon a thread of argumentation and of theory as to render the retention of them in the memory less operose.

We must not, however, be understood as saying that this is the chief claim of this treatise upon our attention. Nothing could be further from the truth, for, as an achievement of reasoning, it must for ever stand as one of the great monuments in the history of the progress of science. It was in writing this book that Mendeléeff discovered the periodic law of the chemical elements. Now there is no kind of physical law so difficult to demonstrate as a periodic law, nor any phenomena so deceptive as those which appear to manifest a periodic character. With very few exceptions, of a trifling kind, all those periodic laws which had been made out were either simply harmonic, or easily analyzed into harmonic constituents, or were supported, as in the case of the law of tides, by deductive considerations. In these cases they had been studied by means of residual phenomena—a method which supposes that the phenomena, at least in their means, are not much deranged by causes in which no regularities can be traced. But the chemical periodicity is extraordinarily complex; it is known to us only by pure induction, and, for reasons which are altogether unknown to us, only very roughly determines the phenomena. Thus, according to the latest calculations of atomic weights by Clarke, there are two cases in which values are transposed in their order of succession. In addition to that, the lacunæ in the list of chemical elements known to us, and the mistaken ideas which prevailed in regard to the chemical characters of some elements, rendered the attempt to discern the true order of nature in this respect excessively difficult. But Mendeléeff's predictions based upon his theory were such as to show a perfect mastery of it and extraordinary confidence in the truth of his *aperçus*. The next three elements to be discovered were gallium, scandium, and germanium. They not only fell into the places indicated by Mendeléeff, but they possessed precisely the properties which he had described them as having.

Considering all the difficulties and the striking success of this purely inductive inference, it may be ranked as second to the research of Kepler into the motions of Mars. But this is not the sole feature that makes the extraordinary work in which it occurs important in the history of chemistry. Mendeléeff's views upon many branches of chemical theory are highly original and suggestive, and are urged home with great force. To be rated rightly, the book should be read consecutively from beginning to end. Unhappily, it is impossible to praise the work of the editor. Errors of every description abound, and the English is here and there such that the meaning is doubtful.

The Personal Equation. By Harry Thurston Peck. Harpers.

This volume contains a number of essays on a great variety of subjects of "contemporary human interest." Some are literary, some political, and one is on a subject quite out of the common way—"The Migration of Popular Songs." We cannot conscientiously say that we understand what the title is intended to convey.

Mr. Peck writes about most of the topics which he discusses like a man of sense, but his style has somewhat a Philistine flavor, and for literary criticism his method is hardly adapted. Of a highly combative turn, he will tolerate no nonsense from the reader, or any one else whom he has at his mercy, but insists that everything shall be distinctly understood and clearly defined as he sees it himself. Yet we are not always sure how clearly he does see it himself. Sometimes what he advances as original turns out on analysis to be rather commonplace, as when he first says that we ought to consider Howells as a "critic," and then explains that he means a critic "of life." As a matter of fact, he does not mean that Howells is a critic at all, but that he has put into his novels life and manners and men as he has seen them. Such a book as 'Silas Lapham' shows us life; the thing it avoids is criticism of life. Mr. Peck is better himself as a critic of life than of books, and in his paper on Marcel Prévost he makes a good defence of the Anglo-Saxon love-marriage, as against the French system of parentally arranged marriages. On Nordau he advances with a whoop, and deals with him in a way that leaves no more doubt as to his meaning than did the old bludgeon-swinger of an earlier critical régime. "Every large hospital for the insane knows his representative—the one sane man in a world of lunatics," has the true ring. The tone of the article is such that it whets our appetite. The reader feels that an actual physical contest between critic and author would be fine sport. Mr. Peck does not like the Germans, and expresses his approval of the declaration made in 'Regeneration' as to German tendencies. But here, in the excitement of the struggle, he is rather carried away, and describes the typical German in terms which really excuse Nordau; for if the race is what Mr. Peck says it is, Nordau can hardly be considered responsible for his acts.

In "The Downward Drift of American Education" there are some very sensible remarks, especially those (p. 341) on the impossibility of including in the curriculum courses in virtue, wisdom, and rationality. He thinks the modern dream is that legislation shall give every one an income, and that education shall make him chaste, temperate, honest, truthful, patriotic, and deeply religious. He thinks that the so-called "liberal" policy in university government has "not raised mediocrity to the plane of scholarship, but has degraded scholarship to the plane of mediocrity," and suggests (as we believe we have done in these columns) that the loss of the old "identity of training," which once bound university men together, is a serious matter. In matters of the mind his ideal is distinctly aristocratic, and he would have the *âme d'élite* of the universities "dominate and control the destinies of States, driving in harness the hewers of wood and drawers of water who constitute the vast majority of the human race, and whose happiness is greater and whose welfare is more thoroughly conserved when governed than when trying to govern." This being so, why has he such a contempt for the German "veneration for authority"? (p. 165). In an article on President Cleveland, he declares that the reason why the great body of the people admired him so much was that their love for political independ-

ence "is all the more intense because of the infrequency with which they ever have a chance to see it."

Hawthorne's First Diary; with an Account of its Discovery and Loss. By Samuel T. Pickard. Boston: Houghton, Mifflin & Co. 1897.

If Mr. Pickard's title-page had been more explicit, it would have read, "Fragments from a Diary Attributed to Hawthorne by William Symmes or one Dickinson." Symmes was a mulatto who lived in Raymond, Me., at the time when young Hawthorne was living there with his widowed mother, from 1813 to 1825. Part of this time Hawthorne was studying in Salem, and the last four years he spent at Bowdoin College, but he was visiting Raymond a good deal from both of these places. During the war, Symmes or "one Dickinson" sent to a Portland newspaper fragments of what was represented as a diary kept by Hawthorne in a book given to him, for the purpose to which it was devoted, by his uncle, Richard Manning, June 1, 1816. Symmes died in 1871, and after his death "one Dickinson" sent another extended fragment from the diary. The handwriting, however, was the same as Symmes's, the explanation being that Dickinson had written for Symmes because the latter's hand was disabled. Mr. Pickard concedes that we have here a circumstance that makes more serious the doubts caused by the conduct of Symmes, who refused to produce the diary. No efforts to recover it have yet been rewarded with success. Mr. Pickard is of the opinion that all doubts regarding its authenticity are more than dissipated by corroborative testimony of various kinds and by the character of the matter written. Certainly, if the diary is a hoax, it is a most ingenious one, and the likelihood that it is one is lessened by the fact that there was never any attempt to make money out of it.

Mr. Julian Hawthorne wrote contemptuously of the diary, in his Life of his father, reflecting severely in advance on much that has since been printed about his own boyhood. Mr. Lathrop, Hawthorne's son-in-law, in his biography of Hawthorne, accepted the diary as genuine and made some extracts from it. He designates one of the entries as "the first instance on record of a mild approach of Hawthorne to writing fiction." The reference is to the account of Hawthorne's conversation with a horse, on pp. 68-73. Symmes represented the diary as abounding in ghost stories, but not many of these appear in the extracts. One about a ghost-defended apple-tree is a good one, and the closing sentence is significant: "I should not be willing to sleep in that garret, though I do not believe a word of the story." Is there not here a suggestion of Hawthorne's vivid imaginative sensibility to the preternatural in conjunction with the scepticism that made his artistic treatment of it possible? There is another anticipation of the mature Hawthorne in the comment on 'Gulliver's Travels'—"The wit is obscene and *the lies are too false.*" Mr. Pickard's presentiment of Hawthorne's style does not impress us as unfounded, and if the diary is not Hawthorne's it is very much such a one as he would probably have written. It does him no discredit, and we sincerely hope that the original book will yet be brought to light and set every doubt at rest.

The Bible and Its Transmission. By Walter Arthur Copinger, LL.D., F.S.A., F.R.S.A. With Twenty-eight Facsimiles. London: Henry Sotheran & Co.; New York: Dodd, Mead & Co. 1897.

This sumptuous volume is a monument to its author's liberality and love of Sacred Letters. Printed on hand-made paper at the Oxford University Press, with type cast from matrices given to the university by Bishop Fell in the seventeenth century, limited in its issue to 220 copies, of which only 150 are offered for sale, it has a unique interest and value for bibliophiles. Its aim is to give an account of the Bible and its transmission, whether in a written or a printed form—alike in the original tongues and by translation—down to the period of the Reformation. A large proportion of the editions described are in the author's own possession, especially those of the Latin text, with the history of which his previous bibliographical labors have honorably associated his name. This prominent reliance, however, on his own collections has occasioned, in parts, a disproportionate treatment which has marred somewhat the symmetry of the book. Where the descriptions are given at first hand, they often have a distinct value for scholars, especially in the case of the less accessible editions. But though the volume gives evidence of a wide use of the older bibliographies, such as Masch's Le Long, the considerable period during which its contents have evidently been accumulating has rendered parts of it antiquated. A thorough use of Dr. Gregory's 'Prolegomena' would have modified and supplemented many a statement. It is a pity, too, that the sheets did not pass under the eye of an expert. Such supervision would have excluded annoying orthography, like Eichorn, Munster, Raschi, Wiesler, Mayer, Vatabli, Blanchini, etc. Indeed, at times it seems almost as though the author could not have read his own proof: witness the blundering statement about the volumes of Swete's Septuagint on p. 89, or the account of Schott's Greek Testament interjected into the history of Griesbach's text on p. 169.

But it is as unnecessary as it is ungracious to catalogue inadvertencies, since they cannot be corrected, the type having been distributed. And if Biblical students are doomed to some disappointment in the volume, they will gratefully appreciate the index, with its "over fifteen hundred separate items of reference." As a consummate specimen of book-making, and particularly by its superb full-page collotype facsimiles, which surpass even the corresponding plates of the Palæographical Society, the work will prove itself a most attractive ornament for the library table.

A New Volume by Charles Dickens

Without it every set is incomplete. The most important publication for lovers of Dickens in years.

"Old Lamps for New Ones,"

and other Sketches and Essays"
HITHERTO UNCOLLECTED

Nothing reprinted in America appears here. The pieces in this book will come as fresh and new to readers in this country as if written yesterday.

Edited, with an introduction, by FREDERICK G. KITTON, Author of "A Bibliography of Dickens," "Dickensiana," "Dickens by Pen and Pencil," etc., etc. Handsome Library Edition, 350 pp., Long Primer. By mail, cloth, $1.25; half calf, $2 50.

The Bookman, N. Y., says: "The stamp of Dickens's mind is upon them all. They bear his unmistakable imprint. The fun and frolic, the wit and humor, the satire and savagery, the advocate of reform and the special pleader of the poor, the intense feeling and burning sincerity—all are here, and as a flame in the midst shedding its glow and irradiating its vital spark throughout, there is the unfailing light of Dickens's imagination."

PUBLISH NEXT WEEK:

Audubon and His Journals. By Maria R. Audubon.

With Notes by Elliott Coues. With many portraits and other illustrations. 2 vols., 8vo, $7.50

Contents:—**Biography—The European Journals, 1826-29—The Labrador Journal, 1833—The Missouri River Journal, 1843—The Episodes.**

In these volumes appears for the first time not only the adequate and correct biography of Audubon, but the full text of his famous "Journals" and "Episodes." Now we have "the living man in place of the death-mask" which has for thirty years passed as a true representation. The entire publication is virtually new. Audubon's romantic life and valuable writings are here given to the public practically for the first time. The Missouri Journals are almost wholly new; the Labrador and European ones largely so, and the Episodes never before collectively printed in English. For the benefit of the scientific readers Dr. Elliott Coues has supplied abundant zoological notes, but the work is really one which appeals in the widest manner to the general public, and is of the greatest interest. Among the many illustrations are three fine examples of bird drawings by Audubon, never before published, and there are also ten portraits, several of which are comparatively unknown.

The Decoration of Houses.

By Edith Wharton and Ogden Codman, Jr. With 56 full-page illustrations. Small 4to, $4.00.

This will be a most helpful work to every one who is interested in "making the best" of his or her surroundings æsthetically speaking. The problems encountered in the attempt to make the interior of one's home look attractive are here met by suggestive descriptions, and a series of photographic illustrations showing the best and most artistic methods of treatment.

THE NEWEST BOOKS:

MRS. BURNETT'S GREAT STORY

THE WOMAN'S SIDE.

A Lady of Quality

Being a most curious hitherto unknown history, related to Mr. Isaac Bickerstaff, but not presented to the World of Fashion through the pages of *The Tatler*, and now for the first time written down by Frances Hodgson Burnett. 12mo, $1.50.

TWENTY-SIXTH THOUSAND.

"The plot is excellent, and an unflagging interest is maintained from the first page to the very last. The character of Clorinda—the wild artful child, the beautiful Mistress Wildairs, the comparatively excellent Countess of Dunstanwolde, the superlatively noble Duchess of Osmonde—is drawn with great originality and wonderful vigor."—*The Critic.*

THE MAN'S SIDE.

His Grace of Osmonde

Being the Portion of that Nobleman's Life omitted in the Relation of His Lady's Story, Presented to the World of Fashion under the title of "A Lady of Quality." By Frances Hodgson Burnett. 12mo, $1.50.

TWENTIETH THOUSAND.

Just Published.

"Not many writers live who could have drawn this man so finely and made him so real. His character alone gives the book a valid excuse for existence, but the story is so interesting and so artistically written that even the readers of 'A Lady of Quality' will be held to the end."—*Boston Herald.*

Social Life in Old Virginia

By Thomas Nelson Page. With Illustrations by the Misses Cowles. 12mo, $1.50.

A vivid picture, in Mr. Page's usual fascinating style, of the conditions and manners that existed among the ante-bellum gentlefolk of Virginia, which is admirably supplemented by the illustrations, imaginative and realistic. The latter form a very unusually artistic and striking series, and help one greatly in obtaining an idea of the people and things described.

This Country of Ours

By Benjamin Harrison, ex-President of the United States. 12mo, $1.50.

"The most lucid and entertaining exposition yet put in print of a subject of which we will venture the opinion three-fourths of the people in this country have only an indefinite understanding."—*Phila. Evening Bulletin.*

London: As Seen by C. D. Gibson

THIRD EDITION.

Written and illustrated by Charles Dana Gibson. Large folio, 12x18 inches, $5.00.

This handsome volume contains 48 of Mr. Gibson's drawings, 27 of them being full page, of characteristic London scenes; royalties, the celebrities of art and literature and the army, social functions, street types, etc.

"Easily the noteworthy volume of the holiday season."—*Boston Beacon.*

The First Christmas Tree

By Henry Van Dyke. With full-page illustrations by Howard Pyle, reproduced in photogravure, decorative borders, illuminated title, and a striking cover design. 8vo, $1.50.

"No more exquisite prose-poem has been written for many a day."—*Chicago Evening Post.*

Gloria Victis

By J. A. Mitchell (Editor of *Life*). 12mo, $1.25.

A new book by the author of the popular "Amos Judd," now in its seventh edition. It represents his most important literary work thus far and presents more sharply etched views of certain aspects of New York life than have ever before appeared.

Old Creole Days

By George W. Cable. With 8 full-page illustrations and 14 head and tail pieces by Albert Herter, all reproduced in photogravure, and with an original cover design by the same artist. 8vo, $6 00.

"A gift book for the holidays, in which a piece of real literature is really illustrated in a manner that leaves nothing to be desired."—*Brooklyn Life.*

The History of Our Navy

From its Origin to the Present Day. 1775-1897. By John R. Spears. 4 vols. 12mo, with 400 illustrations, maps, and diagrams. $8.00.

"On the whole the best history of the United States navy thus far published."—*Army and Navy Journal.*

The Workers

An Experiment in Reality: The East. By Walter A. Wyckoff. With illustrations. 12mo, $1.25.

"It has already aroused a very great deal of interest, which is certainly likely to increase. . . . The experiment in itself is a most wholesome one, and one the narration of which is likely to do considerable good."—Mr. Samuel Gompers, Pres. Am Federation of Labor.

"Bishop Potter, himself an authority in these matters, who has been called upon to arbitrate in labor troubles, speaks in most unqualified terms of the good this book will accomplish."—*The Evangelist.*

History of Intellectual Development

ON THE LINES OF MODERN EVOLUTION.

Vol. 1—Greek and Hindoo Thought; Græco-Roman Paganism; Judaism; and Christianity down to the Closing of the Schools of Athens by Justinian, 529 A.D.

By JOHN BEATTIE CROZIER, Author of "Civilisation and Progress."

The *Times* says:—"It is not easy to do justice to a work which testifies to wide reading, a genuine desire to see truth, and an unmistakable power of expression."

The *Westminster Review* says:—"It promises, when complete, to be the most important work of the kind issued since Comte's 'Positive Philosophy.'"

"The Rev. JOHN PAGE HOPPS, in the *Coming Day*, says:—"Although dealing with a vast number of apparently unrelated subjects, it reminds us of a cunning hand holding a golden clue through a dense forest . . . This delightful study. . . . As much an amateur's as a professional student's book."

The *Manchester Guardian* says:—"The bulk of the work, which deals with Judaism and Christianity, is of greatly superior quality. . . . His method has the advantage of giving room for bri f and comprehensive characterisations, as well as for vivid pictures, notably a remarkable picture of Jesus himself, painted with a firm hand and with excellent directness and disregard of controversies which have in course of time become needless."

T. P. O'CONNOR, in the *Weekly Sun*, says:—"I call it at once and emphatically a great, I might even say a very great, book. . . . This fact remains incontestable, that it has come from a mind more richly stored with information of the profound, more penetrating and original, than almost any of our time; and that the style, with all its almost sombre simplicity, is that which would only be obtained by a man with a very high and distinguished literary gift."

The Rev. MARCUS DODS, D.D., says in the *Bookman*:—"Vast and complicated as is the subject which Dr. Crozier handles, there is nothing crude and nothing dim in its presentation. On the contrary, his work upon any special department of thought will stand comparison with that of experts. He has a genius for seizing upon the essential points and for eliminating all that is accidental or mere excrescence. He has also a genius for exposition, concealing all that is ponderous, and brightening his pages, as well as aiding his reader, by felicitous illustration. His work is one of the most considerable additions recently made to philosophical literature, and is so devoid of technicalities that it should find a public beyond the schools. . . . There is no part of his work which is not fruitful. The development of the idea of God among the Jews has never been more lucidly or succinctly presented even by a specialist. The Messianic idea, its growth and culmination in Jesus, will be better understood from the few pages in which Mr. Crozier hides an immense amount of thoroughly digested reading than from many ponderous volumes. The book is sure to receive the attention of all thoughtful persons."

MR. MALLOCK, in the *Fortnightly Review*, says:—"Dr. Crozier's book appears to me to possess a singular value. . . . There is hardly a chapter in the entire volume which does not stimulate thought to a very high degree. . . . His method of study is, at all events, the true method."

Literature says:—"While he is under considerable obligations to predecessors, which he does not ignore, Mr. Crozier has a distinctive point of view of his own. Objections might no doubt be made in many places to particular positions, but the course of development is well grasped as a whole."

The King's Story Book.

Edited, with an introduction, by GEORGE LAURENCE GOMME. With photogravure frontispiece and 21 full-page illustrations. Crown 8vo, cloth, extra, gilt top, $2 00.

This is a Christmas book of a novel character, and consists of selected stories from the Historical Romances, each reign from the Conquest to William IV. being represented. Scott, Thackeray, Dickens, Leigh Hunt, Charlotte Bronte, Mrs. Shelley, Galt, Charles Kingsley, Bulwer Lytton, and other writers are laid under contribution, so that the volume presents specimens of the best writers, and is interesting, therefore, from a double standpoint.

Falklands.

By the Author of "The Life of Sir Kenelm Digby," "The Life of a Prig," &c. 8vo. $3.50.

*** In his "Life of Sir Kenelm Digby," recently published, the Author presented a portrait of a seventeenth century "amateur." Dealing with much the same period, he has endeavored in "Falklands" to describe two Viscounts and two Viscountesses bearing that title, who severally developed some of those conflicting "views" which have become such a prominent feature of English family life in later times.

NEW NOVEL BY MRS. WALFORD.

Iva Kildare: A Matrimonial Problem.

By Mrs. L. B. WALFORD, Author of the "Matchmaker," "Mr. Smith," etc., etc. Crown 8vo, 338 pages, $1.50.

LONGMANS, GREEN, & CO., Publishers, 91-93 Fifth Ave., New York.

The Nation.

NEW YORK, THURSDAY, DECEMBER 2, 1897.

The Week.

Secretary Gage very properly excused himself last week at the Chamber of Commerce dinner from making an exposition of his plans for currency legislation, saying that it would be his duty to make an official statement on that subject soon. He made an admirable summing up of the situation, however, by saying:

"In a word, I commit myself to the following proposition: At a cost too contemptible for serious consideration, the debatable condition of our currency and banking system may be put upon clearly safe if not theoretically scientific foundations. This may be secured without any necessary contraction of the circulating medium of exchange and with no danger of an undue expansion, and, best of all, this desirable end may carry in its effects potential relief to those districts in the South and West which, though rich in possibilities of soil and climate, have been held back through the absence of banking capital and credit facilities."

The ease with which the desired end might be reached constitutes the very difficulty in the case. The opposition of the Bryanites of all varieties lies against everything in the nature of currency reform. The simpler it is, the more they don't want it. Anything different from the free coinage of silver at the ratio of 16 to 1 is regarded by them as a condemnation of the Chicago platform, and the more you show them that any particular plan would improve the conditions of business, the more sternly will they set their faces against it. Business troubles are the very breath of their nostrils. They are convinced that troubles will continue as long as the currency question remains unsettled, and as long as the standard of value is uncertain, and they are equally convinced that business disturbance will make votes for them in future elections. It will be something wonderful if the Republicans in Congress do not see this during the coming session, and set themselves earnestly at work to pass some measure which shall be recommended by the Secretary of the Treasury. It is no answer to say that they cannot control the Senate. They never will control the Senate, nor will they control the next House, unless they try to pass the needful measures. If they can improve those which the Secretary sends to them, so much the better, but to do nothing and seek to do nothing will be, in our belief, political destruction to the majority of them.

It is obvious that if things go on for the remainder of the fiscal year as during the past five months in the matter of revenue, the deficit on the 30th of June next will be $108,000,000. Some improvement in customs receipts may be expected, but so good a Republican authority as the Washington correspondent of the Philadelphia *Ledger* says that, while it is very probable that there will be considerable increase in such receipts during the last quarter of the year, "that increase will not prevent the deficit for the year approximating $75,000,000, unless there shall be a large cut in expenditures." Such a cut, by the way, could be made only through the action of the Secretary of the Treasury in "holding up" appropriations which were made a year ago, to be paid for "out of money in the Treasury not otherwise appropriated." Such relief would be only temporary, and the problem of preventing a great deficiency during the fiscal year 1898-'99 would remain quite as difficult, if appropriations should be made on the same scale the coming session as a year ago. The members of the committees are so much impressed by the seriousness of the situation that Representative Bingham of Philadelphia, who has charge of the legislative, executive, and judicial bill, says that they will "carefully scrutinize the estimates, and authorize no expenditure for any purpose that is not deemed essential to the proper conduct of the government and demanded by the public interests"—by which course he believes that the aggregate of all the bills can be safely reduced by $50,000,000.

One feature of the Dingley bill, it is announced from Washington, is giving the President concern, and his message will touch upon it. This is "reciprocity," and its failure to work. But how can Mr. McKinley refer to the Dingley bill at all without confessing its colossal failure in its professed main intent of raising a revenue? How can he fail to urge upon Congress now, as he did last March, the duty of raising a revenue "large enough to meet with ease and promptness" not only "current needs" but increased pensions, and to do it "without delay, hindrance, or postponement"? Here we are at the end of the fifth month only of the fiscal year, and the deficit is $46,000,000 and steadily mounting. The chatter about "advance importations" being responsible has ceased to be even plausible. In his most lavish moment Mr. Dingley estimated the loss on this score at no more than $30,000,000. Well, his bill has heaped up $16,000,000 more of deficit in four months. To go on flattering the country with false hopes about his bill any longer is to pile folly upon folly. The bill is now a confessed, a ghastly fiasco. Unless mended in the coming session of Congress, it bids fair not only to ruin the Republican party, but to cripple the Treasury and chill business. It is only a question of time when Master Dingley will have to eat his humble pie, and he had better begin to bolt it as soon as possible. It is bad enough for a man of his superior airs to have made a revenue bill which, in a time of expanding business, piles up a bigger deficit than the Wilson bill did in years of panic; he surely must see that it will only make matters worse, for both his reputation and his party's, to go on romancing about his tariff.

Nobody will even explain how the President is going to reconcile the Treasury Department and the Department of Agriculture on the subject of beet sugar. The Treasury officials, in their continued "cheerfulness" (now a little forced) over the deficit, say that importations of sugar must soon begin again, and that then the revenue must be simply luxurious. But Secretary Wilson says that, under the wise rule of a President who "sympathizes" with those who toil on the farm, the beet-sugar industry is going to be developed to such a degree that we shall soon grow all our own supply, and not import a pound of the accursed foreign stuff. But can a President truly sympathize with the toiling farmers who proposes to subject them to the ravages of competition with 45,000 underpaid Japanese and Chinese? Can the beet industry be built up with one hand and knocked down with the other? We must raise our own sugar and pay a bounty to do it; but we shall have no money to pay bounties, or even pensions, unless we go on importing sugar in large quantities; therefore, annex Hawaii. That seems to be the logic, as far as we can make it out.

The Washington *Post* has a nice lot of epithets which it applies to those who think that the consent of the Hawaiians ought to be obtained before they are annexed to the United States. "Mugwumps," "Cuckoos," and "political eunuchs" are among the choice expletives collected out of its vocabulary for this purpose, and applied to the Indianapolis *News* and the New York *Evening Post*. The last of these phrases seems to be more fitly applied to newspapers published in the District of Columbia, where adulation for the President is all the more excessive because no votes are ever cast for that officer. The doctrine that governments derive their just powers from the consent of the governed, says this Washington paper, "was fitly characterized by Rufus Choate as a glittering generality." Quite true, and when Rufus Choate spoke thus he referred to the institution of slavery—"the peculiar institution," whose chief pecu-

liarity lay in the idea that governments derive their just powers from the arm of the strongest. This idea is evidently coming to the surface again. There could be no better evidence of this fact than the Hawaiian annexation project, in which, from first to last, there has been no more thought of asking the consent of the governed than there was in ante-bellum days of asking a slave whether he would prefer to live in Virginia or in Louisiana.

The real discouragement of those who oppose the annexation of Hawaii, on public grounds that can be discussed, is that the men who are going to do the annexing do no discussing. They are there to annex, not to say why they annex. At least, if they do give any alleged reasons, we may be sure that the real reasons are concealed. Mystery and intrigue have, in fact, marked the whole of the present annexation scheme. Why the President suddenly changed his mind, or had it changed for him, is a mystery which has never been explained. What the exact relation of the treaty was to the tariff has never been made clear. Then there is sugar--especially beet sugar. Why were the beet-sugar Senators so furious against the competition of Hawaiian cane sugar under reciprocity, but so reconciled to it under annexation? Does a mere change of name make competition smell sweeter? Does not Hawaiian sugar just as truly remain sugar grown by Yellow Lepers? And is the honest American farmer, paying high wages, to submit to Almond-Eyed cheap labor and Japanese pauper competitors under the American flag? These are mysteries which we should much like to see cleared up.

The prevalence of leprosy in the Hawaiian Islands is gaining some attention in the press as the time approaches for considering the question of annexing the country. A thoughtful article on this subject appears in the current number of the *North American Review* by Dr. Prince A. Morrow, who appears to have no political bias, but looks at the question from the medical standpoint only. Ten per cent. of the Hawaiian race, he says, are affected by this incurable malady, and although all the resources of modern science have been brought in requisition to combat it, the percentage remains as large as ever. Leprosy, he says, is a communicable disease. Its active cause is a micro-organism called the *bacillus leprœ*. It is invariably derived from the lesions or secretions of a person similarly diseased. How the bacillus enters the organism of a person in sound health, whether by inhalation, by imbibition, or by contact, is not known, yet "observation proves conclusively that every leper is a possible source of danger to all with whom he may come into intimate and prolonged contact." That the disease is not hereditary is proved by the fact that children of lepers, if removed from the presence of their parents, rarely develop the disease. On the other hand, many foreigners coming to Hawaii from countries where leprosy is unknown, have fallen victims to it. One-tenth of all the revenues of the Government is spent in the leper hospitals and in expenses caused by the existence of the disease in the islands. No lepers ever regain health. The disease is progressive. Most of those who are sent to the leper colony die within three to six years. "All the indications point to the existence of a vast deal of latent leprosy, which, as the disease develops into a recognizable form, must continue for many years to come to furnish a constantly recurring series of subjects for the leper colony."

Dr. Morrow next considers the question whether the annexation of the islands would expose the United States to dangers from the communicability of leprosy, and he is decidedly of the opinion that it would, especially in the Southern States, where a warm and moist climate is favorable to the lodgment and spread of the disease. The principal danger, he says, would come from the establishment of more intimate commercial relations, the opening up of new enterprises, inviting capital and labor, and the consequent influx of Americans into the islands and their exposure to contact with the tainted population. That such contact is not devoid of danger is evident from the number of foreigners who contract the disease. Within the last ten years the number of foreigners sent to the leper colony has averaged from 3 to 5 per cent. of the whole number. These statistics, however, do not convey any fair idea of the number of foreigners stricken with it, since the Board of Health give foreigners who have contracted it the privilege of leaving the country. Many foreigners learn the nature of their disease from their own physicians, and voluntarily return to this country or to Europe for treatment. "A number of such cases," he adds, "have come under my personal observation."

The Choctaws in the Indian Territory held a convention last week, at which a delegate was elected to go to Washington and protest against the ratification of what is known as the Choctaw-Chickasaw-Dawes treaty, framed by a commission headed by ex-Senator Dawes and representing the United States Government on the one side, and spokesmen for the Indians on the other side. The convention also adopted a memorial to the President "objecting to the treaty as a whole, because it does not represent the views of the majority of the people, and stating that the ratification of the same was procured by unscrupulous means." This shows clearly that the Choctaws are not "up to date." They cannot have studied the history of the Hawaiian annexation scheme. If they had done so they would have learned that the time has gone by in his country when we mind little questions like the rushing through of a treaty by unscrupulous means and in defiance of public sentiment. Our statesmen, under the lead of our divines, are too busy guarding against the dangers of Jesuit ascendency in the United States to bother with any "d——d nonsense" from a lot of barbarians who claim that they are being cheated out of their rights.

It seems to be taken for granted that one of the first measures passed by Congress will be an act for the further restriction of immigration. The general disposition is to make ability to read the Constitution of the United States, either in English or in any other language, the test of admission, except for the very young, or the old whose parents or children, as the case may be, are either already here or are eligible to admission under this educational qualification. This was the main feature of the bill which Mr. Cleveland vetoed in the last hours of his administration, but it was then combined with a provision regarding the passing to and fro of Canadians living near the border, which will now be omitted. The feeling in favor of such a measure seems to be strong, and there is no prospect of any effective opposition in either branch of Congress. The approval of the President may be taken for granted.

The tide of immigration, which had been ebbing since the effects of the prolonged business depression came to be fully understood throughout Europe, has but just begun to turn. During September the arrivals were 20,450, as against 20,338 in the same month of last year. In July and August, on the other hand, the total had been only 28,776, whereas 40,312 had come in July and August, 1896. Now that there has been a recovery to an equality from so heavy a falling off, it is reasonable to expect a decided gain. The educational test will operate chiefly against the countries of southern Europe, where illiteracy is densest. Italy will suffer materially, but not so seriously as would have been the case a few years ago, for in the last quarter reported only 7,952 immigrants came from that country, as against 9,832 in the corresponding months of 1896, and many thousands more in the same period of previous years. Hungary is another nation which will be hard hit by an educational test, but there too the passion for coming to the United States has lost much of its former strength, and arrivals were but 2,252 in July, August, and September of this year,

while they were 4,060 in the same months of 1896.

The great question whether Mr. Croker is in favor of Mr. Hill or Mr. Murphy as the Democratic leader in this State, is of interest chiefly as calling attention once more to the fact that the advocates of honest government no longer have an alternative to turn to when one of the parties becomes too offensive to be tolerated longer. If they revolt from Platt and Black, they throw themselves into the arms of Croker and Murphy or Croker and Hill. There may be a choice between these two combinations, but it is difficult to find it. Hill is in some respects the superior of Murphy, for he can make a speech and Murphy cannot, but the political methods of the two are on the same level. What the voters of the State have to contemplate for next year is a candidate for Governor selected by one or the other of them and put in the field with virtually absolute certainty of election. Croker's supposed preference for Murphy's leadership is said to be based upon his desire to see Murphy's son-in-law, Hugh J. Grant, made the candidate. This would put Tammany in possession of the governorship as well as of the mayoralty of New York, and would put the government of the State as firmly in Croker's hands as it was last year in Platt's.

The McKinley Administration is allowing a scandalous performance on the part of the "Bureau of the American Republics." It has been the practice of this bureau to seek advertisements for its publications, which must, from the very nature of the case, be an unwarrantable extension of the Government prerogative. Now, under the management of Joseph P. Smith, the director of the bureau, it is going a step further, and utilizing the prestige of the United States to secure financial support for a "Commercial Directory" of the various republics. This would be bad enough, under the best conditions, but it is rendered worse by the fact that the Government is making the advertising department of this publication a means of what falls little short of extortion. The announcement is officially made by the bureau that any business man who will contribute $5 may have his name inserted in this directory, provided the Director "is satisfied of the high standing of the advertiser for fair dealing and entire pecuniary and business responsibility." The man who does not pay his $5 has no assurance that his name will be inserted, and thus compulsion is put upon all who seek business in Central and South America to make the payment. This business is sought after the method of advertising agencies—with this difference, that the bureau pays no postage in sending out its application, and encloses in each case an addressed envelope for the reply, which bears the printed warning, "Official business, penalty for private use $300." The Government thus enters directly into competition with any private citizen or business firm engaged in a similar enterprise, and puts the latter at the disadvantage of paying postage bills while it uses the mails for its own directory free of cost. This, however, is a petty scandal compared with the moral wrong done the private citizen and the national good name when the Government leaves its proper sphere to invade the business field, and professes to certifiy to the financial soundness of its patrons for a fee.

It appears that the incredible is not going to happen, after all, and that Spain does not really propose to give Cuba a free hand in making her own tariff. The real plan has been explained to the protesting exporters of Barcelona, Bilbao, and Santander. It is to have the Cuban tariff framed by a mixed Commission of Cubans and Spaniards. The rates fixed by this Commission will require the approval of the Cuban Chamber, and also, before becoming effective, that of the Spanish Cortes This, of course, reserves the real control of the matter to Spain, and the exporters who have had such tariff advantages in Cuba, and have made such fortunes in Cuban commerce, may be reassured. But all this should please Mr. McKinley more than ever; he, of all men, ought to have a kindly feeling for manufacturers who will die in their tracks, and see their country go to ruin, before they will consent to give up their tariff favors.

The President of the Board of Trade told the striking engineers in London last week that the competitor they had most to dread was not Germany, but the United States. He spoke of contracts for steel and iron manufactures right in the City of London carried off by Americans, and said that the latter were now successfully bidding against the English in India and Egypt and Japan. This is in line with the recent testimony of Mr. Jeans of the *Iron and Coal Trades Review*, to the effect that Great Britain can no longer compete with the United States in the production of either pig iron or finished steel. These facts throw into ludicrous relief Mr. Dingley's duties of $4 a ton on pig iron, and $7 a ton on steel rails, to "protect" them from dreaded English competition. His whole bill, however, was framed in such entire disregard of the great facts of a world's competition for a world's market that it reads as if drawn by some protectionist of antediluvian times, or by a man living down a well. As a very beginning, he considerately laid his cards on the table for his opponents to see—that is, he gave them four months' time in which to sell this country vast quantities of goods under low duties. The word went round like lightning among exporting nations, and instantly every harbor of ours was crowded with foreign ships. Yet poor Mr. Dingley thought he was making a law to keep out ships. The manufacturing nations chuckled as if a new African tribe had been discovered desiring $40,000,000 worth of goods at once. It had been discovered, in fact, and Mr. Dingley was chief untutored savage, as he showed by his rage and wonder at our commercial rivals taking the tricks he had innocently offered them. But this, after all, amusing blunder as it was, was as nothing compared with the way in which Mr. Dingley went to work to disable great manufactures from competing in the world's market, by laying ruinous taxes upon their raw materials.

A curious complication has arisen in France over the Dreyfus affair. Dreyfus, under the civil law, cannot escape unless there is a condemnation of some other person for the same offence, or unless new proofs are produced simply clearing him. But in the first case these new proofs cannot be made available for the benefit of a convict without trying this other person. This trial, however, cannot be had on the motion of a private person or of the convict himself. It must be instituted by the Minister of Justice. In the case of military justice the Governor of Paris or the Minister of War must institute it. Consequently, no matter what proof may be produced against Esterhazy or any other man, it cannot do Dreyfus any good unless somebody else is tried and condemned for the very charge made against him. Of course, if the new proof simply showed Dreyfus's innocence, without implicating anybody else, he might be released, but the new proofs do implicate somebody, so there he is dependent on the willingness of the Minister to try Esterhazy or somebody. French criminal jurisprudence makes escape from a charge as difficult as possible. Ours makes it as easy as possible. It is only very recently that the power to shut up an accused man and torture him with secret examinations for an indefinite period has been taken away from the *juge d'instruction*, or police magistrate, in France. Until now, accusation of either "crime" or "délit" entailed strict seclusion from a man's family and counsel, and ignorance of the full nature of the charge against him, and this lasted until the magistrate had got tired of worrying him. It was only when his trial had been determined on—that is, when he had been, as we say, "committed"—that his friends and his lawyer had access to him. It was an extraordinary system to last in a most highly civilized country until our time.

THE DO-NOTHING POLICY.

The *Herald* publishes a telegram from Senator Allison, saying that "there will be no currency legislation of any special value at the coming session of Congress, for a reason which is apparent, unless three or four Senators at least have changed their opinions since the last adjournment." This prediction is somewhat elastic, since it is possible that three or four Senators may have changed their opinions as to some phase of the currency question, and since the words "legislation of any special value" may be interpreted differently by different persons. Thus, in the *Herald's* collection of opinions of Senators, we find Mr. Cockrell of Missouri quoted as in favor of retiring the greenbacks in order to create a contraction of the currency, and thus make the free coinage of silver necessary. Mr. Cockrell says that he is also in favor of allowing national banks to issue notes to the par value of the bonds deposited by them. Senator Cullom agrees with Senator Allison, but thinks that it might be possible to pass "a simple little act stopping the endless-chain business by requiring that when greenbacks are taken from the Treasury, gold must be deposited." This may be considered by some Senators as a measure not of any special value, and it may be considered by others as a measure of very great value. So we see that Mr. Allison's telegram from Dubuque, although depressing on a superficial view, leaves some ground for encouragement.

In connection with these senatorial opinions the *Herald's* correspondent confirms what Mr. E. V. Smalley wrote to the *Evening Post* on the 20th inst., that the President would recommend to Congress a bill to retain in the Treasury all greenbacks hereafter redeemed, and not to reissue them except in exchange for gold. It is added that in order to carry this provision into effect, he will ask for authority to sell low-interest bonds sufficient to allow the retention of all the greenbacks so received. The same authority exists now as existed during President Cleveland's term to issue bonds for redemption purposes, but these bonds must be of the kinds described in an old act of Congress, where the lowest rate of interest specified was 4 per cent. Naturally the President would like to have authority to sell a 2 or 2½ per cent. bond, because the Government can make better terms by selling a low-interest bond at par than a high-interest one at a premium. Yet it might not be easy to pass a new bill for issuing bonds, nor is it absolutely necessary. If the bill to retain the greenbacks and to reissue them only in exchange for gold is passed, it can be executed without difficulty under the powers with which the Secretary of the Treasury is already clothed, and which have been exercised four times within the last four years.

While Senator Allison's telegram does not exclude the hope of legislation of a beneficial kind, the tone of it is not to be commended, since it is calculated to produce torpor in others and to strengthen the do-nothing policy. This is, of all things, the most to be avoided. It was the do-nothing policy, followed in spite of the efforts and entreaties of President Cleveland and Secretary Carlisle, that caused the panics and stagnation that beset all business interests during the four years mentioned. We have had a brief rally, due to good crops and high prices of grain, but we cannot expect these conditions to last. Permanent prosperity can come only from a permanent cause. The Republican party is committed to the notion that the Dingley tariff is such a cause, but already that belief has been seriously shaken. It has been shaken by the business reaction which has evidently set in, and by the failure of that tariff to produce the revenue promised by its framers and required by the Government. If the do-nothing policy continues, the business depression will deepen, and this will operate against the Republicans in the next congressional elections. The prospect for the party in those elections is already very gloomy, and it is doubtful whether the ground lost by the wretched Dingley bill can be recovered. It can be recovered only by changing the issue and giving the public something else to think of.

Under the present conditions of national politics the independents who supported Mr. McKinley last year must continue to desire the success of his Administration. At all events we desire it, and shall hope that success may be attained because deserved. The do-nothing policy is death, because it detaches from the Administration and the party an element without which it would have been beaten last year and will be beaten hereafter. Of course we cannot demand impossibilities. We acknowledge that the Senate has not a Republican majority, but that is no reason for abandoning all effort to reform the currency. It is reason, on the contrary, for redoubling efforts. If the political elements which we have referred to see an earnest and genuine fight to that end, not a mere make-believe, they will contribute their influence and their votes to the common cause hereafter, and with the assured hope of ultimate success. If, on the other hand, they see only a disposition to surrender before the battle, such as Senator Allison's tone implies, they will withdraw from the company of the do-nothings, whatever consequences may follow.

THE WHOLE TRUTH.

The *Tribune* had an article last week showing, what is perfectly clear, that the real credit of the Democratic victory was due to Platt. This is easily seen, but in the eyes of a great many people he probably seems to have won this credit by what billiard-players call a "fluke"—that is, to have won the victory for the Democrats unintentionally; honestly thinking he could elect Tracy, and electing Van Wyck only by accident. We think it can be easily shown—it certainly could in any department of life except politics—that this theory will not hold water; that from the day the Greater New York charter was introduced into the Legislature down to the day of the election, there were the strongest signs of deliberate conspiracy.

In the first place, no reason for providing the city with a new charter just now was ever given. There was nothing in the city's condition or prospects which made it necessary. There was no demand for it by the citizens either in New York or in the districts which it was proposed to annex. The scheme was hatched secretly at Albany by the politicians, and no politician on either side offered any opposition to it.

In the second place, the leading and active persons on the commission were Gen. Tracy, Gilroy, a man who had just left the mayoral chair under a cloud, and was living in luxury on a fortune the origin of which was not known, and President Low. Now, Gen. Tracy's part in the affair since would fully justify, by the laws of human understanding, if not by the law of evidence, the belief that he was cognizant from the beginning of the object for which the charter was prepared, and in running for the mayoralty was but carrying out an agreement for coöperation long previously entered into. His business relations to Platt strongly corroborate this presumption.

In the third place, no explanation of the haste with which the charter was drawn, and of the desire to have it ready for this election, in spite of strong remonstrances from every quarter, was ever offered. The work was one of such extraordinary complexity that the necessity for doing it slowly and carefully, and after much consultation with outside experts, was plain even to the meanest understanding. Two years would not have been too much for the construction of such an instrument. As a matter of fact, the charter was drafted in about six weeks, and much contempt was expressed by the subordinates employed on it for the criticism of all persons opposed to the scheme. In any business matter, unexplained haste like this would have aroused the gravest suspicions and an explanation would have been insisted on.

In the fourth place, the criticisms of nearly all the leading bodies representing the property, trade, and intelligence of the city were not simply disregard-

ed—they were not noticed or in any way answered. In business matters—in the management of a railroad or insurance company, for example—this course alone would have been taken as a presumption of fraudulent designs, and would, if persisted in, have been treated accordingly. What capped the climax, however, was the disregard of the opinion of the Bar Association. This opinion was, to all intents and purposes, counsel's opinion on the charter or organic law of a business corporation, much weightier, owing to the standing of the body which gave it, than such opinions usually are. These experts said of the charter as drawn:

> "The proposed charter of the commission is not a charter in any proper sense, and it is not a code. It is an imperfect compilation and, to some extent, a condensation of the laws affecting the territory of the proposed greater city."

They then said it was a "deplorable" outcome, and expressed the belief that, if made a law, it "would give rise to mischiefs far outweighing any benefits which may reasonably be expected to flow from it."

Fifthly, this charter, thus characterized by the weightiest authority we have, was passed by the Legislature without any discussion. All objections and criticisms and all requests for delay were received in dead silence, and the bill was passed in hot haste. Now this is so contrary to the practice of all legislatures of civilized states that it must be considered, and, we think, would be considered by any competent tribunal, proof of fraudulent intent. Of course, there would be, if any investigation could be made, many corroborating circumstances—the character of the Legislature, the power of Platt over it, as shown in other matters, and the possible gains of this conduct to individual members.

This brings us down to the election, and the proof of conspiracy only grows stronger as we approach it. We are far from insinuating that Mr. Low was a party to these evil preparations. His subsequent conduct indicates, if it indicates anything, that he was the dupe of craftier men. Platt's fury at having him present himself as a candidate, and the selection of Tracy to oppose him, have the marks of some severe disappointment. It goes to show that it was no part of the plan to have the charter put in motion under a non-partisan régime. Nearly all the facts which are coming to light indicate that the election itself was simply the carrying out of the scheme in which the charter originated, and that both parties were working together in the election as well as the drafting. More light will probably be thrown on the whole matter by the distribution of the offices. Should there be an equitable division of the spoils, no man gifted with ordinary reasoning power will acquit Platt of having entered into a conspiracy last spring with the Democrats to use his Legislature to gather up the largest amount of public plunder ever accumulated in one mass in America, and then hand it over to the party which could most easily win at the election, on condition of receiving himself a fair proportion. It will not do to treat the vote of November 2 as an isolated event. It seems the consummation of a scheme of villany concocted nearly a year previously.

FUTILITY OF PRIMARY REFORM.

As our readers are aware, we have little faith in the efficacy of plans for reforming the primaries by means of amendments to the laws regulating their conduct. Our view, as frequently expressed, is that the experience of many years has made it certain, first, that the much-exhorted "good men" will not attend the primaries except on extremely rare occasions; and, second, that when they do attend, they are no match for the machine men, whose lifelong practice in the tricks of their trade enables them to come out ahead in almost every contest. A different phase of the subject is presented in a letter from Plattsburgh published in the *Evening Post* of Saturday. This shows that, so far as the law of New York State is concerned, it vests such absolute power in the hands of the party organization, or the machine, that any primary action, under any system, which does not meet the approval of the boss can be set aside, and such action as he desires can be substituted in its place. He is really the court of last resort in all questions concerning the legality of primary procedure.

The history of the various contests which have led finally to a decision of the Court of Appeals confirming this view of the boss's power is extremely interesting. In Clinton County the anti-machine Republicans acquired sufficient strength, working inside the party, to carry the primaries for the election of delegates to the convention which was to nominate a candidate for the Assembly. When the machine men discovered this fact, they concocted bogus "contests" and appealed to the county committee to make up the roll of the convention. The committee responded by making up a roll which gave the machine men a majority. The result was two conventions and two nominations. A similar case occurred in Cortland County, and more recently one occurred in regard to a Congressional nomination in Westchester County. Last year Warner Miller carried the regular Republican primaries in Herkimer County and was elected a delegate to the State convention. A "contest" was got up in his case, as it had been in the others. In all these instances the primaries had been carried regularly; the good men had gone into them, had obeyed all the rules, and had emerged triumphant. The machine men had refused to abide by the result, had really bolted and made separate nominations, but, when they had appealed to the county or State committee, or State convention, had been declared "regular," and their successful opponents had been barred out. Furthermore, the men who had carried the primaries were not allowed to have the names of their candidates printed on the ballots, while those of the bolters were put on as the regular nominees. Warner Miller appeared at the door of the convention hall only to be denied admission, on the ground that the State committee had declared him not to be the "regular" delegate.

The Westchester case was carried to the Court of Appeals, and Gen. Tracy, the law partner of Mr. Platt's son, appeared as the champion of the machine as the supreme power in all such matters. His contention was that the courts, in mere matters of party regularity not involving statutory requirements, should not interfere where the question of regularity has already been determined by the superior authorities of the party. The court adopted this view, basing its decision upon the clause of the Raines election law which provides that, "if there is a division within a party, and two or more factions claim the same device or name, the Secretary of State shall decide such conflicting claim, giving preference of device and name to the convention or primary or committee thereof recognized by the regularly constituted party authorities." The court held that the State committee and State convention were unquestionably the regularly constituted party authorities, and declared that, while the opinions of lower courts upon the binding effect of this provision had been conflicting, its own opinion was that its intent was to make the decisions of the party authorities final, adding:

> "We think that in cases where questions of procedure in conventions, or the regularity of committees is involved, which are not regulated by law, but by party usages and customs, the officer called upon to determine such questions should follow the decision of the regularly constituted authorities of the party; and courts, in reviewing the determination of such officers, should in no way interfere with such determination."

Of course in New York State the "regularly constituted party authorities" are the machine and the boss. So far as the Republican party is concerned, the entire seat of power is Platt. All the committees, county and State, and the State convention do exactly what he says. "What the old man wants" is, in fact, supreme Republican law. This being the case, the decision upon the outcome of any primary or convention rests absolutely with him. What a huge joke, under such conditions, to talk of reforming the primaries! If, by good luck or accident or phenomenally hard work, the reformers were to carry a primary, all he would have to do would be to get

up another primary election, declare their primary irregular, and their work would go for naught. No system of primary reform is worth the paper it is written on in the presence of a situation like this. Whether with deliberate intent or not, the ballot law has been drawn in such a way as to protect and sustain any amount of rascality in the primaries that the "regularly constituted party authorities" may condone, and if there be any limits to their tolerance in that direction, they have yet to be disclosed. During the last campaign a Tammany leader remarked in regard to some rumors of primary revolt in that organization: "So long as we have the chairmen of the primaries we don't care a darn what anybody may try to do." That is the position in which the law places all the bosses, and the primary reformers may as well give up their fight in advance.

There is, as we have said many times, no need of attempting to reform the primaries. Leave them alone, and work against them from the outside. Nearly all the States have secret-ballot laws now which confer the privilege of nomination by petition. This is all the opponents of machine primaries need. The very act of getting signers to a petition is the first step towards an organization in the interest of better government. It leads to the personal solicitation of voters, and thus arouses them to an interest in politics, which is a most important first step. No system which can be applied to a primary will work a change of mind among the machine members of a party. They have gone into the primary because they wish to use it for their own purposes. Nothing will induce them to use it for anybody else's purposes. If they cannot use it as they wish to, they will go out of the business. The surest way to drive them out is to nominate candidates against theirs and defeat them whenever they deserve defeat. More real reform can be accomplished in that way within a few years than in a lifetime of "going into the primaries."

HOW ARE WE TO GOVERN HAWAII?

One of the objections to annexing Hawaii which Mr. Bryce mentions in his temperate and weighty article in the *Forum*, is the difficulty of our governing such a country, and especially such a population, once annexed. The point will bear elaboration. It has been entirely blinked in both the treaties—treated as a "mere matter of detail," when it is really the marrow of the whole affair. President Harrison recommended the Senate to ratify his treaty of annexation, saying that the Hawaiians, as respects the form of their subsequent government, were willing to trust "the just and benevolent intentions of the United States." Mr. McKinley, for his part, was content to leave all such puzzles to "the wisdom of Congress." But the only way we can recognize just and benevolent intentions is in some form of expression; and the wisdom of Congress we can all believe in more easily when, with Alice in Wonderland, we see it written down. Instead of dodging or deferring the question of governing the islands, it should be made the first question of all.

Now, the first thing that confronts us when we come to this "mere matter of detail" (which is, as usual, the real crux of the business), is the fact that the Hawaiian Government confesses that the inhabitants of the islands are not capable of governing themselves. This is official. In the report of the Hawaiian Senate committee, which was adopted at the same time the treaty was ratified, it was explicitly stated that "good government cannot be permanently maintained in these islands without aid or assistance from without." If this be true—and far be it from us to question an official deliverance of the Hawaiian Senate—it is, or ought to be, a fatal bar to annexation. The theory of our government, from the Ordinance of 1787 down, has been that the expansion of the United States was to be solely by the addition of self-governing communities to self-governing communities. Saying nothing now of contiguity of territory, it is safe to affirm that if, at any time within the first one hundred years of our government, a group of 100,000 people had come confessing their inability to govern themselves, and asking us to take care of them, they would have been sent about their business with scorn. They would have been told that this nation is a federation of self-governing States, and that to admit a State unable to govern itself was nonsense.

What governmental machinery have we to set up in Hawaii? Obviously only the government of a State or else of a Territory. But nobody now urges the admission of Hawaii as a State. The alternative of a Territorial government seems easy, but is it? We have a great body of special acts and general legislation affecting Territories, but it may be searched from end to end, from the Ordinance of 1787 down to the admission of Oklahoma in 1890, without finding the shadow of a warrant for any such government as the circumstances of Hawaii require. In every case the expectation has been that a local government was to be set up by universal suffrage—and that kind of government, it is confessed on all hands, cannot be set up in Hawaii. If universal suffrage were to rule there, the islands would vote against annexation itself.

It may be well to put together here some of the provisions of past Territorial legislation, to show how absolutely inapplicable they are to Hawaii, and what a complete break with our past we shall have to make if we attempt to govern that country as it must be governed when a part of the United States. Section 9 of the Ordinance of 1787 set the fashion for home rule in the Territories when it provided:

> "So soon as there shall be 5,000 free male inhabitants, of full age, in the district, upon giving proof thereof to the Governor, they shall receive authority, with time and place, to elect representatives from their counties or townships, to represent them in the general assembly."

Jumping a hundred years, we find the same expectation of ability to set up a local government on the basis of universal suffrage, in the act providing for the government of Oklahoma. Section 5 declares—

> "That all male citizens of the United States above the age of twenty-one years, and all male persons of *foreign birth* over said age who shall have, twelve months prior thereto, declared their intention to become citizens of the United States, as now required by law, who are actual residents at the time of the passage of this act, . . . shall be entitled to vote at the first election in the Territory."

Furthermore, there are, in the general provisions of the Revised Statutes of the United States respecting Territories, sections which would have to be repealed if such a government of restricted suffrage as now exists in Hawaii, and as would have to be continued, were to be made legal. Section 1859, for example, provides that

> "Every male citizen above the age of twenty-one, including persons who have legally declared their intention to become citizens in any Territory hereafter organized, and who are actual residents of such Territory at the time of the organization thereof, shall be entitled to vote at the first election in such Territory, and to hold any office therein."

Here is the spirit and the letter of our Territorial legislation, and what would happen if it were applied to Hawaii? The answer may be truthfully given in the words of that ardent annexationist, W. N. Armstrong of Honolulu, who, in explaining the present oligarchical system in Hawaii, said:

> "It must be distinctly understood that, besides ruling themselves, the whites must create a form of government through which they can rule natives, Chinese, Japanese, and Portuguese, in order to prevent being 'snowed under.' That is, we need two distinct forms of government made up into one form; one for ourselves and one for aliens, who *outnumber us.*"

Suppose the Revised Statutes of the United States were to govern the first election in the Territory of Hawaii, what would happen? Why, Mr. Armstrong and his noble band of "whites" would be "snowed under" so that they could never be dug out. Rule out the Chinese, whom our courts have held ineligible to citizenship; rule out the Japanese, though their eligibility to citizenship is yet pending in our courts; enough outnumbering "aliens," as Mr. Armstrong elegantly calls the men whose land he wishes to steal away from them, would be left to bury him in the

drifts. The Hawaiians alone would snow him under to the tune of 39,000 to 3,000; the Portuguese could do it 5 to 1; if even the British and German residents of the islands should combine, they would vote down the 3,000 Americans who are now proposing to "rule" and extinguish the rights and nationality of the other 106,000.

In the face of such patent difficulties, in the teeth of all our past and precedents, how can it be maintained that it is wise to annex Hawaii and trust to luck to govern it afterwards? An act to govern is vastly more critical than a treaty to annex. It should be made a necessary preliminary. Tell us what we are going to do with the islands after we get them, and then it will be time to talk about getting them. In default of some complete and well considered plan for governing a people which declares its inability to govern itself, annexation is worse than a leap into the dark. You may leap into the dark and perhaps alight on your feet on solid ground. But to annex Hawaii with no provision for governing it, is deliberately to leap over a precipice at the bottom of which dead men's bones are heaped high in warning.

INDIA: THE TILAK CASE.

DUBLIN, November 15, 1897.

India has been passing through an ordeal of famine and of plague. The taxation, already grinding in proportion to the resources of the people, has been further increased, at least for the present, to the amount of £125,000 a day, by frontier wars. These wars are due principally to the non-fulfilment by the present Government of promises made by their predecessors regarding the evacuation of Chitral. The British military bureaucracy that rules India entered upon the campaign lightly, in opposition to and without consulting the educated portions of the native population, who can reap none of the glory, and who, with their countrymen, are saddled with the cost. This has been a juncture when mild treatment and consideration for India and Indian sentiment would appear especially called for. The country was well inclined towards British rule. The connection after conquest has been very different from that which till a recent period subsisted between Ireland and England. Such bitter memories as complicate the Irish problem scarcely exist in India. There is no reason why they should be originated. Since the Mutiny, on the suppression of which regal promises were made of equal treatment for all nations, races, classes, and creeds, the policy has been, by establishing schools and universities, to turn Indian thought into Western channels —to teach the natives Western ideas of liberty, independence, and social duties, the lessons drawn from history, such as are taught in the schools and universities of the United Kingdom and the United States—Washington the type of a patriot, Burke as a statesman. The writings of Macaulay, of Mill, of Spencer, and of Morley are dwelt upon to a degree that they scarcely are at home.

To minds thus trained are now applied the retrograde measures of a despotic rule, exercised without any representation of the governed before the supreme authority, the Imperial Parliament.* Educated India seethes with unrest as it never did before. No outbreak is possible, no cataclysm is to be expected. But discontent will have its way in some form. The especial danger of the situation lies in this, that British will is supreme and unquestioned as it never was before. The generations that gave battle in Mahratta and Sikh warfare have passed away. No Indian is permitted to train in the military command or the statesmanship that would enable him under any circumstances to lead against British power; and the manufacture of the scientific military appliances without which men in the mass are now powerless is prohibited in India. Volunteering, which in Ireland is prohibited fairly to all alike, is in India encouraged among all whites, British and foreign, and disallowed to all Indians. What Burke most feared regarding India a century ago was the complications likely to arise from the unquestioned and uncontrolled British power there. That rule is even less questioned now than it was then, and less controlled by Parliament. Parliament was very jealous of the rule of the East India Company. It is not jealous of its own theoretical rule, which it in practice leaves to the permanent officials; and the British people are comparatively more absorbed in their own internal affairs than they were in Burke's time.

Possessing such power, drawn closer within themselves by short residence and quick communication with home, mingling less with natives, depending less and less upon the cultivation of good feeling with or respect for them, there is every danger of the Anglo-Indians urging their despotic policy still further. The miseries and disasters certain to ensue are likely to fall upon the best and most finely strung of the Indian people.

It is difficult for even the best educated European to understand the intricacies of caste customs and those connected with the home life of the people; and to what extent these may have been outraged by British soldiers in the domiciliary visits, with a view to the suppression of the plague in Poona and elsewhere, it is hard to determine. In the height of the ferment consequent on segregation work, two British officers were murdered in Poona. This evoked an outburst of indignation from leading and educated India. There was no reason to suppose that these murders were the work of other than misguided individuals. Instead of accepting the repudiation and horror expressed, the Government imposed upon the town a "punitive" police force, costing 150,000 rupees (£10,000) a year—an exorbitant sum, when we consider that the average income in India is about six dollars per annum. One hundred thousand persons are being put under suspicion and mulcted in fine for the guilt of one or two. Indignation against the murderers has been chilled and merged into indignation against the Government. There has been a general outcry from the Anglo-Indian community and the Anglo-Indian press for strong measures. The Government responded. Among those who had rendered themselves most prominent in specifying and protesting against interferences with family life and property in the plague segregation proceedings were the brothers Natu, men of education and position. They were arrested, deported, and placed in confinement. Four months have passed; neither have they been brought to trial, nor has any charge been formulated against them. Every mail from India brings news of the painful and deepening impression created by their detention.

But most of all has the Tilak case stirred the country to its depths. A report of the proceedings in a closely printed volume of 360 pages has come to hand. The guilt or innocence of Mr. Tilak is not the most important consideration. It is that a man declared guilty by British law, and sentenced to eighteen months' "rigorous" imprisonment (involving to a high-caste Brahmin degradation of which a Westerner can form no conception), has now become the most popular man in India. The 'Full and Authentic Report' is edited by two native barristers, one of them a graduate of Cambridge, England. To it is prefixed a portrait of Mr. Tilak, under which we find sentences from the writings of Charles Bradlaugh, such as, "The gaol door is no syllogism; the gaoler's key is no argument."

The Honorable Bal Gangadhar Tilak was editor of the most popular and widely circulated newspaper in the Marathi language, the *Kesari*. He is the recognized leader of the orthodox Hindu community, and for a long time has been known as one of the most honest and fearless critics of the Government. He was born in 1856, and took his degree of LL.D. in Bombay University. He early resolved to devote himself to the education of his fellow-countrymen, and never to accept Government service. He must, however, at one time have been associated in an unpaid place at a Governor's Council Board, to entitle him to the prefix of Honorable. He was mainly instrumental in the establishment of the Fergusson College in Poona, now recognized as one of the model educational institutions in the Deccan. He was professor of mathematics, and at intervals held the chairs of Sanskrit, English, and science. Later he assumed the editorship of the *Kesari*, and made it the exponent of the Hindu party, who hold that a healthy veneration of the old gods and national heroes would, under British supreme rule, best infuse a true spirit of nationality, patriotism, and self-respect into the native population. For his writings in this paper, principally in honor of Shivaji (a Mahratta chieftain who opposed the British) and in criticism of segregation proceedings, and in comparison of the British Government of India and Canada, he has been tried and sentenced under a section of the Indian penal code which reads: "Whoever by words, either spoken or intended to be read, or by signs, or by visible representation or otherwise, excites, or attempts to excite, feelings of disaffection to the Government established by law in British India, shall be punished," etc.

The judge's charge has excited considerable comment both in India and at home. Under his interpretation of the law, even helpful criticism of the Government becomes penal.

"Disaffection," said Mr. Justice Strachey in his charge, "meant hostility or ill-will of any sort towards the Government. Feelings of ill will, great or small, intense or mild, or any attempt to excite such feelings,

*The Maoris, who, within the first half of this century, practised cannibalism, are accorded of right six representatives of their own race in the New Zealand Parliament.

brought the offender within the section. It was not action, but feeling, that was the test. . . . Comments upon a measure of the Government, if they excited hatred, must also come within the meaning of the section. . . . Disapprobation, unless kept within certain bounds, became disaffection, . . . and the measures of the Government must be taken to mean everything they did or omitted to do."

The Indian Penal Code was mainly the work of Sir James Stephen. Attached to each section is an "explanation." The charge is very generally felt not to have been justified by the explanation following section 124 A already quoted:

"Such a disapprobation of the measures of the Government as is compatible with a disposition to render obedience to the lawful authority of the Government, and to support the lawful authority of the Government against unlawful attempts to subvert or resist that authority, is not disaffection. Therefore the making of comments on the measures of the Government with the intention of exciting only this species of disapprobation, is not an offence within this clause."

The prosecution relied largely upon the interpretation of passages in the *Kesari*, whose meaning was contested by the defence. Neither the judge nor the six Anglo-Indians on the jury of nine are known or believed to have had such a knowledge of Mahrati as would enable them to decide between various readings. A verdict of guilty was carried by six to three. Apart from the question of the justice of the verdict, the sentence was light, considering that twenty years' transportation to the Andamans might have been inflicted.

There is much in the teachings of Mr. Tilak that appears retrograde and cannot commend itself to enlightened friends of India. He opposed the "Raising of the Age of Consent Bill" as contrary to ancient usage and traditions. The Hindu Social Reform party holds its meetings annually in the same locality as, and on the conclusion of, the meetings of the Indian National Congress. It has been the custom of the Congress to permit the hall or "pandal" erected for its use to be occupied by the Social Reform party. Last year Mr. Tilak was mainly instrumental in breaking through this practice. He has now, however, even by those Hindus before opposed to him, come to be regarded as a national hero and martyr.

The Anglo-Indians who for generations to come are likely to rule, demand even more restrictive measures, and would if possible cripple the educational influences which India shares. Those influences cannot be checked in Europe, and, as long as intercourse with Europe continues, must extend more or less to India. Those Indians who have most participated in such influences feel most keenly the late developments, especially the Natu deportations and the Tilak prosecution. They urge that if they are to be gagged, some curb should, in its abuse and scorn of natives and native thought and feeling, be put upon the Anglo-Indian press, as much more likely to engender hatred of British rule than anything the native press can effect. It is no light matter that in a country where Europeans number less than one in a thousand of the population, a man of irreproachable character, whose whole life has been spent in the service of his countrymen, should, when speaking out fearlessly at a time when his people suffered heavy affliction, be relegated to hard labor by a jury composed mainly of Europeans. Mr. Tilak, according to the editors of the Report referred to, has "risen ten times higher in public estimation by the bold stand he took during the trial." D. B.

NOLHAC'S MARIE ANTOINETTE.

PARIS, November 17, 1897.

M. Pierre de Nolhac is the curator of the Palace of Versailles. He has applied himself to the restoration of this palace, which has become in parts much dilapidated of late years. When Louis-Philippe undertook to make of the ancient palace of the kings a sort of national museum, dedicated (such was his expression) "à toutes les gloires de la France," he found it in a deplorable state. It was not without difficulty that the architects effected the eviction of a number of families which, under one pretence or another, had installed themselves in the beautiful rooms of the palace, from the attic down.

Louis-Philippe saved the palace, but his architects made some mistakes; in their time there was not that respect for the relics of the past which has in our day become universal. M. de Nolhac has made it his object to reëstablish in all its details the old state of things, to show to us the great and small apartments, with their furniture, exactly as they were in the time of Louis XIV., Louis XV., and Louis XVI. He has succeeded, in a great degree, and he has naturally been led by his work to make a very minute study of all that concerns the royal inhabitants of the château in the past. He published a year ago a beautiful volume on Marie Antoinette, the chief interest of which lay in the reproduction of all the known portraits of the unfortunate Queen, and of a number of engravings of the time of her reign and of the Revolution. This huge volume is now, I believe, out of print, and can be had only at a premium.

M. de Nolhac gives us now a small volume which has no illustrations whatever, and in which he seems to wish to attain to the dignity of a historian. It has for its title 'Marie-Antoinette, Dauphine,' which shows at once that the author has confined himself to the years which preceded the death of Louis XVI. M. de Nolhac has used "new documents," it being impossible nowadays for an historian to present himself before the public without a suitable amount of documents. I must say at once that M. de Nolhac has not found many original documents; he has contented himself with using the correspondence of Mercy-Argenteau with Maria Theresa, published by Arneth, which remains the principal and best guide for all those who wish to study Marie Antoinette. There is also the correspondence of Mercy-Argenteau with Joseph II. and Prince Kaunitz (also published by Arneth), the collection of the letters of Marie Antoinette published by M. de la Rocheterie and M. de Beaucourt. Among the inedited documents used by M. de Nolhac, there are letters of Louis XV. and of Joseph II., letters of the King and of Madame de Villars to the Dauphin, letters of M. de Marigny, the Director of the Royal Palaces, and of the Architect Gabriel, the registers and journals of the masters of ceremonies and of the gentlemen of the bedchamber. The marriage act of Marie Antoinette has been preserved to this day in the register of the parish of Notre-Dame at Versailles. By a curious coincidence, the day of the publication of M. de Nolhac's volume there appeared in *Cosmopolis* an article on Marie Antoinette by Arvède Barine (the pseudonym of a well-known lady who often contributes to the *Revue des Deux Mondes*). While M. de Nolhac speaks only of Marie Antoinette as the Dauphine, Arvède Barine's article dwells especially on her captivity and on her death.

History has seldom shown a more extraordinary contrast than that between the infancy and youth of Marie Antoinette and her tragical end. The contrast is not only in external circumstances, in the events, in the surroundings, it is as profound in the inner life, in the character. Marie Antoinette as Austrian Archduchess, Dauphine, and young Queen, and Marie Antoinette as prisoner in the Temple and as victim of the Revolution, appear like two absolutely different persons. The contrast becomes, as it were, visible to the eye, if you put side by side the portrait painted by Drouais, just after Marie Antoinette arrived in France, now preserved in the collection at Chantilly, and the terribly realistic drawing made by David when he saw from a window the Queen conducted to the scaffold, with her hands tied behind her back, sitting straight on a wooden bench in the infamous *charrette:*

"On her arrival in France [May, 1770; Drouais's picture was painted in 1773] the Archduchess was only fourteen years old; Drouais's portrait shows her slender form, her thin arms, her face which was still the face of a child; still, the features are already those which you will find, fully developed, in the magnificent pictures of the Queen by Madame Lebrun. Her education had been much neglected; Maria Theresa had many children and was absorbed by cares of state. Marie Antoinette, when she arrived in France, was ignorant; could not spell correctly, read nothing; she knew a little Latin, but she was incapable of fixing her attention on any kind of study."

Light, gay, unreflecting, not knowing how to dissemble or to control herself, she found herself thrown in a most dangerous court, obliged to please not only her husband, but the King and the King's daughters, Mesdames, who were no longer young, such as they are represented in the famous pictures showing them in mythological costumes. Madame du Barry was the recognized favorite of the King, and her name often appears in the correspondence of Marie Antoinette with Maria Theresa.

"The King is very good to me and I love him dearly; but it is a pity to see the weakness which he has for Madame du Barry, who is the most foolish and impertinent creature possible to imagine. She played every night with us at Marly; she twice found herself next to me, but she did not speak to me, and I tried not to enter into conversation with her. However, when it became necessary, I spoke to her. . . . I wrote yesterday for the first time to the King. I was much afraid, knowing that Madame du Barry reads all the letters; but you may be sure, my dearest mother, that I will commit no fault either for or against her."

Maria Theresa always considered her daughter, even when she became Queen of France (May, 1774), as an informer and as an instrument of her own policy. In her correspondence with Mercy, her ambassador, this preoccupation is constant. Mercy is very severe in his judgments. "All depends," he writes to Maria Theresa, "on the Princess being some day willing to surmount her repugnance to any serious object." The Queen thinks only of *colifichets* (female ornaments) and of childish interests; she loves gossip, she is extravagant, inconsiderate, coquettish; she has favorites, every-

thing that a Queen has no right to have. Madame Adélaïde, one of the Queen's aunts, calls her "l'Autrichienne." In the drawing-rooms of Paris she is called "Madame Déficit." She has made a most dangerous enemy in the person of the Duke d'Orléans. There was a wave of unpopularity rising against her. In 1787, two years before the beginning of the Revolution, the Lieutenant of Police advised her not to show herself in Paris, where she would no longer be safe.

There is not much in M. de Nolhac's book which has not become familiar to those who have studied the history of the French Revolution. Whatever may be said about Marie Antoinette's levity, she does not appear unfavorably in the dangerous circumstances in which she was placed. Her instincts were good and sound; she felt a natural aversion to Madame du Barry and a natural sympathy for M. de Choiseul, who had been the instrument of her marriage, her first friend and adviser in France, and who was, besides, a partisan of the alliance between France and Austria. When Madame du Barry succeeded in obtaining from the weakness of Louis XV. the exile of Choiseul to Chanteloup, Marie Antoinette felt that the blow was directed against her as well as against Choiseul. The Duke d'Aiguillon, the successor of Choiseul, was her enemy as well as the enemy of Choiseul. Maria Theresa always considered paramount the interests of her empire; and when she forced her daughter to speak to Madame du Barry in public, at one of the great court circles, she knew that by that means she would obtain from Louis XV. an attitude of neutrality during the impending partition of Poland. It is certainly one of the most curious ironies of history that this important event, the disappearance of a monarchy which had so long served as a barrier between Germany and Russia, should have been the price of a few words addressed at court by Marie Antoinette to the courtesan who had obtained absolute power over the old King of France. "Il y a bien du monde ce soir à Versailles"—such were the words pronounced, coldly and drily, before an admiring crowd of courtiers.

Arvède Barine tries to discover a great contrast between the Dauphine and the Queen. The contrast is more, perhaps, in the events than in the person. The Queen, at her trial and in prison, certainly manifested an extraordinary amount of fortitude and of dignity; but the Dauphine never showed any meanness nor any want of courage. At a very early age left without a real friend, any disinterested adviser, with a husband who was for years indifferent to her charms and her distinction, placed in the most trying circumstances, under the eyes of open or hidden enemies, if she made a few mistakes, she never committed any grave error. At any rate, her terrible end ought to make even a Frenchman very lenient to her mistakes.

Arvède Barine, though a woman, has perhaps not felt enough this duty of forgiveness and of indulgence. She has, however, rendered full justice to the manner in which the Queen bore her misfortunes at the Temple. The old castle where the King and his family were imprisoned, built in the thirteenth century, had belonged to the Templars. It was situated between the boulevards and the Hôtel de Ville (at the last Exposition there was an exact copy of the Temple as it was during the Revolution erected near the Trocadéro; this *attraction* seemed to many to be in very bad taste). There were, when Louis XVI. was sent to the Temple, really two governments, the Assembly, which was the legal government, and the Commune, which was the government *de facto* in Paris. The royal prisoners were confided to the Commune. The Assembly meant that the prisoners should be treated respectfully and as behooved their rank; but the officers of the Commune either appropriated the money which was to be spent on the prisoners' food and clothing, or took a malicious pleasure in reducing them to the condition of the most common criminals. Authentic accounts give the sums expended (either really or nominally) for the prisoners in the months of August and September, 1793. We have also the 'Memoir of the Expenses of the Widow Capet at the Conciergerie,' the 'Account of the *fournitures* made to Louis XVI. and his family from the 10th of August to the 6th of October, 1792.' Curious details have been produced which show great discrepancies between the orders of the Assembly and the action of the Commune. Some 'Papiers du Temple' have been published by M. la Morinerie. Painful as the subject must be, it is well that every detail of the great drama of the Temple and the Conciergerie should be known. Marie Antoinette has nothing to lose by it; her end was truly heroic.

Correspondence.

PROTECTION OF FOREIGNERS.

To the Editor of The Nation:

Sir: Mr. Lee's letter telling of the duty which Prof. Darwin was obliged to pay on his planetary models brings to my mind a recent experience of my own which shows that our present intelligent tariff has been ingeniously constructed so as to protect not only our scientific men from the ruinous competition of foreigners, but foreign scientific men from the ruinous competition of Americans, according as either best serves its purpose, which is to get something out of everybody who lands in the country under the present régime. While in Munich this summer, I secured a valuable publication of plates illustrative of Greek sculpture, a work which is part of my professional apparatus, and absolutely necessary to me in the performance of my duties at our Museum. Under former tariffs I have made similar purchases while abroad, and brought them home without paying duty, upon making statements to this effect. This time, however, I was obliged to pay between sixty and seventy dollars on the work in question, because, as I was told by the custom-house authorities, while there was no doubt as to the nature of my profession or the scientific character of the plates, the new tariff would not permit me to bring it in free *unless I was a foreign scientific man emigrating to this country.* Can anybody tell me who is protected by this provision?

Very respectfully yours,

Edward Robinson.

Boston, November 27, 1897.

AN OLD ACQUAINTANCE.

To the Editor of The Nation:

Sir: I bought for this Library 'Whip and Spur,' by Col. George E. Waring, jr., Doubleday & McClure Co., 1897 (copyright 1897 by same), under the impression, first, that it was a new work, and, later, that it was a new edition, rewritten, of the same work bearing same title published by James R. Osgood & Co., Boston, in 1875 (copyright 1875 by the author). Comparison of the two books shows that, from the "contents" page to the end, they are the same, word for word, line for line, page for page. The pagination is the same. The head and tail-pieces are the same. The lines are the same length, with the same number to the page. They are evidently printed from the same plates.—I am, very respectfully yours,

Willis F. Sewall.

The Wilmington Institute Free Library, Wilmington, Del., November 26, 1897.

Notes.

The Macmillan Co. announce volume ii. in the series entitled "Periods of European History," being for the years 918-1272, by Prof. T. F. Tout of Victoria University, Manchester, and 'The Shorter Poems of John Milton,' annotated by Andrew J. George.

To their Riverside Literature Series Houghton, Mifflin & Co. purpose adding 'The Great Debate between Hayne and Webster,' edited by Lindsay Swift of the Boston Public Library.

There seems to come a time in the life of every illustrator when he feels it necessary to illustrate Dickens. Mr. C. D. Gibson has apparently reached this period, and the result is a series of half-a-dozen photogravure plates from his drawings entitled 'People of Dickens,' and published in a large portfolio by R. H. Russell. Technically the drawings are admirably done, and the process of reproduction, which allows of the use of tone as well as line, and of crayon and other tools as well as the pen, has given a new suppleness to Mr. Gibson's talent. The resultant effect is almost deceptively like etching, with its firm groundwork of line and its addition of tone by *retroussage.* One of the drawings is apparently altogether in crayon, and here the effect is more like that of fine lithography. But as illustrations? Dickens is eminently illustratable, yet no artist has succeeded in displacing the original contemporary pictures by Seymour and "Phiz" and Cruikshank, which are often feeble enough as art, but which *are* Dickens to the popular mind. Their mere priority may have something to do with this, but there is a great deal also in the fact that these artists were of Dickens's own time, and that their drawings are in the same literary and artistic atmosphere as are his writings. Their very tendency to caricature is not much greater than his—their drawings are in his style and truly illustrate him. Whatever the reason, it is certain that these men have fixed the type of Dickens's principal characters for ever, and an artist of to-day who attempts to do the work again finds himself in a dilemma. If he varies from the well-known types he will not be accepted, while if he follows them his work will seem to lack originality and spontaneity; to be a mere rehash of old material. Is not contemporaneousness of the essence of true illustration, after all, and is it not the function of the illustrator to depict his own time and his own country as a running commen-

tary upon the literary production of that time and country?

In 'London as Seen by Charles Dana Gibson' (Scribners), our artist is dealing with contemporary life, but is it London that he has seen? Here and there are bits of local color, but in much of Mr. Gibson's later work the background is almost entirely eliminated, and as to the types, they seem to us astonishingly like those that have heretofore done duty as American. We even seem to see again and again the same models with whom we have become familiar in the pages of *Life*. A few street scenes, a court scene, some notes of a "drawing-room"—these were evidently sketched upon the spot. But whether it is that modern life is everywhere much alike, or only that the artist has changed his sky but not his manner, most of these drawings look as if they might have been made in New York.

In 'All Hands' (Harpers) Mr. Zogbaum is dealing with matter with which he is thoroughly familiar, and his artistic skill, while far from being as brilliant as that of Mr. Gibson, is sufficient for the plain and honest statement of facts, so that these "pictures of life in the United States Navy" may safely be accepted as true representations. Even the pictures of battle, where fancy has necessarily been called into play, are probably pretty true to what might be, if not to what has been.

A prefatory note to Mr. F. Hopkinson Smith's 'Gondola Days' (Houghton, Mifflin & Co.) informs us that "the text is the same as that of 'Venice of To-day,'" a large illustrated subscription book published by the Henry T. Thomas Company. Mr. Smith writes pleasantly enough, in the picturesque and sentimental vein well known to readers of such books, and his text would serve well enough as a pretext for sumptuous illustration, but it is rather thin to read for itself in a portable volume with only few and slight sketches by way of pictured accompaniment.

G. P. Putnam's Sons give a fine attire to the four stories, "Puss in Boots," "Jack and the Beanstalk," "Hop-o'-My-Thumb," and "Cinderella," comprising 'The Cruikshank Fairy-Book.' The designs belong to a class in which Cruikshank's humor was thoroughly at home. Something, but not much, is lost in the facsimile of them. The artist-author's defence of his Bowdlerizing the tales is retained and is worthy of reflection; and perhaps the "few Temperance Truths" introduced in his versions will do no harm to anybody.

'Flying Leaves' (New York: E. R. Herrick & Co.) borrows its humor like its title from an otherwise unnamed source, the *Fliegende Blätter*. The legends have been adapted to this latitude when necessary. The selection is not of the best, but it is characteristic of the comic German paper.

The Cambridge Edition of Burns just issued in a single volume by Houghton, Mifflin & Co., in keeping with their Longfellow, Whittier, Lowell, Holmes, and Browning, draws by permission on the Centenary Burns of Messrs. Henley and Henderson. That is, Mr. Henley's essay on the poet is taken over entire, together with all Burns's and his editor's explanatory notes, but the variorum notes are omitted. There is a full glossarial index, one of persons and places, one of first lines, and one of titles. The volume is compact without too minute a type, and is equally desirable for reading or reference.

The half-century of Longfellow's 'Evangeline' is commemorated by the same firm in very handsome style, with quaint rubricated headpieces and full-page color plates, the first by Violet Oakley, the last by Jessie Wilcox Smith; and Miss Alice Longfellow furnishes a pleasing introduction. The decorations are of course the thing. The headpieces, in Mr. Howard Pyle's manner, light up and adorn the page not too obtrusively or fantastically. The colored plates, without pretence of antiquarian fidelity, are also well calculated to give satisfaction, as being in key with the sentiment of the poem; and we can allow what Mr. Pyle claims for his pupil, in a prefatory note, that her drawings possess both grace and beauty.

'Rome the Middle of the World' is the rather awkward title of Miss Alice Gardner's new book (Edward Arnold). It is intended for young students who have some previous acquaintance with Roman history, and the style is adapted to their comprehension. Miss Gardner's method is descriptive and dramatic rather than biographical, though the interest of each chapter centres round the representative, for the time being, of the power of Rome. The ground covered is the story of the Roman Empire from Augustus to the Medici Popes. Thus fifteen centuries rush past us in twelve chapters, and the effect is necessarily somewhat panoramic. The main figures, however, stand out clearly enough—a result which achieves the professed purpose of the book. The general effect is pleasing, and both print and paper are good. The few illustrations, excellent in themselves, are rather too archæological for the youthful mind to which the prose style appeals.

The most noticeable feature of Prof. J. B. McMaster's 'School History of the United States' (American Book Company) is the relatively large space allotted to social and economic matters. The handling of these topics has, to be sure, something of the disconnected character which has been remarked in the author's larger work, and is least successful when dealing with the period subsequent to the civil war; still, these chapters, as a whole, are valuable. Unfortunately, gain in this direction is somewhat offset by loss in another; important political movements—Jackson's controversy with the Bank of the United States, for example—being dismissed with a few brief statements, while the crooked thread of slavery is by no means clearly or adequately traced. In point of analysis and arrangement there is not a little which will commend itself to teachers; we can but think, however, that the uneven balance of parts, and the rather dry treatment of distinctly political concerns, will militate against the usefulness of the book as a text-book. The maps and illustrations are numerous, most of the latter being at once appropriate and fresh.

N. T. Bacon's translation of Cournot's 'Mathematical Principles of the Theory of Wealth,' with Dr. Irving Fisher's bibliography of mathematical economics (Macmillan), is a welcome reproduction of a work which lay almost unnoticed for half a century before its merits were generally recognized. Cournot was a mathematical writer of the first half of the century, who did little or nothing in economics but produce the book now translated, and, later, a popular exposition of its method of reasoning. Economists had not the mathematical training necessary to the full appreciation of the work, and it was so little known that even Jevons did not seem to be acquainted with it, when he brought out his work on the mathematical principles of political economy. It is naturally devoted almost entirely to those branches of the subject which admit of rigorous treatment, including the laws of supply and demand, and the influence of monopolies, taxation, and free competition upon their operations. Cournot, we believe, took a great step forward in giving precision to the statement of these operations; but the question, what real advantage is gained by the use of algebraic equations in economic reasoning, is a very difficult one in itself, and is complicated by its connection with the farther one, whether either economists or the public will accept results reached by algebraic equations which are not capable of being worked out without them. The excellent bibliography of mathematical economics is more than its title indicates, and will be most useful to every student who wishes to see the subject treated as an exact science.

The 'Colonial Laws of New York' from 1664 to the Revolution, published by the State, have recently made their appearance. This is the work of the Statutory Revision Commission, directed by the Legislature in 1891 to "republish verbatim, preserving the original spelling and punctuation," the Statutes of the colony. The laws so printed prove themselves if introduced in evidence in any legal proceeding—a wise provision, as many of the originals are missing, and all inaccessible. The work has, of course, passed through many hands (the original commissioners having in the process entirely disappeared from the scene), and has been in the special charge of Mr. Robert C. Cumming of Albany, as chief clerk. In each case the act is carefully collated with reference to previous compilations where such exist. For some reason which we are unable to state, the book bears the imprint of 1894. It is, as the Commissioners say, an "invaluable addition to the legal literature of the State." Its value to the historical student is quite as great. He has now before him, on the shelves of any good library, the complete legislative history of the State during the period that its government has been in English or American hands. This covers, omitting the slight interlude of "Schout, Burgomaster, and Schepens" in 1673-'74, the lifetime of some seven generations, or two hundred and thirty-four years. The work is preceded by an historical note written by Mr. Cumming. Want of space forbids us to linger over the curiosities of the early record. One of the first things the English did was to establish the County of Yorkshire, dividing it into Ridings. This was on Long Island; the "Duke's Laws" (the first New York Code) were promulgated at Hempstead.

The frequent inquiries made by teachers for a good book on Physical Geography make it worth while to mention Tarr's First Book on that subject (Macmillan). The chapters on the atmosphere, ocean, and lands will be found instructive by the many who wish to gain something of the modern view of the subject. Unfortunately, the book is here and there marred by carelessness of style and statement.

That most satisfactory compendium, Hann's

'Klimatologie,' has just been issued in a second and enlarged edition (Stuttgart: Engelhorn), fourteen years having elapsed since its first appearance. Besides various additions of new material, it now has abundant footnote references to sources, which were crowded out of the first edition. Unlike certain climatologies in which numerical averages constitute the stock material, we here find concise sketches of the meteorological features of many regions, and pleasant excursions from the simple generalizations concerning wind and weather into the explanations of atmospheric phenomena. On every page the reader feels the sure hand of a master for his guide.

About a year ago the first volume of a fifth edition of the 'Allgemeine Erdkunde,' by Hann, Hochstetter, and Pokorny, was published (Prag: Tempsky), treating of the earth as a globe, the atmosphere, and the oceans; this part alone of the new edition being by one of the original authors, Dr. Hann. The second volume, the 'Earth's Crust and its Forms,' by E. Brückner of Berne, is now completed, much enlarged and modernized from its predecessor. There is no work on Physical Geography to which one may turn with more satisfaction than this one, feeling sure to find the best material thoroughly treated. It is interesting to notice that under the title Erdkunde, which we commonly translate by Geography, we here find a quarter of the volume devoted to Geology, including petrography, structure, and stratigraphy. The rest of the book relates to processes that determine surface forms, and to surface forms themselves, and largely follows the scheme of presentation developed in Penck's important 'Morphologie der Erdoberfläche.'

An account of the organization of beet-sugar factories in Germany, in the Consular Reports for November, is interesting as giving an example of the successful application of the coöperative principle. Out of the 399 factories now in operation, nearly half are stock companies in which the majority of the shareholders are beet-growers. These include not only most of the largest factories, but also the most prosperous. An abstract of the 'Mexican Annual Statistician' for 1895, just published, shows the population of the Republic to be 12,578,861 and the surplus revenue nearly two million dollars (silver). There are 24 museums, 68 libraries, with 512,529 volumes; 39 scientific societies, and 454 periodical publications, including 44 dailies and 185 weeklies. From an interesting description of a visit to the great salt wells in the province of Sze-Chuen in Central China, we learn that the majority of the wells are from two to three thousand feet deep, and that the brine is evaporated by means of jets of natural gas. At one place the brine is carried five miles by a veritable pipe-line (bamboo conduits) to the boilers. The wells are said to have been in operation two thousand years.

The account of the Forestry Department of India, by Lieut.-Col. F. Bailey, in the *Scottish Geographical Magazine* for November, is interesting and suggestive. The area under control is 112,952 square miles, of which 74,271 have been set aside as permanent forest estates. The officials and rangers number about 500, the larger part of whom are natives who have been trained in the Imperial Forest School at Dehra Dun. One of their most important duties is the successful dealing with fires, which is accomplished by a system of cleared "firelines" from 25 to 100 feet wide. By this means during 1894-95 "no less than 28,913 square miles were actually saved from burning," at an average cost of "one-third of a penny per acre." For this same period the gross revenue of the state forest was "Rs. 16,788,880, and the surplus was Rs. 7,415,590." A description of Queensland, in the same number, contains some interesting statistics in regard to its mineral wealth. "At present there are altogether fifty-eight proclaimed gold-fields, besides thirty-four mining districts," and "vast areas are yet unexamined." During 1895 there were employed 10,636 miners, and the output was 631,682 ounces. The total yield up to this time has been 10,558,605 ounces, or what would make "a rectangular beam of over 14,000 feet in length by over nine inches in breadth and six in depth," equal in value to $184,775,585. The paper is illustrated by some photographs, principally of Queensland farms.

The *Geographical Journal* for November opens with a brief account of a discovery by Baron Nordenskjöld that fresh water will be found by boring through hard cystalline rock. Borings have been made in forty-four places on the Scandinavian coast from which, with moderate pumping, 125 to 500 gallons of water can be raised in an hour. Similar sites are to be found on the Mediterranean coast, Asia Minor, "and in the dry watersheds of the cañons of Colorado." Other articles are the continuation of Mr. Günther's account of the Phlegræan Fields, a description of British caves, both of which are illustrated, and the distribution of towns in England regarded in its historical aspects.

'The Chultunes of Labná, Yucatan,' are described by Edward H. Thompson in the third number of the Memoirs of the Peabody Museum of American Archæology and Ethnology, Harvard University. These subterranean chambers were originally excavated for cisterns, in the opinion of the author, though they may have been used as storehouses for grain and other food. The discovery of human remains in some of them shows that they were finally used as depositories for the dead. Figures showing the ground plans and vertical sections of the chultunes, and half-tones of some of the objects found in them, accompany this paper.

The jubilee of King Oscar II. of Sweden has been commemorated by the University of Lund in a "Festskrift," the third part of which has been recently published. It contains an account of the University, a description of its various departments, and sketches of the professors. Elof Tegnér, the Librarian of the University, is the editor and principal contributor. The book is handsomely printed, and is illustrated by views of the University buildings and an excellent photogravure of the King.

The *Publications* of the Southern History Association for October contains a twenty-seven-page bibliography of the writings of William Gilmore Simms. It is prepared by Mr. A. S. Salley, jr., a collector of first editions of almost the only ante-bellum Southern novelist who achieved a general reputation. His list gives but few and unimportant titles in addition to those included in the similar work by Prof. W. P. Trent, and its typography makes it less convenient for consultation.

The *American Annual of Photography* for 1898 (New York: Scovill & Adams Co.) is on a level with the best of its predecessors in respect to the quality and interest of its illustrations. The work of Messrs. Stieglitz and Eickemeyer maintains its high reputation, and Messrs. Worsley-Benson and John H. Gear are their worthy companions. Mr. F. H. Day's studio examples of "Photography Applied to the Undraped Figure" are exceptionally praiseworthy. The colored plates of this issue are not remarkable and betoken no progress in this direction. The *Annual* contains a large amount of useful discussion and technical information in the shape of tables, formulæ, society lists, etc.

From June 1, 1898, Mr. William J. Stillman, for many years the Italian correspondent of the London *Times*, will have a place on the pension list of that journal, and we understand that he purposes devoting himself henceforward to general literature. The date just named will mark Mr. Stillman's seventieth birthday. That his productiveness is unabated is shown by several volumes published by him or in press during the present year.

—To the Chautauqua Reading Circle literature Messrs. Flood and Vincent have added a translation, by Miss M. Wilkinson, of 'Roman Life in Pliny's Time,' by Maurice Pellison. The letters of the younger Pliny are a storehouse of facts relating to the social life of the Romans in the first century of our era, and they have always been used for its illustration. A number of the more important letters are here given in full and are connected by a running commentary. Perhaps the translation has failed to do entire justice to the manner of M. Pellison. However that may be, we are struck on every page by the unpleasant effect of a use of the rhetorical question that amounts to puerility. This may be effective enough in a lively French original, but should have been modified by the judicious translator. Probably even the Chautauqua Reading Circle could have risen to something more austere than the following: "It might truly be said that Fronto exercised an influence over the spirit and the character of the best ruler which the empire had known. Was not that a beautiful triumph for a professor of rhetoric?" (p. 31). "Have we not still retained something of this prejudice?" (p. 114). "Oh admirable rules, indeed! Quintilian forgot, alas! that virtue should be exercised even by an orator" (p. 139). We repeat that the frequent rhetorical appeal and exclamatory comment is a terrible weariness to the English reader and an insult to his intelligence. The translator's instinct for English style is far from keen. However popular the presentation—and Pellison is popular indeed—adapted to the special class to which Chautauqua appeals, it is in the interest of civilization that the best available English style should be the first essential. There is an excellent eighteenth-century translation of Pliny's Letters by Melmoth—a translation that has attained to the dignity of a classic, and of which Warton said that it had bettered the original. We are convinced that a judicious selection from this work, reprinted with little or no comment, would have brought the Chautauqua reader into far more intimate relations with the Roman life of the period than does M. Pellison. There would be fewer facts and parallels, no doubt, but a great counterbalancing gain in the deeper impression that comes of close contact with the original—more Pliny, in fact, and less Pellison. The translator has not always succeeded in adapting the French at-

mosphere to Chautauqua. M. Pellison is allowed to speak of "our country," namely, France; but later on there is put into his mouth the phrase, "$1,215,000 of our money." The illustrations are remarkably good. On p. 29 for *Sully* read *Sulla*, and on p. 178 for *Alceus* read *Alcœus*.

—The amalgamation of the Camden Society with the Royal Historical Society is now an accomplished fact; and under the latter name alone the Society, under the Presidency of Sir Mountstuart Grant Duff, with a distinguished array of thirteen vice-presidents, including Lord Acton, Rawson Gardiner, W. E. H. Lecky, and Prof. Max Müller, enters upon its new session with the promise of a number of valuable papers. For securing these contributions, the Director and Honorary Secretary, Mr. Hubert Hall, deserves most of the credit. Himself an historical student of the highest erudition, Mr. Hall is ever ready to render help to other students, whether in his private capacity or in his official. In the latter, as one of the expert staff of the Public Record Office, and the officer who presides over the Government Search Room in that institution, his help is sought by students of national or of personal history alike. To the acclaimed historian, or to the humble copyist of documents, Mr. Hall is equally helpful and courteous. It is, therefore, easy to understand how much indebted to such a man are most of the historical writers of the day. From this arises to the Historical Society much advantage, when there is a need for papers, as historical students who have anything to say are only too eager to support Mr. Hall as Director and Honorary Secretary. The President will deliver his annual address at the anniversary meeting on February 17 next. The meetings of the Society are held at the Museum of Practical Geology, in Jermyn Street. The office of the Society is at 115 St. Martin's Lane, where Mr. Thomas Mason (the Librarian at St. Martin's Town Hall) acts as Librarian and Clerk to the Society. It is open to Americans to join the Society, and some are already fellows. Indeed, that popular Bostonian and well-known historical student, Mr. Benjamin Franklin Stevens, the Dispatch Agent, in London, for the Government of the U. S. A., is not only a fellow of the Society, but also a member of its council.

—Tributes to the late Grand Duchess of Saxe-Weimar continue to appear in the German journals. We have already referred to the admirable "In Memoriam" by Erich Schmidt which graces the last volume of the *Goethe Jahrbuch*. In the November number of the *Deutsche Rundschau* Bernhard Suphan publishes the full text of the testamentary provisions made by the deceased princess with regard to the newly erected Goethe-Schiller Archives at Weimar. We learn that the building with its contents is left to the young heir apparent, Wilhelm Ernst. It is to be held as an inalienable family trust by the head of the house, and administered in such a way that its treasures shall serve the purposes of literary scholarship and shall remain in Weimar, "to the end that the city, as befits its great past, may continue to be an intellectual centre of Germany." The last issue of the *Euphorion* opens with a brief eulogy, in which the winsome character of the late Grand Duchess and her wise zeal in the cause of German letters are fittingly honored in words that evidently came from the heart. The close of the article will bear quoting: "It is not for us," writes Prof. Sauer, "to speak here of what Sophie of Saxe-Weimar was to her own noble house, to her land, to the empire. Everywhere the word holds true of her: *Unermüdet schuf sie das Nützliche, Rechte.* We confine ourselves to the praise which alone it is ours to utter, that she has done more to promote the scientific study of German poetry than was ever done before by a single individual or a learned association." Still more weighty is the commemorative address delivered on the 8th of October by Kuno Fischer in the Sophienstift at Weimar. The orator for the occasion was chosen by joint action of representatives of the German Shakspere Society, the Weimar Goethe Society, the Court Theatre, the Schiller Foundation, and the Goethe-Schiller Archives. This address, which is an excellent specimen of German commemorative oratory, is published at length in the last number of *Cosmopolis*.

—After referring to the very general sorrow occasioned by the death of the Grand Duchess Sophie—always a more eloquent tribute to the dead than any art of speech can be—Fischer proceeds to a review of her life. She was born at The Hague in 1824, being the only daughter of William II. and Anna Pavlovna. Intense loyalty to her people, an active, energetic nature, a disposition to take very seriously the obligations imposed by her station, withal an eminently practical mind and a decided aversion to sentimentalism and claptrap—this was her inheritance from her great Orange ancestry. She first saw her future husband, Karl Alexander of Saxe-Weimar, in 1834. The marriage, which occurred eight years later, was a genuine romantic love-match. As Grand Duchess of Saxe-Weimar, the Dutch princess showed that she had a heart large enough to divide with safety between the land of her birth and that of her adoption. While the Dutch called her affectionately "our Sophie," she made the Germans love her as they have loved hardly any royalty of our time. Her great wealth enabled her to give with a free hand, but she gave wisely in such ways as to encourage coöperation, independence, and public spirit. Between her and the classical poets of Germany there was from the first a bond of sympathy, for Goethe and Schiller had both dealt well by William of Orange. She could thus enter heartily into the spirit of the Weimar tradition, although, as Fischer observes (perhaps with a wink of his mind's eye), she never cared much for æsthetic theorizing or trivial babble about the poets. In this connection it is interesting to note that a half century's daily contact never established a perfect relation with the German language. To the last the right expression came more easily in French. Her first important service to letters was in connection with the founding of the German Shakspere Society in 1863. This time the initiative was not hers, but from first to last the Society has owed her much. On receiving from Walther von Goethe, in 1885, the bequest of his grandfather's manuscripts, she at once saw the possible import of the legacy and set about making it fruitful in the largest way. It is characteristic that before calling in any learned helpers, she made a careful personal inspection of the chaos in the Goethe house and began to form her plans, which then grew and grew. "Il faut agir en parlant le moins possible," she wrote about this time. This was her way. She disliked fuss and noise, especially where she herself was concerned. While she lived, no one was permitted to eulogize her if she could help it, and dutiful expressions of gratitude pleased her best if put in simple language which seemed to take her goodness as a matter of course. She might have said with Uhland: "Ich liebe nicht das laute Lieben." But now that she is gone, her many beneficiaries evidently feel that there is no longer need of reticence. Such lives as that of Sophie of Saxe-Weimar help us to comprehend why the great mass of Germans are still so very loyal to the monarchical idea.

—The wood-engraved portrait of the late Prof. Child of Harvard, executed early in the present year by Gustav Kruell, proved that this artist's hand had not lost its cunning. In richness of color, indeed, it marked an advance on anything yet produced in that series of masterpieces so devoid of mannerism and of likeness one to another. Mr. Kruell has now returned to a subject, Abraham Lincoln, which he treated many years ago in what we then thought a final and incomparable type of portrait—the type which would fix the legend. He chose then a remarkable photograph of Lincoln on the eve of assuming the Presidency, modified by careful study of the lifemask and by his own divination of character. This was the smooth-faced man of destiny. He now shows us, on quite as large a scale (the block measures 8½ inches by 11) Lincoln on the eve of his assassination, with that unbecoming beard which conceals a strong feature of his physiognomy. The face looks to the left instead of to the right. This portrait is more consonant with the popular effigies of Lincoln than its predecessor, and is likely at least to divide the suffrages of those who purchase from sentiment. Connoisseurs in the art of engraving will also be divided, but will all agree in finding in the later portrait a technical freedom and ability, and a depth of color contrast, superior to what is manifested in the earlier. In fact, it is hard to believe that the material is wood at all. We recommend those who are interested either in the man or in the art to examine both these Lincolns at F. Keppel's, 20 East Sixteenth Street, together with the two Darwins, the Webster, Grant, Sherman, and the rest of this extraordinary gallery.

—The little country of Korea, with its area of less than 90,000 square miles, is no longer officially Cho-sen, or the Land of the Morning Calm. Nor is it a kingdom, for an imperial edict, issued on the 14th of October, changed the name of the country to Dai Han, or Great Han, and the King has become an Emperor with the title of Great Emperor of Great Han. His Imperial Majesty has informed the ancestral temples of the fact, and has altered the epitaph of the late murdered queen, using the phraseology applied to an empress. He has made the titles of Queen Dowager and of the five imperial princes to correspond with their new dignities. These will have regal honors and titles which cannot be well expressed in English. The coronation ceremony took place at the thoroughly Korean hour of three o'clock in the morning, on Tuesday, October 12, upon the Round Hill near Séoul, where is the altar to Heaven. This consists

of a circular platform, having three terraces made by granite embankments, the smallest being thirty-six and the lowest or largest one hundred and forty-four feet in diameter, each floored with rectangular tiles and the whole surrounded by a granite wall. On the day previous to the assumption of the imperial crown, an afternoon parade was made to the altar. The King rode in a yellow chair, richly gilded and borne upon the shoulders of fifty or more men. The escort consisted of several regiments of soldiers, hundreds of quaintly dressed men bearing flags, wooden hammers, gilded stirrups, silvered wooden swords, and a vast array of dignified and strutting officials. The gateways and awnings were of the yellow imperial hue, and the King was dressed in a yellow robe embroidered with sun, moon, and stars and various creatures in nature and mythology. On his head was a jewelled crown, or hat, in the fashion of the Ming dynasty. The city of Séoul was decorated with flags. Amid thousands of spectators the King moved out, spending two hours in inspecting the tables and sacrificial food. The next day, leaving the palace at two o'clock in the morning, the new Emperor moved to the upper platform, where the sacrificial tables were spread to the honor of Heaven, the Round Hill being brilliantly lighted with lanterns and torches. The King bowed reverently to Heaven, while the grand master of ceremonies read the prayer composed for the occasion, and setting forth that the title of Great Emperor of Great Han was assumed in accordance with the will of Heaven and man. Various animals were then offered in sacrifice. The procession returned about five o'clock in the morning. The formal congratulations of both foreign diplomatists and the native nobles and Government officers followed in due time.

WINTHROP'S WINTHROP.

A Memoir of Robert C. Winthrop. Prepared for the Massachusetts Historical Society by Robert C. Winthrop, jr. Boston: Little, Brown & Co. 1897.

To the readers of the Proceedings of the Massachusetts Historical Society, the present Mr. Robert Charles Winthrop is chiefly known, we suspect, as a free lance of some brilliancy, who breaks the traditional repose of that learned body by occasional fearless forays. To such readers it will be a matter of surprise and pleasure to see with what self-control, courtesy, and even judicial fairness he has written the memoirs of his father. This attitude was perhaps aided by the fact that he was writing the book for his fellow-members of what the elder Winthrop used to call, with an invariable dignity that disarmed criticism, "The Society." Every such body of men comes in time to include old opponents who have mutually buried the hatchet, and it was impossible not to recognize that in this case the biographer of Winthrop had before him the biographer of Sumner. To be sure, in view of the fact that these two eminent antagonists died friends, it might seem easy enough for their mere annalists to harmonize as to the record, were it not that all experience proves it much easier to reconcile the commanders than the subordinates. The henchmen of Richard and Saladin still yearn to be cutting each other's heads off long after their respective chiefs have sat peacefully down by the same desert spring; or, to turn to a more modern instance, Mr. Parton is found fighting over the political battles of Adams and Jefferson long after those venerable men have died, so to speak, hand in hand. In the end, however, so thoroughly are mere political feuds forgotten, that the author of the book now before us testifies to having held interviews, immediately after his father's death, with three different newspaper reporters, one of whom wished to describe Mr. Winthrop as a past commander of the Grand Army of the Republic, another as the chosen co-worker of Charles Sumner, and the third as An Old Abolition War-Horse. "This," as the biographer justly remarks, "was cruellest of all" (p. 344).

The late Mr. Robert Charles Winthrop was perhaps the last survivor in New England of those statesmen who had this in common with the Southern Congressmen of their time, that they were, in Willis's phrase, "incapable of a short word or a mean action." This was accompanied, in the case of the Southerners, by a very well-defined purpose and a pugilistic disposition; but the absence of these elements in Mr. Winthrop rendered him a little inadequate to cope with the stern period in which he lived, and practically withdrew him at least from the career he loved. If it was any source of satisfaction to him that his opponents went down with him, he sometimes had it. Palfrey, a more determined man, caused the defeat of Winthrop for the Speakership of the House of Representatives, but the recoil of that bold achievement prevented the reëlection of Palfrey to the same body, and ended his public career as unequivocally as in the other case. Few of the "Conscience Whigs" whose revolt is recorded in this volume were personally much more fortunate. They were, of course, the first Mugwumps; they seemed as contemptible to all good party men as were the later Mugwumps to Senator Hoar or General B. F. Butler; yet the Conscience Whigs created the Free-Soil party which expanded into the Republican party, so that those earlier seceders gave the nation Lincoln as distinctly as their successors gave it Cleveland. Individually, as in the case of the later Mugwumps, they asked nothing for themselves; and, as a rule, they got what they asked for. At this day, Charles Allen and Stephen C. Phillips and Amasa Walker remain but the shadows of names; it was the Know-Nothings who sent Henry Wilson to the national Senate, and a coalition with the Democrats that sent Sumner.

The whole political situation at that period has been portrayed in history so laboriously, and on the whole so fairly, by the late Mr. Edward L. Pierce, in his Life of Sumner, that there was needed only a book like this, written in a similar spirit, to complete the picture and show us the other side. It shows us, that is, in the contests and perplexities of the amiable and well-meaning Winthrop, how difficult was the path of consistency for those whose aim it was to resist slavery within constitutional lines, and yet go no step further. On looking back, we can see that the only men who could act with a really free hand were the disunion abolitionists, who, having logically, at least, quitted the ship, were detached from all responsibility as to latitude and longitude. The difference between Winthrop and Horace Mann, for instance, was largely a difference of degree; the one would go so far, and the other a little further. Winthrop's once famous toast at the Faneuil Hall dinner (July 4, 1845)—called usually his "Our country, however bounded" toast, though not itself worded so tersely—appeared to the more determined anti-slavery men a crime; to the more moderate, a blunder — the alternative which Fouché thought the worst of the two. While time has not affected the question of the morality or unmorality of this act of Mr. Winthrop's, which, his biographer says, he regarded with satisfaction to the day of his death, the war showed that—North of Mason and Dixon's line—the Union sentiment, as well as the anti-slavery sentiment, had still a function to perform. It was the Union sentiment which carried the nation through the first stern period of the civil war, when not even Lincoln knew with clearness that emancipation was to be the end.

It is justly pointed out by the present biographer that Mr. Winthrop's uncertain health often made him unduly despondent in his views of public life. It was in moods of invalidism, especially, that he disapproved of Seward's "cheerful optimism" (p. 211); that he thought "the Sumner-Stevens faction . . . the most pestilent fellows in the land" (p. 267); or agreed with the Rev. Ephraim Peabody that Parker, Phillips, and Sumner taught the people to relish "nothing but the eloquence of abuse" (p. 185). It was in such a spirit that he gladly headed the Democratic electoral ticket in his own State for McClellan as President. This was not the act of a really timid man, for he knew well that the voice of his own community was against him, and he keenly felt this. To those who know the small circle which Harvard College represented in those days, it will seem no little thing when Mr. Winthrop, who had been President of the Alumni Association, was greeted with groans, for the first time in his life, on being called temporarily to the chair in 1865, by his successor, and when protests were made against his being asked to speak at the "commemoration" exercises where Lowell read his famous ode (p. 267). Mr. Winthrop had by this time changed his first unfavorable opinion of Lincoln—naturally maintaining that it was Lincoln himself who had experienced a change; but he was a strong supporter (p. 268) of the "stand against the extremists" made by President Johnson.

His political career confessedly ended in failure, yet few men pass from such failure into a later life so dignified and so useful. The moderation of temperament which had made it difficult for him to take a really controlling part, made it easy for him to maintain a most attractive habit of courtesy towards others, as when, after a severe attack upon him by George William Curtis, he wrote, in a letter (p. 258), "I don't think Curtis means to be unfair"; and when, after finding that Charles Sumner had apparently deceived him in claiming the endorsement of Buckingham, editor of the Boston *Courier*, for some statements which Buckingham had not even seen, Winthrop declined to make Buckingham's letter public, on the ground that it was probably a mere lapse of memory in Sumner (p. 56). It is to be remembered that, after Sumner's death, Whittier found no tribute to him so appreciative and satisfactory as that of Winthrop (p. 285).

It is to be remembered also that, at the Boston meeting to celebrate the fall of Richmond, Winthrop expressed only satisfaction at finding himself on the same platform with Frederick Douglass and other colored men, writing in his diary: "It was odd company for me, but I can rejoice at the success of the Union arms in any company" (p. 263). It is interesting, too, to see that the biographer, not to be outdone by his father, reports an instance where Douglass, having done in his autobiography great injustice to the elder Winthrop, and being furnished by the younger with proof that he had been mistaken, changed the whole passage in a later edition, substituting compliments. "I am particular to record this instance," writes the author of the work we are reviewing, "because I can recall no instance where any white assailant of Mr. Winthrop's behaved even half so handsomely when a mistake of fact was pointed out to him" (p. 310, note).

The younger Winthrop has certainly earned a title to such manly treatment as this, in view of the utter frankness with which he again and again—as on pp. 125, 133, 179, 199, 205, 259, etc.—goes out of his way to reprint forgotten assaults on his father, and this without note or comment, simply as a part of the background of his story. Since the famous "Refuge of Oppression" which used to be filled by Garrison with the portraits of his opponents as painted by themselves, we cannot recall a more fearless adoption of this policy. Throughout the book we fail to find those general and slashing assaults so naturally to be expected from a son upon his father's opponents. The nearest approach to this is the distaste implied in a note for "rampant and windy enthusiasts of both sexes" (p. 232)—a remark easily forgiven from the point of view even of the abolitionists of fifty years ago, whose constant effort was to keep that class of persons off their platform.

RECENT BIRD BOOKS.

Song Birds and Water Fowl. By H. E. Parkhurst. Illustrated by Louis Agassiz Fuertes. Scribners. 1897. 12mo, pp. viii, 286, pll. 18.

Bird Neighbors. By Neltje Blanchan. With Introduction by John Burroughs. New York: Doubleday & McClure Co. 1897. 4to, pp. xii, 234, pll. col'd 51.

How to Know the Shore Birds. By C. B. Cory. Boston: Little, Brown & Co. 1897. 4to, paper, pp. 89, unnumbered figs. in text.

How to Know the Ducks, Geese, and Swans. By C. B. Cory. Boston: Little, Brown & Co. 1897. 4to, paper, pp. 95, unnumbered figs. in text.

The Gallinaceous Game Birds of North America. By D. G. Elliot, F.R.S.E., etc. New York: Francis P. Harper. 1897. 8vo, pp. i-xviii, 19-220, pll. 46, and color chart.

Ornithologists who study the migration of birds know of something they call a "bird-wave," which happens at times when the migrants multiply to great excess in numbers both of species and of individuals. Something of the same sort seems to be upon us in the way of bird books, and we cannot be sure we are even yet on the crest of the wave, for there is no telling how much higher it may rise. However, we are more concerned about what to do with the deluge than with any question of *après nous*. Having repeatedly noticed books of this class within the year, five other candidates for recognition reach our desk almost simultaneously. These accessions have nothing to do with the holiday season; the extraordinary supply of such literature is due to a steady demand for popular and juvenile books which teach ornithology in an entertaining manner, "understanded of the people." No doubt such books breed their kind, by fostering the love of birds and stimulating the desire to know about them; but that does not fully explain the case. The market is not bulled; all these books sell well; the public wants them, and therefore they are. We lately referred to the phenomenal circulation of the periodical called *Birds*, with its showy, not to say gaudy, pictures; yet we doubt if its 50,000 subscribers are not overbalanced in numbers by the purchasers of such books as are on the above list, or have been lately reviewed in these columns. The publishers of 'Citizen Bird' advertised the fifth thousand within a month from date of issue last summer, and its sale is steady. Mrs. Wright's 'Birdcraft' is on the market in a new edition, embellished with over 100 full-page Fuertes plates, to replace the very poor pictures which we said would never do. Chapman's 'Bird Life' has glided quickly into its second edition, and we have seen advance sheets of a third, handsomely redressed with colored plates. Elliot's 'Shore Birds' has had like success, and we shall presently see that his above-named 'Game Birds' is on a career still more gratifying to author and publisher alike. When professional ornithologists and amateurs are trying their hands at the same business of mixing the useful with the sweet for the edification and entertainment of the public, there must be a reason for so marked a change from the times of old, when a bird book was a comparatively rare bird, something like a white crow or a black swan, to be viewed with great particularity.

We are inclined to explain the case by pointing first to the great growth of late of what may be termed the humanitarian side of ornithology—that, and the æsthetic aspects of the same subject. Audubon societies have sprung up all over the land for the sole purpose of protecting birds from wanton or useless destruction. This movement, mainly in the hands of one variety of the "new woman," has assumed the character of a crusade against the wearing of plumes for fashion's sake; and in this case sentiment, as usual, proves more potent than science. More than one author has actually presented birds in the light of fellow-citizens, with certain inalienable rights to life, liberty, and the pursuit of happiness. Such kindly feeling is heightened, and at the same time self-interest is brought into action, by the careful study now conducted by Dr. Merriam and others of the economic side of ornithology, showing how useful and even necessary birds are as a class to man. Human interest in birds is enormously strengthened and vivified when we consider them as fellow-creatures, fellow-citizens, and fellow-workers. With this comes naturally the desire to know birds better—how to tell birds apart, and learn which is which—in short, to become something of an ornithologist. Some of our best-equipped scientists have set themselves to the task of satisfying this thirst for information, and had the wit to address themselves to children of whatever age, including the laity of any age, instead of composing technical tomes for the jealous criticism of their peers. The technicists, in fine, have been called down; one seldom hears now of what may be regarded as our standard scientific treatises, which give the public what ought to be wanted instead of what is wanted. Meanwhile, the people are getting what they evidently want.

Some of our readers will remember Mr. H. E. Parkhurst's 'Birds' Calendar,' which surprised us by showing how many species could be found in Central Park, and how easily they could be studied in the midst of a great city. His present 'Song Birds and Water Fowl' will be welcome to the many friends his former book made, especially if they like easy, pleasant discourse on bird-life in desultory rather than systematic fashion. The author has his subject at heart, if not also as well in hand as some might wish; he rambles from one thing to another, like the somewhat curiously linked title of his book, as the table of contents shows with such headings as, "A Bouquet of Song Birds," "A Bird's-Eye View," and "A Colony of Herons." The book belongs to the class of those with which Wilson Flagg, John Burroughs, and Bradford Torrey have made us agreeably familiar; challenging no stern criticism, and not to be taken too seriously, but rather by every man after his own humor. The illustrations are the finest that have ever been printed in this country in black and white, with exception of the series by the same artist in 'Citizen Bird.' They are so marked a feature that Mr. Fuertes's name should have appeared upon the title-page; instead of which he is nowhere mentioned in the book. The impressions are not so brilliant as those in the other book we have cited, in which case exceptional skill was shown in "making ready" for the press, to secure the best possible results in printing pictures with the text, though the full-page inserts must have been much easier to handle in the present case. Two of the best are the stormy petrel and the cliff swallow, but all sustain the reputation which the young artist has so suddenly acquired and so well deserved.

The author of 'Bird Neighbors' conceals by only half revealing herself on the title-page. We violate no confidence in writing her name in full as Mrs. N. B. De Graff Doubleday. Her book is introduced by Mr. Burroughs, who stands sponsor for it in his own name, and whom the author makes her "clear-visioned prophet," if not also patron saint, in her graceful acknowledgments for the plan upon which her work is arranged. To come at once to the point, it is a case of "how to know" the birds one sees alive, bearing the same relation to ornithology that Mrs. Starr Dana's 'How to Know the Wild Flowers' does to botany. We imagine that 'Bird Neighbors' will achieve a like success. Its aim is to make the identification of birds afield as easy and simple as possible to the uninitiated. We confess our prejudice against all sorts of short cuts to knowledge, believing them to be the longest way round to any considerable exact knowledge; and we admit, for form's sake, that the primary grouping of birds, which occupies much of the book, is radically at fault in "classifying" by the predominant colors which first strike the eye of the untrained observer. No one knows better than the author that the wrong con-

clusions which such first impressions convey must be corrected sooner or later. Yet we are in sympathy with every attempt to popularize the study of birds; and if the first question of interest or curiosity with thousands of persons, on seeing a bird, be "What bird is that?" and be readily answerable by a book which tells us about gray birds, blue birds, yellow birds, or red birds, so much the better for the book. But to dwell on this point would be far from doing full justice to a really very meritorious performance. Mrs. Doubleday does much more than merely kodak a bird, for she proceeds fully to develop her pictures of about 150 species commonly found in the gardens, meadows, and woods about our homes; all birds of prey, game birds, and water birds being excluded. The greater part of her work is thus formally descriptive, with correct Latin as well as English names of the orders, families, genera, and species. Thus the work opens with a list of the families, under their proper orders, from *Coccyges* to *Columbæ*, with diagnoses of each and mention of their respective representatives. We would impress upon the reader the necessity of mastering this matter *first* to prevent confusion of ideas. Sections follow upon the habitats and seasons of birds, and a rough grouping according to size; after which the 150 species are fully treated, under the curious color-groups the author has had the ingenuity to devise, with description and biography of thoroughly good character, under proper technical and common names. We cannot get used all at once to the extraordinary juxtapositions which the author's plan necessitates; but that may worry others less, and need not mislead any one who, having caught his bird on the fly, and got at its name, remembers that all the birds in the book are mixed up, yet that each one is fully and fairly described for him, when once he has found out which one it is. The quarto form of the book may prove detrimental unless one wishes to use the generous margins for pencilling notes; but it is required by the size of the illustrations, of which we have yet to speak.

There are fifty-one colored plates, all from among those which have been produced by the Nature Study Publishing Company of Chicago, and have appeared in the periodical *Birds*. The results of this process of "color photography," as it is called, are striking, not to say startling. Children go into ecstasy over these extraordinary pictures; we know a little girl, six years old, whose parents had to cut out one of them because it threw the child into hysterics on sight. Some of us have eyed them askance, for various reasons of our own not unconnected with our ideas of the flashiness of cheap chromos, though it is not exactly that. As to naturalness of coloring there is no question; we have the actual coloration of the bird, and often of its surroundings, more faithfully reproduced than is usual with chromo-lithography, or even with expensive paintings from nature. The shape and posture of the bird depend entirely upon the taxidermist's previous art, as stuffed birds are set up before the camera; some are much better representations of life than others. The peculiarities of the process do not always bring the whole bird into focus, and some details are apt to be blurred; the backgrounds all have this defect, which extends in some cases to the immediate accessories of the principal figure. Perhaps these difficulties will not prove insurmountable, and, in any event, the case calls for thoughtful consideration. We have had nothing just like these pictures before; of their immense popularity there is no question. The process is of course applicable to any natural objects, and seems likely to be very extensively employed in botany and zoölogy. It occurs to us to suggest that perhaps the result would be improved by doing away with the lurid, blurry backgrounds, thus leaving the main figure in clear outline against white paper, with the fewest possible immediate accessories, all in focus. This experiment would be worth trying. No quarter-section of country is needed to show off a bird, and no hazy landscape can be added with good effect.

The shore birds and waterfowl which Mrs. Doubleday omits are shown up in two books by Charles B. Cory. This is another case of "how to know" birds—a pass-key to the mysteries of the limicoline and anatine groups. Mr. Cory makes it very easy for any one to determine the species he may have in hand, and the groups treated are two of the three that appeal most to sportsmen. His method of artificial analysis is that introduced by Coues in 1872, itself borrowed from botanical text-books. Mr. Cory sorts out the contents of his full gamebag primarily by size, as indicated by the convenient measurement of the wing from the carpal joint—so many inches in length go to such a subdivision, and so on till the right bird is reached. After being let into the books with this key, we find all the species fully described in systematic order, with curt biographies; almost all are illustrated with telling figures of heads, feet, and other details, and there are a number of full-page plates. We hardly see how birds could be made known more easily, and commend both books to the gunning fraternity especially. On reflection, we do not wonder that Mr. Cory's numerous books on birds have hardly enjoyed that recognition, and consequently that full accomplishment of their purpose, which would have been theirs had a different method of publication been adopted. Mr. Cory is no tyro—quite the reverse; his seeming amateurishness is mainly due to the virtuosity of his methods of publication.

Mr. D. G. Elliot has been wiser in this matter than his and our friend Mr. Cory. Irrespective of their merits, his books would sell to some extent on the strength of his distinguished name as a veteran ornithologist—we think now the Nestor of the group of professionals; they would sell on their merits still better; but on neither of these counts would their sale have been anything like what it has proved to be had he not trusted to a good publisher. We lately reviewed his 'Shore Birds' with unqualified approval; it has already gone to a second large edition. This is now followed by a companion volume, the 'Gallinaceous Game Birds,' with such gratifying success that it went to its second edition within a month. Each of these works, in both editions, appears in two forms, one of which is luxurious with numbered autographic copies, and the plainer style is also a remarkably well made book. The contents, text and plates alike, are the same in both, the difference being in style and quality of paper, binding, and rubrication of the title. The work seems to be still more popular than 'Shore Birds,' probably for the reason that more persons are interested in *Gallinæ* than in *Limicolæ*. We presume Mr. Elliot will not refrain from completing a trilogy on the birds that appeal most strongly to sportsmen, by giving us a third volume, uniform with the other two, on the waterfowl.

We should protract our notice of this work, had we not already said so much of 'Shore Birds' which is equally applicable to the present case; the author has changed his subject, but not his masterly method of treatment. The work has its "key" movement—what one would now hope for success without a "key" to North American birds?—but that is relegated to an appendix, and the main body of the book is a formal, systematic treatise on our partridges or quail, grouse, ptarmigan, and turkeys. Excellently well-written popular biographies, followed by sufficient technical descriptions in all cases, are given of the species and sub-species, nearly fifty in number; and forty-six of them are figured on as many full-page plates by Mr. Edwin Sheppard, of the same character as those in 'Shore Birds.' This artist's well-known style has been fixed since 1874 or earlier, and any criticism we could offer would be too late; but we like the birds themselves better than we do the surroundings in which Mr. Sheppard insists upon setting his figures. A notable new feature of 'Game Birds' is an ingeniously contrived color chart, with Newman's nomenclature, perhaps not yet so well known to ornithologists as Ridgway's, but on the whole more satisfactory, as we can depend upon identity of the various tones and tints. In his technical nomenclature and classification Mr. Elliot follows the A. O. U. Code when it suits him to do so, but not blindly, reserving his right of private judgment. There is nothing safer or better in any way for the tyro or amateur to follow, but we advise each one to do as Mr. Elliot does, as soon as he reaches a degree of proficiency in ornithology which entitles him to have opinions of his own.

Tuscan Songs. Collected, Translated, and Illustrated by Francesca Alexander. 108 photogravures from the original designs. Houghton, Mifflin & Co. 1897. Small folio.

In reproducing Miss Alexander's designs in their original size, the publishers have made a noteworthy contribution to the small number of American specimens of first-rate book-making, and, what is more, they have perpetuated a unique and in some respects precious work. Of the artistic merits of Miss Alexander's drawings we took occasion to speak some time ago, apropos of an inferior and reduced American copy; we shall, therefore, confine ourselves here to a brief reference to the work as a whole. We have called it unique, and that it surely is, for a mediæval missal, with its illuminated text and music and pictures of sacred scenes, does not more faithfully represent the spirit of worship in a bygone age than do these songs and pictures and exquisite flowers represent the spirit of the lowly in modern Tuscany. But instead of the jewel-clear colors of the illuminator, Miss Alexander uses pen and ink. Her collection of songs, taken down mostly from the lips of *contadini*, embraces the full circle of humble experience, the joys and sorrows of peasant life, its simple passions, its homely wisdom, its humor, its religion so largely interwoven

with legends, and even its monotony. These are, moreover, real songs, transmitted from generation to generation of men and women who had no books, songs that enlivened the work of the husbandmen in the field or of women at the distaff; songs that lightened the burden of bereavement; lullabies that mothers crooned to children in the cradle. In this respect they have rare value. Miss Alexander's translations faithfully reproduce their simplicity, but it could not be expected that any translator could bring over into English all the haunting melodies and the racy flavor of phrase in the Italian. The nameless balladists who invented many of these pieces had that innate artistic sense which belongs to the Tuscan people, and they sometimes attained a metrical perfection which our English verse-makers, learned in all the laws and artifices of metre, strive for in vain. Merely to preserve the spirit of these originals is a high achievement—the highest, probably, that we could expect; and this Miss Alexander has done. Take, for example, this stanza from the ballad of the Gipsy Woman, who welcomes the Holy Family to her humble home on their flight into Egypt:

> "My house, 'tis true, is poor and small,
> But I have swept and cleaned it all;
> There's fruit a plenty, ripe and fine;
> I've bread fresh baked and good new wine;
> Besides two hens, that always lay
> An egg, my lady, every day."

Here the charming naïveté of the rustic spirit is admirably rendered.

In like manner Miss Alexander has chosen for her pictures subjects which vividly illustrate the spirit of the songs. She shows us bits of Tuscan scenery or of village life, and real peasants, together with religious scenes, which fill so large a part of the Tuscan imagination. And not least characteristic are the flowers with which she has adorned the margins of the text. So that the whole is like a veritable piece of Tuscan life, perennially enchanting to any one who has known it, and delightful to every one sensitive to beauty. It was indeed fortunate that a person so sympathetic as Miss Alexander should have made this record when she did, for already the Tuscan peasants she knew have passed away. Democracy, the conscription, railways, and public schools have wrought in twenty-five years a metamorphosis greater than many a previous century had witnessed. The old customs, the picturesque dress, can now be found, if at all, only in some remote vale or crag-built hamlet. The mingled shrewdness and unsophistication of the peasantry will never again be embodied in such songs as these. The book which holds them is, therefore, a memorial.

We ought not, in conclusion, to fail to commend the excellence of the printing and make-up of this volume. The photogravures are uniformly so carefully finished as to reproduce the delicacy of lights and shades which are characteristic of Miss Alexander's treatment. If here and there a line seems faint, the cause may be due to the fading of the originals. The binding is at once elegant and simple.

English Lands, Letters, and Kings. From the Later Georges to Victoria. By Donald G. Mitchell. Scribners. 1897.

The jaded reader of manuals need not shrink from the fourth volume of Mr. Mitchell's unpretentious review of English literary history. It is free from the things that make most literary histories impossible except to those who must have their dram of reading matter; it is not schematic, nor oppressive with judicial responsibility. It is impressionistic in method, kindly in style. Criticism with Mr. Mitchell means epigram; and Arnold was of the notion that English criticism has no overplus of neat sayings. We are in a situation to be thankful for Mr. Mitchell's compression and variety and lightness of critical phrase. He may lack the grasp of Lowell, but his metaphors have much of Lowell's suggestiveness. We can overlook the fact that jerkiness has seeded into a mannerism with Mr. Mitchell. His criticism is readable, and it can be remembered.

No one will examine into these genial volumes for philosophical interpretation of periods. Nevertheless, the Taines and the Saintsburys and the Stopford Brookes needed to be supplemented by just such volumes. The chief pleasure that here awaits the general reader and the young student alike is the author's gift for distilling the very quintessence of biography. A quick survey of English writers as human beings is at least equally profitable with a view of them as exponents of French rules. That Southey had to take care of Coleridge's children is not a bad thing for a boy to know when he reads the 'Nelson' and "Kubla Khan." Lockhart's worship of rank, so manifest in all his writing, is sadly illuminated by the picture of Lockhart, a broken old man, grieving for a worthless son. A freshman's adoration for the genius of Moore will be profitably tempered by the thought of Tom neglecting his fireside for the drawing-rooms of the great, and responding with alacrity to shoulder-taps from great dowagers begging for one more song. Byron and Shelley are set honestly before the reader with something of the glamour of Missolonghi and Spezia, and something of the shame of Venice and Sécheron.

In short, we shall presently find ourselves on the point of recommending the volume as "one no school library should be without." Indeed, it contains sentences of pedagogic advice: "Macaulay is the wrong man to copy; his exaltations make an unsafe model. . . . Smallish men should beware how they copy methods which want fulness of power and the besom of enthusiasm to fill out [!] their compass." Speaking of Macaulay reminds us that Mr. Mitchell's descriptions of Macaulay, Brougham, Lady Blessington, and G. P. R. James were made from personal glimpses of these famous figures.

Relics of Primeval Life: Beginning of Life in the Dawn of Geological Time. By Sir J. William Dawson, LL.D., F.R.S., etc. F. H. Revell Co. 1897. 8vo, pp. xviii, 336, with 65 illustrations.

The researches of Dawson and Logan into the geology of the Precambrian rocks of Canada, the discovery of the problematical Eozoon, and the long-continued controversy over the question of its organic nature, form a classical chapter in geological literature. The author of the present volume was associated with the original discovery and description of this supposed earliest trace of organic life on the globe, and has since devoted much time to researches upon it, which have been made public in the form of scientific papers treating both of Eozoon and of the later discoveries which have tended to bridge the gap between the Laurentian fossil and its oldest known successors. In 1875 he endeavored to sum up in popular form what was then known, in a little volume entitled 'The Dawn of Life,' which has long been out of print. In 1893, in his 'Salient Points in the Science of the Earth,' a chapter was partly devoted to the same topic. In 1895 he delivered a course of lectures before the Lowell Institute at Boston, which was received with much interest; and the substance of these lectures is now incorporated in the volume before us, in the hope that inquiries into the Dawn of Life will prove as interesting for the general reader as hitherto for the special student, and that their presentation in this form may stimulate further investigation.

Beginning with a chapter devoted to tracing back the chain of life in geological time, a second follows with an account of life in the early Cambrian, long supposed to contain the very first traces of organisms in the geological column. Leaving behind him in this descent all the higher forms of life with which we are familiar, there still remain to the student examples of seaweeds, protozoa, zoophytes, and echinoderms of a very simple type; worms, mollusks, and crustacea, the latter group dominating; in all, more than two hundred different species are known, and the evidence is conclusive that individuals were often extremely abundant. A small chip of Cambrian limestone has afforded portions of the remains of at least fifty different animals, and when the limited area and greatly altered character of the fossiliferous Cambrian are taken into account, we cannot doubt that it was an era of abundant life in all suitable localities. The crustacea afford representatives of several well-differentiated great groups: there are both univalve and bivalve mollusks; in short, the evidence is complete that the fauna represents, not the dawn of life, but a period when the primeval organisms had already become widely differentiated. It is therefore to the Precambrian rocks that one must turn to continue the search for the earliest types of animals.

These formations are among those least known to geologists; the disturbances and alterations which they have undergone make their relative ages and arrangement most difficult to unravel, though the rocks are of great thickness and distributed over large areas. In certain beds supposed by Dawson to be Precambrian and older than the lower Cambrian "Olenellus zone," are found a few remains referred to algæ, protozoa, extremely primitive brachiopoda, and a few primitive crustaceans; the great group of trilobites being absent or represented by only a few doubtful fragments. Trails supposed to be those of worms or swimming invertebrates, fragments supposed to belong to cystidean echinoderms, and a very few minute shellfish complete the census. Below these rocks and others, of which the age is still in controversy, we finally arrive at the Laurentian system of Logan, which, with the Huronian, constitutes the great Archæan group of Dana. In its lower part this consists entirely of the stratified crystalline rock known as gneiss, more or less interbedded with dark-colored schists. This may be a part of the first-formed crust of the globe, produced under conditions incompatible with the existence of life. The upper part of the Laurentian system, known

in Canada as the Grenville series, shows evidence of ordinary marine deposition in quiet waters, and, though the beds have been greatly changed by heat and pressure, they still indicate a time of comparative quiescence intervening between the lower Laurentian and the succeeding Huronian.

This series contains (besides rocks which may have been volcanic) altered sandstones or shales, thick beds of limestone, carbonaceous strata now reduced to graphite, and large beds of iron ore. Such beds, in all succeeding formations, were produced under water, and by the accumulation of remains of plants and animals in strictly sedimentary layers. Here are found those laminated bodies which, as early as 1858, were suspected by Logan to be of organic origin, and were afterward described under the name of Eozoon. For a full account of their characters the reader must be referred to the work itself, and, whatever doubts may still be entertained, it is evident that there is a reasonable presumption in favor of the view that they represent the greatly altered fossil remains of protozoic animal life. To this point the remainder of Sir William Dawson's book is mainly directed, and it is discussed from all points of view. The general reader may derive from the information presented and the numerous illustrations a fair idea of the present status of the question, for the final settlement of which we must await further discoveries.

Essays in Liberalism. By Six Oxford Men. Cassell & Co. 1897.

If Bacon is right, the best way to find out what is going to happen in the next fifty years is to make a study of the opinions of the rising generation. This book is worth examination because it is published as a manifesto by representatives of those who are to come after us. Of the six essays it contains, one is written by a student of Christ Church, and the rest by "late scholars" of other Oxford colleges. The preface states that the writers of the essays were "drawn together" in the "political debates and the contested elections of the Oxford Union Society," and they make the interesting statement that while, six years ago, undergraduate Oxford tended to be Tory or Socialist, "since that time we have seen an extraordinarily strong Liberal movement absorb, with one or two remarkable exceptions, most of those who care for political discussions or debates."

The fact thus stated is really very significant. The reader will find that a great deal of this book is occupied with an attempt, and on the whole a very successful attempt, to show why real Liberalism can never be socialistic. On the other side (its criticism of Toryism), it is mainly old. These six young men have nothing novel to tell us about the land laws, or the House of Lords, or home rule, or privilege in general that we could not get out of the newspapers or speeches of members of Parliament. But when they distinguish between the doctrines of individualism and liberty and those of the collectivists and "new" economists and Bellamyites, we feel that we are making a step in advance. The essays on "Liberalism and Wealth," by F. W. Hirst, and on "Liberals and Labor," by J. Alsebrook Simon, are especially interesting. They are unmistakably the essays of young men, but we confess to liking them none the worse for that. Some of the points made are epigrammatic enough to be memorable, as when Mr. Hirst, contrasting the old Protectionist with the new Fair Trader, says: "They, therefore, only sinned against reason; their followers sin also against experience." The whole essay is very clever. "The organic unity of the state is one of those pretentious metaphors transferred from biology to politics which suggest one kind of unity by another and totally different kind," is a bit of criticism as neatly put as it is true. Mr. Hirst very amusingly says, speaking of the socialistic reformers who busy themselves with what they call the social problem, that "a hold on economic and political science, with a wide experience of different classes," is by them regarded "as a positive obstacle for 'The Work.' "

The authors, when they are older, may be surprised to find that they themselves have given proof in part of what they have written of the difficulty of escaping from the yoke of phrases. They are more or less victimized by the phrase "Liberal," and spend altogether too much time in attempting to explain what the real Liberal tradition means, as if in the various questions they discuss there was some hard-and-fast visible line between Liberalism and its opposite, which of course Tory advocates define as Conservatism. The fact is, that it is as impossible to define Liberalism as it is to define rationality. It is an attitude of mind, and their inquiry into the real nature of the Liberal tradition is nothing more nor less than an historical investigation into the history of a political party. The lapse in their reasoning is when they infer that they can extract from the past the conditions under which the desire for individual liberty and progress will cause men of a liberal tendency to unite in the future. The dead past will bury its dead, and the Liberal of the future will necessarily be confronted by new conditions. What we may be sure of is, that the forces which have produced what we call liberal ideas are inextinguishable, and a better proof we could not have than such a book coming from a university which, six years ago, was thought to be either Tory or Socialist in its tendencies.

History of Early Christian Literature in the first Three Centuries. By Dr. Gustav Krüger, Professor of Theology at Giessen. Translated by the Rev. Charles R. Gillett, A.M., Librarian of the Union Theological Seminary in New York. With corrections and additions by the Author. The Macmillan Co. 1897.

The long-felt want of a manual of Patristics is here in good degree met. To be sure, the two hundred and fifty pages, or so, of the original have become four hundred in the translation; but the translator has improved the book, both by enlarging and consolidating the indexes, and by adding to the list of recent authorities cited. Prof. Krüger's own contributions, we are told, have been so important as to entitle the present work to be regarded as a second edition of the 'Geschichte'; but where he is responsible for the additions, and where the credit is due to the translator, a reader is given no means of ascertaining. The acquaintance shown with English publications is so exceptional in a German that one is disposed to believe him largely indebted for it to the accomplished librarian of Union Seminary. But then the wonder is that we miss, occasionally, noteworthy information especially important for the English reader. No mention, for instance, appears to be made of Sanday on Marcion, Lightfoot on the Epistle to the Laodiceans, Watson on Cyprian, Houghton's enlarged translation of Reuss's 'Geschichte.' And one or two surprising lapses must, we fear, be scored to the account of the editor. On p. 196, in the list of translators of Origen against Celsus, the name of Christopher Persona, the Roman monk of the fifteenth century, who was superintendent of the Vatican Library and famed for his knowledge of Greek, is transformed into a treatise on the *person of Christ;* and on p. 225, a remark is added about the Ammonian sections which a glance at Gregory, Burgon, or even Scrivener, would have suppressed. These blemishes, however, do not substantially abate the value of the manual for students of early Christian literature, and as a book of reference also for the general reader.

Dr. Krüger is undoubtedly right in defending the inclusion of the Canonical writings in his account of early Christian literature. That these writings have historic connections, and stand in organic relation to literary productions, both extant and lost, is a pregnant truth of which the average clerical mind remains in sublime ignorance. The only question that can be fairly raised is, whether the author's opinions about the date and character of the New Testament writings are not over-positive. To assert that "the text of the first three Gospels can hardly have received its present shape before the second half of the second century," and that John and Paul "created a Christ of their own," can hardly fail to call out dissent in other scholarly quarters.

Before another edition of the book is issued, the section-numerals should be restored to their place in the headlines of the pages. Their removal subjects the reader to serious inconvenience.

Prof. Paul H. Hanus of Harvard:—"To men like myself the [American] *Educational Review* is a sort of working library. Its volumes stand always at my elbow."

The Dial:—"The chief organ of serious educational thought in America."

New York Times:—"The broadest and most able of the American periodicals devoted to education."

1898. FIFTEENTH VOLUME. EIGHTH YEAR commences with the January, 1898, number.

EDUCATIONAL REVIEW

Edited by PROFESSOR NICHOLAS MURRAY BUTLER of Columbia.

The Review covers higher, secondary, and primary education. Each number contains articles by leading authorities on topics of current interest, critical notes, and discussions on educational subjects, accounts of important movements in educational thought throughout the world, and results of contemporary psychological research, as far as they have an educational significance. An especial feature is *signed* reviews and notices of new educational publications, including text books.

Per year $3.00. (Monthly excepting July and August.) Per copy 35c.

The December, 1897, number, which concludes Vol. XIV, includes: Tendencies of Secondary Education, by Charles W. Eliot; Dr. E. A. Sheldon, by Lewis H. Jones; The Three-Year Undergraduate Period, by George Hempl; Child Study and School Discipline, by Will S. Monroe; English Teaching in the Lower Schools, by Agnes Crary; Sub-Freshman English, by Adams Sherman Hill and Elizabeth A. Withey; The School of Education in the University of Wisconsin, by M. V. O'Shea.

The best thought of the last seven years on educational matters is to be found in the back volumes of the Review. Vols. I-XIV (Jan. 1891–Dec. 1897, table of contents Vols. I–XIII free), bound, $37.00, unbound $27.00. Terms on such separate volumes as are not out of print, on application.

Articles for 1898 will include one on The Public School System, containing the views of leading socialists and anarchists; on The Future of the Public High School, by Prof. E. J. James of the University of Chicago; on Growth, by Dr. Franz Boas of Columbia; on Civil Service Reform and the Teaching Profession, by C. W. Bardeen; on School Buildings in New York city (illustrated) by Superintendent, C. B. J. Snyder; on Public Education *vs.* State Education, by Pres. Andrew S. Draper of the University of Illinois; on Religion in Education, by Dr. Levi Seeley; on A New Profession, by President Charles F. Thwing of Western Reserve University; on The Age at which Children leave School, by Frederick H. Law; on Fatigue in School-Children, by Dr. Smith Baker; on Education in Hawaii, by F. B. Dressler; on Student Life at Jena, by Stuart H. Rowe, etc., etc. Each number contains signed reviews of educational works.

RECOLLECTIONS OF

AUBREY DE VERE

In one vol. With Portrait. 8vo. $4.00.

Chicago Times-Herald:
"Form a most important dignified, and interesting commentary on literature and theology in England and Ireland during the present century."

James MacArthur in The Bookman:
"Immensely readable for its story of incidents, its pictures of celebrated places, and for its well-known portraits of eminent men of whom the world never tires of hearing, Aubrey de Vere's 'Recollections' merits a wide recognition. Few books of reminiscences have been published for some time which equal this one in value and interest."

A new revised and cheaper edition of the famous work:

FIRE AND SWORD IN THE SUDAN. By Slatin Pasha. Translated and edited by Colonel Wingate, C.B., Chief of the Intelligence Department, Egyptian Army. Illustrated. $2.00.

New York Tribune: "The book has been shortened to some extent for this new form, the author having excised some of the purely historical passages, but it has lost nothing of its charms through the operation. It remains one of the most thrilling and absorbing narratives of adventure in Egypt, and it is good to have it published at an accessible price."

A MEMOIR OF ANNE J. CLOUGH Principal of Newnham College, Cambridge. By her Niece, Bertha Clough. In one volume, 8vo, $3.50.

STYLE. By Walter Raleigh, Professor of English Literature at University College, Liverpool; author of "Robert Louis Stevenson." One volume. Crown 8vo. Price $1.50.

Boston Transcript: "A pure, critical pleasure; every word in this book is precious."

THE KING WITH TWO FACES. By M. E. Coleridge, author of "The Seven Sleepers of Ephesus," etc. One volume. Crown 8vo, $1.50.

"This is one of the most remarkable stories that we have read for many a day. It is very largely a history of the last years of Gustavus III. of Sweden, that strange, heroic, and pathetic figure which, touched perhaps with madness, with melancholy, and with genius, even in the days of the French Revolution flamed like a meteor in the Northern world. Into the framework of this historical tragedy is woven a singularly fine romance, told with an interest that never ceases and with a delicacy of sentiment which only great art knows."—*The Westminster Gazette.*

THE INVISIBLE MAN. (2d Edition.) By H. G. Wells, author of "The Time Machine," etc. Cloth, 12mo, $1.25.

From the November *Bookman:* "One of the shrewdest literary men in London prophesies that it will be the book of the season."

Clement K. Shorter, in the *London Bookman:* "I have not been so fascinated by a new book for many a day."

AN AFRICAN MILLIONAIRE. (2d Edition.) By Grant Allen, author of "A Woman Who Did," etc. Cloth, 12mo, Illustrated, $1.50.

From the *Pittsburgh Leader:* "A book which has the running interest of the 'Sherlock Holmes' stories."

From the *Detroit Free Press:* "There are wit, humor, and ingenuity in this story, and it runs along with an irresistible dash and spirit to the inevitable finale."

MORE BEASTS (For Worse Children.) By H. B. and R. T. B., authors of "The Bad Child's Book of Beasts." Illustrated quarto. $1.25.

The Spectator: "Mr. Bellock and Lord Basil Blackwood—the secret is, we understand, an open one—have discovered a new continent in the world of nonsense. Their second book, which sings and illustrates this New World, is to the full as original and delightful as the first. The animals are as sagacious, and the human beings as blandly self satisfied and stupid, as in 'The Bad Child's Book of Beasts.'"

A new book by the author of "Stephen Remarx."

PAUL MERCER. By Hon. Rev. James Adderley, author of "Stephen Remarx." Probable price, $1.25.

Church Times: "Father Adderley's new book exhibits all the artless sincerity, the humor, the hopeful idealism which gave to 'Stephen Remarx' its interest and charm."

JOB HILDRED: Artist and Carpenter. By Ellen F. Pinsent, author of "Jenny's Case," "No Place for Repentance," etc. 12mo, cloth, $1.25.

Phila. Public Ledger: "The story is told with such simplicity and directness, such freedom from hysterical or fine writing, that in spite of its sadness it conveys a sense of tonic, of wholesome life, of hope and not of blank despair. The pathos of the story and its unstudied charm will be felt by all readers."

NOW READY:

ROWING. By R. C. Lehmann. With chapters by Guy Nichalls and C. M. Pitman. With nearly forty full-page illustrations from photographs. Large 12mo, cloth, 360 pp. Price, $2.00.

Capt. Mahan's New Book

JUST READY

The Interest of America in Sea Power, Present and Future.

By Captain A. T. MAHAN, author of "The Influence of Sea Power upon History," "The Influence of Sea Power upon the French Revolution and Empire," "The Life of Nelson," etc. 12mo, cloth, $2 00.

Captain Mahan's new volume is a compilation of timely and important papers contributed by the distinguished author during the past three years to the principal American magazines. It will include the following articles: "The United States Looking Outward;" "Hawaii and Our Sea Power;" "The Isthmus and Our Sea Power;" "Anglo-American Alliance;" "The Future in Relation to American Naval Power;" "Preparedness for Naval War;" "A Twentieth Century Outlook;" and "Strategic Features of the Gulf of Mexico and Caribbean Sea."

Mahan's Life of Nelson

One of the Great Biographies of the World

OXFORD UNIVERSITY PRESS

American Branch, 91 and 93 Fifth Ave., New York.

LIFE AND LETTERS OF Thomas Kilby Smith,

Brevet Major-General United States Volunteers 1820 1887, by his son Walter George Smith. With portraits. 8vo, gilt top, $2.50.

General Smith entered the service in September, 1861, as Lieutenant-Colonel of the 54th Ohio Volunteer Infantry. After some months spent in recruiting and disciplining his regiment at Camp Dennison, Ohio, he reported to General Sherman at Paducah, Ky., and from that time until the summer of 1864 was in constant and active service. Absent upon sick leave until the autumn of 1864, he returned to his duties and rounded out his military career in the command of the Post and District of Mobile in the summer of 1865, subsequently receiving the rank of Brevet Major-General. After the close of the war he was Consul of the United States at Panama.

G. P. Putnam's Sons,

NEW YORK AND LONDON.

Reading Case for the Nation,

To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with *The Nation* stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, postpaid, on receipt of 75 cents.

ISABELLA BIRD BISHOP'S NEW BOOK.

KOREA AND HER NEIGHBORS.

A Narrative of Travel and an Account of the Vicissitudes and Present Condition of the Country. With 34 illustrations from photographs by the author, 2 maps, appendixes, and index. 8vo, decorated cloth, $2.00.

Mrs. Bishop resided in Korea for about a year before its invasion by the Japanese, and for over two years afterward, making frequent excursions into the neighboring states. In no part of the world is history making with greater rapidity, and the reports of such an experienced observer as Mrs. Bishop must instantly commend themselves to the student of the situation in the far East. To a larger class the work will appeal as a singularly graphic and intelligent description of an eventful itinerary, taken by one who is possessed of the very genius of travel.

THE GIST OF JAPAN

The Islands. Their People and Missions. By Rev. R. B. Ferry, A.M. *Second Edition.* Illustrated. 8vo, cloth, $1.25.

"In sixteen short and well-constructed chapters the author, rich in reading of the best authorities and in actual experience, tells of the people and their country and of Christian mission work. The tone is that of a catholic mind, and of a modest and scholarly person who is charitable and cautious."—[The Nation.

THE INVESTMENT OF INFLUENCE

By Newell Dwight Hillis, author of "A Man's Value to Society." 12mo, cloth, gilt top, $1.25.

"As a writer Dr. Hillis is eloquent and fascinating. His pages sparkle with sentences which one longs to quote. His paragraphs are teeming with metaphors and allusions, but there is not one that does not have the true ring."—[Christian Evangelist.

THE PILGRIM FATHERS

Of New England, and their Puritan Successors. By Rev. John Brown, D.D. Illustrated. 8vo, cloth, $1.50.

A new, popular edition, reduced in price.

"Scholarly, accurate, temperate, and extremely interesting."—[John Fiske.

THE CULTURE OF CHRISTIAN MANHOOD

Sunday morning at Battell Chapel, Yale University. Edited by W. H. Sallmon. With sixteen portraits and a picture of the chapel. *Second Edition.* 12mo, cloth, gilt top, $1.50.

The authors are: The Rev. Drs. Charles Cuthbert Hall, Alexander McKenzie, A. H. Bradford, D. J. Burrell, George Harris, W. R. Richards, Henry van Dyke, L. O. Brastow, T. S. Hamlin, J. H. Vincent, M. W. Stryker, G. T. Purves, J. H. Twichell, J. G. K. McClure, S. E. Herrick, and George A. Gordon.

THE MACMILLAN COMPANY'S HOLIDAY BOOKS.

ILLUSTRATED BOOKS.

The Story of Gladstone's Life.

By JUSTIN MCCARTHY, author of "A History of Our Own Times." Illustrated with numerous Portraits, Views of Places associated with Mr. Gladstone's Life, etc.

Cloth. 8vo. Price $6.00.

"As a gift-book nothing could be handsomer or more acceptable to one interested in the subject," is the verdict of the Philadelphia *Evening Telegraph* in its extended review of the work, the issue of which it had before described as "one of the most significant publishing events of the year"; "a model of the publisher's art."

It is the story of Mr. Gladstone's public life, and as *The Minneapolis Tribune* says:

"It is of the very first interest to all English-speaking peoples, because it is the biography of one of the foremost men of his time. He not only has been a great political leader and constructive statesman, but is a great personality, notable for distinction of character, intelligence and influence."

Great as is the general and widespread interest in the central character of the story, which will make the book the most widely read biography of the day, the book makes a strong appeal to many interests besides. It is full of brief clear-cut sketches of men whose political careers have brought them into association with Mr. Gladstone, either as friends or opponents, which add immensely to the interest of the whole. These could have no better qualified author than Mr. McCarthy. As the Philadelphia *Evening Telegraph* said:

"He has seen with his own eyes the greater part of Mr. Gladstone's career, has been personally and politically associated with him more or less intimately for many years, and has himself taken no small share in the events of which he gives an account."

Of scarcely less interest than these pen sketches are the illustrations described by the *Chicago Tribune:*

"Abundant and good portraits contribute to the value of what is, when all is said, a noteworthy and interesting volume of English political biography."

Old English Love Songs.
Illustrated by GEO. WHARTON EDWARDS. **Cloth, $2.00; buckram, $5.00** *net.*

Birdcraft.
By MABEL O. WRIGHT .... **$2.50** *net*

WORKS OF FICTION.

The Choir Invisible.

By JAMES LANE ALLEN, author of "Summer in Arcady," "A Kentucky Cardinal," etc., etc.

Cloth. 12mo. Price $1.50.

Mr. Allen's remarkable power of reproducing the atmosphere of the green "Wilderness" of Kentucky was never more clearly shown than in this which the Chicago *Tribune* calls the "strongest, longest, and most beautiful of Mr. Allen's novels."

There is but one verdict underlying the various reviews of Mr. Allen's book, and that is that it places him in the front rank of American novelists.

The story is of the old times when Kentucky was the frontier, and many of the incidents, the panther-fight, for example, are based on facts, which lose nothing in Mr. Allen's telling.

The Dial, Chicago, says of the book:

"There are descriptive passages so exquisitely wrought that the reader lingers over them to make them a possession forever; there are inner experiences so intensely realized that they become a part of the life of his own soul. . . . There are many other things in Mr. Allen's novel that deserve mention; such, for example, as his deep feeling for the epic of the pioneer, the historical vistas that it opens to the view, the tenderness and grace of its reflective passages, the fine idealism that is never missing from its pages."

In the Permanent Way.
By FLORA ANNIE STEEL..... **$1.50**

Corleone. A Tale of Sicily.
By F. MARION CRAWFORD. 2 vols. **$2.00**

On Many Seas.
By F. B. WILLIAMS (Herbert F. Hamblen) **$1.50**

FOR BOYS AND GIRLS.

Wild Neighbors.

Out-of-Door Studies in the United States.

By ERNEST INGERSOLL, Author of "Country Cousins," "Friends Worth Knowing," etc. Freely Illustrated.

Cloth. 12mo. Price $1.50.

The author of this charming series of sketches is well known as the writer of a number of successful books, such as "Birds' Nesting." "Knocking 'Round the Rockies," etc., of the most entertaining kind about animal life of all kinds.

Here he begins with the little gray squirrel; writes not only of the panther, the mysterious, despised coyote, badgers and other burrowers, of elephants and other animals; but also of "the service of tails"; of animal training and intelligence, and of perhaps half-a-dozen more topics, closing with "A Little Brother of the Bear," which any boy will be rejoiced to read, with only one regret—that it is the last.

The *Post* says of it:

"*This book will appeal to all who love animals.* The book is written in admirable style and with brightness and vivacity. It is in all respects a most welcome book . . . in the club, in the libraries, and among the treasures of the growing boy no less."

Yankee Ships and Yankee Sailors.
By JAMES BARNES **$1.50**

Citizen Bird.
By MABEL O. WRIGHT and Dr. ELLIOTT COUES...**$1.50** *net.*

Singing Verses for Children.
By LYDIA AVERY COONLEY.**$2.00** *net.*

POETS AND POETRY.

Alfred Lord Tennyson.

A Memoir. By His Son.

Three Editions have been sold since its first publication, in October, and a Fourth has already been issued.

Two volumes. Cloth. Medium 8vo. Price $10 net.

Attention has already been called to Mr. Mabie's extended articles on these volumes in *The Atlantic Monthly* and *The Outlook.* Many others have appeared, emphasizing not only the often repeated remark that the work is *the* biography of the year, but also Miss Jeannette Gilder's remark that

"No biography has been more eagerly awaited than this, and few, I may say with emphasis, have so entirely fulfilled such high anticipations."

The Chicago *Inter Ocean* speaks of its appearance as an event in literature as important as that of a new discovery in science, and continues:

"It is the careful work of four years. Over 40,000 letters have been sifted to make the selections given here. The proportions and balance of the various interests and tendencies of his life are admirably held, and the record is one which may well be regarded as almost an ideal standard in the literature of biography."

It has a value, moreover, beyond that of a work by any one author, however gifted, as the *Century Magazine* points out:

"and many choice spirits among Tennyson's closest friends have added their recollections and impressions with generous and loving hands. Such a book is a new and priceless gift from the spirit of one of the loveliest and purest poets who have set human speech to immortal music."

The unique position held by Lord Tennyson among the poets of this century contributes much to its success; and as the New York *Tribune* says:

"It is uniformly fascinating, so rich in anecdote and marginalia as to hold the attention with the power of a novel. In the next place, it has been put together with consummate tact."

It is written with remarkable skill, tact, and taste, it is without question the most important literary biography since Lockhart's Life of Scott, and in brief "simply indispensable."

The Nation.

NEW YORK, THURSDAY, DECEMBER 9, 1897.

The Week.

Civil-service reformers must be perfectly satisfied with the President's reference to their cause in his message. He points out that during the few months since his inauguration "the civil service has been placed upon a still firmer basis of business methods and personal merit," through careful guarding against dismissals for merely political reasons, and improvements in the methods of examination for admittance, while "a distinct advance has been made by giving a hearing before dismissal upon all cases where incompetency is charged or demand made for the removal of officials in any of the departments." Mr. McKinley suggests that some changes in the system need still to be made, and says that there are places in the classified service which ought to be exempted, but he immediately adds that "others not classified may properly be included." He announces that he will not hesitate to exempt cases which he thinks have been improperly included in the classified service, or include those which in his judgment will best promote the public service, and concludes: "The system has the approval of the people, and it will be my endeavor to uphold and extend it." This will be a sad disappointment to the Gallingers in the Senate and the Grosvenors in the House, who have been threatening to overthrow the reform. With the President of their party thus committed to its protection and extension, the spoilsmen must see that their scheme is absolutely hopeless.

One of the most noteworthy things about the President's message is a thing which is not in it. The long document contains no allusion whatever to the subject of pensions. This omission would attract remark in the case of any President. It becomes the more striking when one recalls that Mr. McKinley was himself a soldier in the Union army, and has always been a strong advocate of a generous policy regarding pensions. It is rendered still more important by the fact that, in his message to Congress at the opening of the extra session last March, the President urged that "ample revenues must be supplied, not only for the ordinary expenses of the government, but for the prompt payment of liberal pensions," etc. It is a great change from such an attitude in March to the entire ignoring of the whole pension question in December, especially when the failure to recommend a liberal policy now is accompanied by a protest against an increase of the expenses of the government, and a suggestion that "these expenses will, in my judgment, admit of a decrease in many branches of the government without injury to the public service."

Secretary Gage's plan of currency reform, as announced in his report, so far as it relates to banks and banking, endorses the principle of banknotes issued against general banking assets, instead of bonds deposited by the banks in the public treasury. He would restrict such issues, however, to one-fourth of the bank's capital, and would require that the bank should have previously taken out circulation secured in the present mode to the amount of one-half of its capital. Thus, if a bank with $100,000 capital shall have deposited $50,000 of bonds and taken out the same amount of notes, he would allow it to issue $25,000 of notes in addition upon condition of paying a tax of 2 per cent. per annum to be held in the Treasury as a safety fund to reimburse the Government, which, under the plan, is to guarantee the redemption of the notes. The Government is to have also a first lien on the assets and on the shareholders' liability as a further security. Permission to issue notes up to the par value of the deposited bonds (instead of 90 per cent.) is included in the plan, and the annual tax on secured circulation is to be reduced to one-half of 1 per cent. This is a modification of the so-called Baltimore plan, which proposes to allow banks to issue circulating notes to the extent of 50 per cent. of their capital against their general assets, on condition of their contributing a common safety fund equal to 5 per cent. of all outstanding notes, said safety fund to be applicable to the redemption of the notes of failed banks. The Baltimore plan is in its main features the same as the present Canadian system, which is itself the New York safety-fund system of 1829 with some changes and betterments, and is not surpassed by any other in the world for security, flexibility, and the general satisfaction it gives to all classes of business, agricultural, mercantile, and manufacturing.

The revenue last month, as the Treasury bulletin points out, ran short of expenditures by $8,092,483. But the sale of the Government's claim in the Union Pacific property brought a first payment from the syndicate, a fortnight ago, of $13,645,250, and this amount is cheerfully lumped in with miscellaneous revenue. It is clear that the revenue from customs under the Dingley bill is not going to be large enough to pay the appropriation for pensions alone. That is to say, all the sound and fury of the extra session, all the moving Heaven and earth to pass a tariff, all the suspense and disturbance which afflicted the business world—all this resulted in a law which will not produce enough to foot the annual pension bill alone. The remaining expenses of the government must be paid from direct taxes or by borrowing. The truth is, that the customs revenue is playing a smaller and smaller part in the nation's income. It is the internal revenue, and other forms of direct taxation, that we have to depend upon more and more. There was a gain of about $8,000,000 in the revenue from those sources in the first five months of the fiscal year. This was due to some slight increase of certain taxes and to expanding business. But the tariff, about which all the outcry was made, which was the one thing that was going to put us in funds—that, after all the changes and the long wrestling, is bringing in less revenue than ever. This is only a fulfilment of the prophecies of Secretary Carlisle and of Senator Aldrich. But the wise Dingley, the infallible Reed, the sympathetic McKinley, knew better, and are now confronting the actual figures like so many dumb dogs.

Even Mr. Dingley has at last heard of the Dingley Deficit. In what he has to say of it, he makes all "lightning calculators" look small. In the first place, there really isn't any deficit. If you only let Mr. Dingley annex some $32,000,000 of revenue received in the last months of the Wilson bill, and add in $51,000,000 more which would have been paid if the importations had been made "in the normal way" under his bill, you have at once, in place of a deficit of $46,000,000, as alleged by "the enemies of the bill" (and by the Treasury figures, too) a real surplus of $37,000,000. This paper surplus, however, Mr. Dingley admits is not available for appropriations, and so he takes to glowing prophecy about the way the receipts are going to climb by the million from now on. But at the end Mr. Dingley practically confesses that new taxes will have to be found, and talks about its being "simplicity itself" to put "another dollar upon beer." Congress did not find it so last spring; but then, it had about as much "simplicity itself" as it could stand in one session, in the person of the chairman of the ways and means committee.

A protest against the appointment of Attorney-General McKenna to the Supreme Bench has been sent to President McKinley from Portland, Oregon, signed by Judge Gilbert of the United States Circuit Court of Apeals, Judge Bellin-

ger of the United States District Court, by sundry State judges, and members of the Oregon bar. The ground of their opposition is not any specific act of Mr. McKenna, but what they conceive to be a lack of qualifications in general. Their contention is that a seat on the Supreme Bench "ought to be held only by one who in learning, intellectual ability, and determined character has shown himself to be among the few most eminent of the legal profession, and capable of executing the great trust placed upon him, and of maintaining the character for ability and independence which has made the Supreme Court of the United States one of the first, if not the very first, of the tribunals of the world." They hold that the common reputation of any man among his professional brethren is a just and sure guide to his worth; that leadership at the bar is always won by those who deserve it; that it ought always to be the prerequisite to appointment to the Supreme Court, and that it has not been won by Mr. McKenna, who, they say, "is not, either by natural gifts, acquired learning, or decision of character, qualified for any judicial place of importance, much less for the highest place in the land." Such a protest is quite unusual. It is very seldom that lawyers will expose themselves to the enmity of one who is likely to sit in judgment over them. It requires either rare courage or extreme personal resentment to account for such a movement among Mr. McKenna's professional brethren. The force of the protest depends altogether on the names of the signers, and as these are not known to us, we shall not undertake to estimate their gravity. We may remark, however, that the opinion rendered by Mr. McKenna in the interpretation of the clause of the Dingley bill which "slipped in," and which was intended to cause the Canadian Pacific Railway to "slip out" as a competitor of our own transcontinental roads, goes far to justify the signers of the protest, for if there should be much of that kind of writing in our Supreme Court reports, American jurisprudence would be in a sorry muddle.

"McKinley prosperity" has not reached the cotton-growers, and those Southern farmers who depend upon the staple exclusively are as badly off as ever, with no prospect of improvement. There is a renewal of the old attempt to secure higher prices for the crop by diminishing the acreage devoted to it, but this scheme has always failed in the past and seems no more likely to succeed in the future. The great trouble is that, while every planter thinks that it would be an excellent idea to raise less cotton and get more money for what is grown, there is a universal feeling that the other planters ought to reduce the acreage, while he has his usual crop and pockets a larger sum. The President of the American Cotton-Growers' Protective Association has called a convention at Memphis, December 20, to consider "the best procedure to meet and confront the industrial conditions that now confront us," and we observe that county conventions for the same purpose are being held in South Carolina. The aid of the Southern press is invoked, but the general feeling among the editors seems to be that nothing can be accomplished towards regulating the price of cotton by organized action on the part of the farmers. One reform, however, is within the grasp of the planter —that is, to produce on his farm what he consumes, instead of paying high prices to bring it from distant parts of the country; and the current discussion promises to strengthen a growing sentiment in favor of the general adoption of this rule.

The municipal election just held in Augusta, Ga., is of national interest for the light which it throws on political methods in the South. Augusta is a city of about 33,000 people, divided between the two races in the proportion of fifty-two whites to forty-eight blacks. Whites and blacks registered generally this year, and in about the same ratio as that of population. The whites were divided between three candidates, and it was early seen that the decision rested with the blacks. The only argument used with the blacks was bribery. Negro votes were bought, right and left; bought without any attempt at concealment. Each faction gathered its black supporters the night before the election, herded them in bull pens, wagon yards, and large halls, furnished them with all they wanted to eat and drink, marched them early to the polls, "voted them," and nonchalantly paid for their votes. The faction which had nominated ex-Senator Patrick Walsh won by a plurality of 800 over his closest rival. This victory was largely due to two points of tactics in which they outwitted the other factions. In the first place, the Walsh men led their black hosts to the polls at two o'clock in the morning, camped there, and would not let anybody else approach until they had "voted their men." In the second place, they paid their men in crisp new five-dollar greenbacks, just secured from Washington, while the others had nothing but the old, dirty, ragged paper money, which even the oldest, dirtiest, and raggedest negro despised in comparison with the fresh, new money.

Southern newspapers are commenting upon the indifference with which the Northern Republican press treats the project, now mooted in Louisiana, of practically disfranchising the great majority of the negroes by educational or property tests, after the example set by Mississippi and South Carolina. There is certainly a great difference between the present attitude of this press towards such a proposition and the sentiment manifested when the idea was broached in the constitutional convention of Mississippi seven years ago. There are various other reasons for the change, but one which comes home to most editors just now grows out of the scheme to annex Hawaii. This scheme is based upon the principle that the native Hawaiians, who are admitted to be overwhelmingly opposed to annexation, have no claim whatever to be heard in the matter, because, as the Rev. Dr. S. E. Bishop, son of a missionary and himself a missionary pastor, puts it, the Hawaiian "can no more rule than a child," and "in kindness he cannot be left to assert a right to control the vast public interests here." Every candid person admits that the native Hawaiian has as much claim to vote as the Louisiana negro. New England now confesses that the Hawaiian's claim to a share in the government under which he lives amounts to nothing. Even New England sees the absurdity of arguing that the whites have a right to suppress the suffrage of a lower race in Hawaii and have not the same right in Mississippi.

Much has been said by the press of late in favor of publishing the pension lists as a means of "spotting" men who are drawing money from the Government, to which they have no just claim. The theory is that there must be a good many cases of fraud, and that publicity of this sort would be the surest way of bringing them to light and putting an end to the abuse. This certainly seems a reasonable view to take, and probably nine people out of ten would say that the proposed scheme must operate in this way. But the Poughkeepsie *Eagle* has distinct recollections of a previous experiment along these lines that worked very differently. When the lists were printed, "severe comments were made on some of the names," but that was all. No complaints went to the Pension Office, because "no one cared to go back on a neighbor or to be the cause of bad blood in the neighborhood." Nor was this the worst of it. So far from getting unworthy names off the list, "many an old veteran, seeing names on the list of people as well off physically as himself, remarked to himself that if so-and-so received a pension, he was as well entitled, and forthwith made application." Moreover, the printed lists gave the pension agents a host of names to work for increases of pensions, so that the Government was out a large sum by the publication. The only conclusion seems to be that reform of the pension system is impossible.

Some extremely interesting information upon the character of Platt law-making is afforded in the letter of a Binghamton correspondent of the *Evening Post*. It confirms the view of the Raines ballot-law amendments which we expressed during the late campaign, namely, that they had been constructed for the purpose of making independent nominations so difficult as to be virtually impossible. So far as this city was concerned, Platt's requirement of 500 signatures for an Assembly nomination by petition, instead of being a blessing to him became a curse, for it led to the creation in nearly every district of the city of an anti-Platt organization, 500 strong, and to the nomination of so many anti-Platt candidates as to defeat all his Assembly nominees. In the country districts, as the correspondent points out, the excessive requirements for independent nominations fixed by Raines for Platt are, in many instances, in excess of the actual voting population, and hence prohibitory. They were known to be such at the time of their enactment, and Gov. Morton was requested to withhold his approval on that ground, but he declined to do so. Nobody will be surprised to learn that Platt and Raines are enemies of independent voting, and not real friends of ballot reform. The fact that they have succeeded in hampering the people in their use of the nomination by petition does not detract from that method of nomination as the most powerful weapon with which to fight the machine primary. It merely shows that the machine itself recognizes the method as an enemy which must be incapacitated if possible.

The arrogance of English labor leaders is evidently making the Government nervous. After all the negotiations, the great engineers' strike seems no nearer settlement. The employers have apparently decided to fight through to the end the question of their right to manage their own business; they are losing vast sums by the strike, but they would ultimately lose everything if they submitted to trades-union dictation in every detail of hours and wages and number of apprentices. This ominous moment has been chosen by the railway unions to threaten a strike of their own, and they confidently appealed to the President of the Board of Trade for sympathy. But Mr. Ritchie wrote them a severe letter, telling them that their position was unjustifiable, and reminding them that they were "a specially privileged body." Precisely; that is just what they thought they were. Hence their intolerable demands. How could they be blamed for thinking themselves a specially privileged body after all the Tory talk and legislation in their behalf—after Mr. Chamberlain's employers' liability bill and his renewed promise of old-age pensions? Those were special privileges, and it was only more of the same that they were asking. They may well feel hurt at Mr. Ritchie's turning again to rend them; but they should take his rebuke as only expressing the growing exasperation of the country at their overweening pretensions.

Lord Salisbury's announcement that legislation will be introduced next session breaking up London once more into small municipalities, has fallen like a thunderbolt among his followers, and they are busy as bees explaining it away, and pretending that he did not mean what he seemed to mean. In fact, it is apparently one of those "blazing indiscretions" which, according to Mr. Morley, Lord Salisbury is apt to utter nearly every time he opens his mouth in public. The creation of the London Council was the work of the Conservative Government when it was last in power, and the proposal now to abolish it or deprive it of most of its power, is nearly as great a fiasco as the confession that a Bismarck was needed to deal with the Turk. The truth is, not that the London County Council is unequal to its work or has done it badly, but that the Conservative chiefs are growing increasingly afraid of it. Even "minds like Mr. Balfour's" dread its becoming a sort of rival parliament, or commune, with distinct socialistic tendencies, so freely has it responded to several modern demands about wages and improvements. One of its worst terrors is its well-known designs on ground rents in London, which are, now that their country properties have fallen off, the mainstay of several of the great peers—in fact, it is said, of Lord Salisbury himself. There is a growing opinion in favor of taxing these on some different principle, which would greatly lessen their enormous value. Other Radical ideas have also made their way into the Council, so as to make it seem to many of the good old Tories a pestilent institution.

The Emperor's speech at the opening of the Reichstag last week was only the last of many accumulating signs that he has set his heart upon a fighting navy. The halls and committee-rooms of the Reichstag had been for some months hung with naval pictures and sketches from William's own hand. Such a thing it is for an Emperor to be a universal genius! Two great sheets, in particular, gave sketches of the English and German fleets respectively. The first, with its vast array of armored ships and cruisers, carried the legend, written in the Emperor's nervous hand, "A Fleet of the First Rank." The other, labelled "Then and Now," showed the decline in numbers of the German navy since 1886, and a long note explained how new ships must at once be built if the progress of the modern marine was at all to be kept up with by Germany. At the bottom of all stood the signature, "W. I. R., 1897," which, being interpreted, means, of course, Wilhelm Imperator Rex. No mere Kaiser König would do; something was required to go well with *sic volo, sic jubeo*, in ordering a navy, and Imperator Rex was just the thing. Then there came the petty embroilment with Hayti and the occasion for demanding an indemnity from China, both of which were seized upon by the Emperor to magnify the navy. This was the immediate comment of Radical and Clerical German papers. They saw how the tall talk to Hayti and the seizure of Kiao-Chau were intended to inflame the mind of the German people, and lead them to favor extensive naval plans. All this was confirmed fully by William himself, when he spoke, with unintentional bathos, of his devotion to the glory of the country abroad and the grandeur of the fleet being such that he had even pledged his brother, Prince Henry, to the great work. Artemus Ward laying all his wife's relations on the altar of country was a more impressive figure.

Will the Emperor get his marks and his ships voted him? Probably not even he himself expects that he will from the present Reichstag. The term of that body expires next year, when a new Reichstag must be elected, and it is doubtless to influence the elections of 1898 that all the naval parade is arranged. The present Reichstag has sullenly withstood and defeated some of William's pet plans. It voted down his law for the suppression of the right of public meeting, last May, by 207 to 53. In general, out of 397 members, the Government can count upon only about 100; the Opposition of various shades can muster something like 200 votes, while the remaining 97 vote sometimes with and sometimes against the Government. It is not denied that a majority is now bitterly opposed to granting enlarged naval credits; and the probability is strong, therefore, that the Emperor will have to wait at least till 1898 to get his naval toys. If a foreign war should supervene, the whole situation might change in a day; but if Germany continues at peace, the likelihood is as we say. As for the prospect of getting a more docile Reichstag next year, it cannot be said to be flattering. The political tide has been running against the Government since 1893. In bye-elections since that date they have lost eleven seats in the Reichstag—four being captured by the Radical Progressives, and three by the Social Democrats. If affairs remain as they are, it would seem certain that a programme of extravagant naval expenditure would result only in a majority, of radical and socialistic tendency, in the next Reichstag against the Emperor.

THE PRESIDENT'S MESSAGE.

President McKinley's message is mainly concerned with three questions, viz., Currency reform, Cuba, and Hawaiian annexation. The relative importance of these three is indicated by the order in which they are treated. Currency reform comes first. It is important, he says, to make the demand obligations of the Government less onerous, and to relieve our financial laws from ambiguity and doubt. These demand obligations amount to $900,000,000, consisting of various kinds of fiduciary circulation. They are all good, because the Government's pledge has been given to keep them good, but, he prudently adds, "the guarantee of our purpose to keep the pledge will be best shown by advancing toward its fulfilment." As the first step in this advance, he makes the following recommendation:

"I earnestly recommend, as soon as the receipts of the Government are quite sufficient to pay all the expenses of the Government, that, when any of the United States notes are presented for redemption in gold and are redeemed in gold, such notes shall be kept and set apart and only paid out in exchange for gold."

As this proposal has been recently and pretty fully commented on in our columns, we may pass over it now with a single remark. The President recognizes the fact that a surplus revenue is necessary to carry this measure into effect. The Government is now living in part on the proceeds of bond issues made by the Cleveland Administration. Those borrowings may last some time longer, but the end will come. Unless the revenues rise to the measure of expenditures, the bottom of the chest will be found, and then not only will currency reform be impossible, but the public will become alarmed again and will rush, long before the bottom is reached, to draw out gold while the supply lasts. It is only needful to remark on this point that when Congress takes up this question, the question of the deficit must be considered at the same time.

This measure of currency reform is a homœopathic dose, but it is important, nevertheless, since, if it were passed and a surplus revenue were secured, it would keep the currency equal to gold as long as the Bryanites were kept out of office, but no longer. No measure of reform can be considered adequate which leaves the basis of all values the sport of caucuses, conventions, and biennial or quadrennial elections. Secretary Gage's plan of currency reform is commended to the careful consideration of Congress, but is not specifically endorsed, except in three or four minor points, to which the President adds one of his own, namely, that if Congress shall approve of the previous recommendations of the message, then it shall provide that the national banks be required to redeem their notes in gold. That is not a bad idea, nor would the banks object to it, since it would be quite easy for them to send in their greenbacks and get the gold with which to redeem their notes. The advantage of this proviso would be that it would push greenbacks into the Treasury, where, in case the President's first recommendation is carried into effect, they will be held fast till gold is deposited to take them out.

The Cuban question is considered at great length, and upon the whole in a satisfactory manner. The present Government of Spain is treated with marked deference; its plan for Cuban autonomy is commended. The terms offered by Spain to the island, as transmitted by cable by Minister Woodford, are recited. They are substantially the same as the rights enjoyed by Canada. The fiscal provisions embrace the right to frame the insular budget, both as to expenditure and revenues, without limitation of any kind, and to set apart the revenues to meet the Cuban share of the national budget, which latter will be voted by the national Cortes with the assistance of Cuban Senators and Deputies; to initiate or take part in the negotiations of the national Government for commercial treaties which may affect Cuban interests; to accept or reject commercial treaties which the national Government may have concluded without the participation of the Cuban Government; to frame the colonial tariff, acting in accord with the peninsula Government in scheduling articles of mutual commerce between the mother country and the colonies. There is, perhaps, some room for discord touching the last of these provisions.

When Congress was in session a few months ago, a joint resolution granting belligerent rights to the Cuban rebels had passed our frisky Senate and had been deposited under the cushion of Speaker Reed's chair. President McKinley deals with this subject in an admirable manner, showing in no offensive way that the granting of belligerent rights is not a legislative, but an executive proceeding; that its exercise depends upon facts which can be ascertained only by the Executive, and that the granting of belligerency would not change the status of the rebels, except for the worse, since it would give Spain the right of search on the high seas, even up to the margin of our territorial waters. The impressive words used by Gen. Grant in a message to Congress on a similar occasion are quoted at length and approved. Indeed, the granting of belligerent rights to the Cuban rebels is discountenanced in every possible way. The upshot of the whole Cuban matter is that we ought to help the Cubans to gain autonomy, but not to commit any breach of the law of nations, and that, "if it shall hereafter appear to be a duty imposed by our obligations to ourselves, to civilization and humanity, to intervene with force, it shall be without fault on our part, and only because the necessity for such action will be so clear as to command the support and approval of the civilized world." If the latter condition is fulfilled, not even Spain will have room for complaint. The message, indeed, can hardly fail to have a strong influence in Spain and Cuba, as well as in the United States, and we cannot doubt that the influence will be beneficial.

The question of Hawaiian annexation is rather lightly touched upon. The President thinks that "every consideration of dignity and honor" requires that the treaty of annexation be ratified, but he does not say how the dignity of any individual Senator would be promoted by turning around as suddenly as the President himself did in reference to this question. He is in favor of extending "the most just provisions for self-rule in local matters, with the largest political liberties as an integral part of our nation" to the Hawaiians, but he means by Hawaiians only the handful of men who constitute the present Government, and their supporters, for he immediately refers to them as those who have governed themselves five years and "have come of their own free will to merge their own destinies in our body politic." It is generally supposed that not more than 3,500 of the inhabitants of the islands have "come of their own free will," and it cannot be said that the extension of provisions for self-rule to that number would be a very large grant of popular rights.

The subject of international bimetallism forms one of the minor topics of the message, but the President does not hold out any expectation that the ends of the Wolcott Commission will be gained. He says that "they believe" so and so. He does not say that he shares their beliefs, but he endorses their ability and fitness to deal with the subject, and bows them out with his blessing.

"JAMMING THROUGH."

One of the most serious signs of our time is undoubtedly the growing disinclination to discuss important public measures, either on the platform or in the press. Public men avoid nearly every species of oratory except indefinite praise of their own party and vague abuse of the other. What my party does is surely right—what the other party does is surely wrong—is the burden of every speech. So it is with the press. Things are right not because they are right, but because our party has proposed them; therefore, we are relieved from the necessity of giving any other reasons. The art of debate is thus falling into disuse among all classes of the community except college undergraduates, who are now making a gallant effort to revive the traditions of better days. Of course, politicians eagerly avail themselves of this

public sufferance. Knowing that no discussion will be looked for, they concoct all sorts of schemes privately, put the party stamp upon them in some hotel parlor, and then produce them as measures sanctioned by the party caucus, and therefore "sure to pass." The first thing the public hears about them is that they are Republican or Democratic measures, and must be swallowed. Any objections which may be raised are sure to come from two classes—the opposite party and the Mugwumps. As a matter of course, under the rules of party warfare, no attention is paid to what the other party says, and to pay attention to what the Mugwumps say would be a sign of unusual weakness, indicating a want of virility and courage. In this way all need for discussion is got rid of. Everybody whose opinion is cared for approves, and the others may go to Jericho.

Two striking examples of the results of this system are now before our eyes —the creation of Croker's "Greater New York" and the Hawaii annexation. The Greater New York was created on exactly this system. It was concocted in private, without any popular demand, and passed quickly without a word of debate. All objections from whatever quarter were left unanswered, all criticisms left unnoticed. The result was probably the greatest disgrace that has ever befallen a civilized community—the delivery of a great city, with all its offices and revenues, by the votes of a majority of its own citizens, to be disposed of almost absolutely by an ignorant man who can barely write his name. Worse calamities have befallen many cities, but their conqueror came in through a breach, over the dead bodies of their bravest men.

The Hawaiian annexation is another example. The important feature in this is not the mere seizure of some small islands. It is the entrance on an entirely new policy which the occurrence marks. For one hundred years it has been the boast of this republic that it had not owed any of its territory to conquest, that every man on its soil lived under majority rule, and that no man's allegiance could be transferred, or political duty created, except by the votes of his fellow-citizens. Herein lay our proudest distinction from the Old World. In the case of Hawaii we propose to depart from this policy. We began by helping a band of "sons of missionaries" to seize an island by a sort of "confidence operation," that is, by getting the local government to believe a lie. We then made a desperate effort to secure the "swag" by preventing the injured parties from getting to Washington until we had stored our plunder in a United States warehouse. When the scheme was temporarily defeated by President Cleveland's sense of honor, we did not go to work to win public opinion over to the enterprise by any of the ordinary instruments of Republican persuasion—that is, by a propaganda by tongue or pen. We simply lay low. We buried the subject in silence and obscurity. The country ought to have rung with it, so important is it to the future of our government. But what we did was to get the Republican party into power in order to save us from free silver and Bryanism; not in order to pass a high tariff and coin silver along with foreign nations at 15½ to 1, and to annex Hawaii. As soon as we got it into power, the party promptly passed a high tariff, sent emissaries abroad to get foreigners to join us in 15½-to-1 silver coinage, and prepared to annex Hawaii, having done nothing whatever to reform the currency, or even proposed a plan about it.

The annexation is now, we are informed, ready for execution. It is "sure to pass." It will be "jammed through." There has been no discussion of it. There is no need of any. No objections to it have been or will be noticed. The grotesque part of it is that the solitary defence of it which has come to our notice comes from an American missionary in Hawaii, in last week's *Independent*. His arguments, considering their source—a preacher of righteousness sent abroad to evangelize the Hawaiians—are decidedly droll. He is seventy years old, the son of a missionary, and a missionary himself for sixteen years. He and his father have drawn money from the New England Christians for their support for half a century, and, probably, all this time have been sending home glowing reports of their work, to be read at missionary meetings. The result, according to himself, is that the monarchy, twenty years ago, from being "generous and high-minded," began to "show despotic and heathenish tendencies," and "perverted the ways of the people." In 1893 it "hopelessly succumbed," under the guns of a United States man-of-war and the fraudulent representation of the United States Minister, and "the weaker race were displaced from control" by "the band of excellent men" now "in charge." There are, he says, two reasons for annexation, viz., "the need of a commercial and military key of the North Pacific," and again the need of protection for a "noble American and European colony," and a resplendent "American civilization," now menaced by the Japanese.

He acknowledges that there is a demand for a "plébiscite" and that the "question of annexation be submitted to a vote of the Hawaiian people." Why is this not done? First, because the "general public interest" (that is, the interest of the American missionaries who are making money in the island) "denies to the native Hawaiians any exclusive right to determine the national destiny of the island," seeing how useful the island is as a "commercial and military key," and how thoroughly the white colony is stamping out leprosy. Secondly, because the Hawaiians are a declining race, while the wicked Portuguese are "prolific" and multiplying, in indifference to American plans, and will eventually, if not stopped, overcome the natives, to say nothing of the immigration of the Japanese. Thirdly, because of the want of "foresight" on the part of the Hawaiians. Fourthly, because "the question is one too broad and far-reaching for the mass of the people to vote on with any intelligence."

We have never seen the justification of conquest and despotism stated with more childlike simplicity. It is exactly what Napoleon would have said to any of his subjects if he had taken the trouble to give them reasons for enslaving them. But coming from a missionary, and the son of an American missionary, it has a sweet reasonableness which a rude soldier could never give it. But we never read these missionary sophistries without recalling Wendell Phillips's trumpet call in Faneuil Hall, sixty years ago, when he invoked Divine vengeance on a Boston doughface who was dealing out similar pagan sophistries in defence of similar abuse of power.

THE PASSING OF THE HIGHLANDERS.

The Highland regiments raised in the British service after 1745 were probably, except Cromwell's Ironsides, the best troops it has ever had. They were men trained to fighting from their youth, and had a devotion to leaders which knew no bounds. Their valor under Wolfe, at Quebec, in the Peninsula, and at New Orleans, and, though last, not least, Walter Scott's novels, made their once hated costume both picturesque and romantic. They became the pets of the British army, and the public admiration undoubtedly did much to keep up their morale. Lowland Scotchmen got to be proud of wearing the kilt, and, in fact, the whole Scotch people became Highlanders, to whom it was natural to go with bare legs and carry their money in a "sporran." But the real Highlanders began to disappear slowly from the ranks as soon as, in the thirties, they began to disappear from the Highlands. The great clearances made by the landlords in order to introduce sheep farms sent to America thousands of the hardy men of the "black-houses" in the glens, who used to enlist, as the Irish enlisted, as an escape from poverty. When the sheep-farms gave way to "deer-forests" and grouse-moors, the same process continued, but latterly the people emigrated more willingly. It is almost literally true that there are no Highlanders in the Highlands to-day. One meets gamekeepers in the deserted glens who re-

monstrate with you for frightening the deer, and "gillies" who load and clean the guns for Manchester men and Americans, who hire the moors. One sees tailors and butchers and the like who go round the country in the summer to the various "gatherings of the clans" which take place for the amusement of the English visitors, and dance the sword dance and throw the hammer and the stone to make a little money; but there are no more Highlanders.

Of course this has had its effect on recruiting. There are now, for this reason, no Highlanders in the British army, and there are comparatively few Lowland Scotchmen. The recruiting sergeant picks up a few boys about Edinburgh and Stirling Castle, but the stalwart battalions who fought at New Orleans and in the Crimea, and followed Havelock and Colin Campbell in India, are seen no more. In fact, the Scotch have ceased to enlist, for the simple reason that they can do better. Scotchmen generally are too prosperous and industrious and canny, and emigrate too easily, to take "the Queen's shilling." The famous Highland regiments are now made up mainly of Englishmen and Irishmen, and consequently are really a kind of picturesque and harmless imposture. Some years ago it came out, through a debate in Parliament, that one of the most famous, the "Cameronians," which was originally raised on the estates of Cameron of Lochiel, and whose gathering rose "wild and high," as Byron said, at Waterloo, had hardly any Scotchmen in it. Its ranks were filled with East Londoners, and the Secretary of War condoled with the Colonel over having to lead a regiment of cockneys disguised as mountaineers.

But the continued seizure by Scotland of the glory won by these regiments in the field to-day, was sure to make trouble between the nationalities before long, and there seems just now to be an outbreak of it. It was hard for the Irish and Englishmen who fought in kilts, to have Scotchmen getting drunk over their fame, so there has been a revolt. Lord William Beresford, a fighting Irishman of the navy, has gone down armed with suspicions to the War Office, and discovered that the "Gordon Highlanders" who stormed the heights of Dargal and set the Scotch bugles blowing, were mainly Irishmen, and that even the famous piper who piped the "Cock of the North" after being shot through both legs, was an Irishman named Findlater, and said, "Arrah, be aisy," instead of "Hoot, mon."

The wonder is the Irish have not complained sooner, for in military as in other matters they have not been used by the English with fairness or wisdom. Had they been allowed after the Union, as the Scotch were, to enlist in some uniform that seemed national and was green, and to have a harp on the regimental colors, they would doubtless have been tickled to death, for they are not a serious people. But, down to last year, soldiers were punished for putting a shamrock in their hats on Patrick's Day. So for nearly a hundred years they have gone on fighting all over the world for English and Scotch credit. There were two or three distinctively Irish regiments in the service, the Royal Irish Fusiliers, and the Enniskillen Dragoons, and the Connaught Rangers, but they were in no way different from English regiments in dress or standards, and yet Wellington acknowledged in the House of Lords, that, had England not had Ireland for a recruiting ground, she could not have carried on the Peninsular war. Forty thousand Irishmen are said to have served in it, and a few years after the Union the Connaught Rangers overthrew the French Guard in the streets of Fuentes de Onoro.

Probably everybody in the British empire knows that Marlborough was an Englishman and Lord Clyde a Scotchman, but how many know that Wellington was an Irishman, and that Lord Roberts and Lord Wolseley are also Irishmen? The achievements of these men and of others like them go to English or Scotch account, while to the Irish is left the glory of killing landlords and cutting off cows' tails. It is largely in these small things that Irish misgovernment consists. It has been made a crime and disgrace for the Irish to be national, while in the Scotch it has been encouraged, and the result is Irish hatred and alienation. The notion that it can all be cured by a visit from the Duke of York and Mr. Balfour is part of the same huge mistake which has made Irish history such a chapter of woe. Of course, the differences between the two peoples have been great. There were the differences of religion and race to begin with, and then there was the difference of temperament, which made an Irishman like O'Connell odious to an Englishman like Cobden; but what shall we say was the reason which made Tennyson consider O'Connell a villain, without ever having seen him, so that he had to be sorry and make amends afterwards, when he knew him?

WORK FOR ATHLETES.

We have often wondered what becomes, after graduation, of all the heroic virtues which the ruder athletics are said to develop in college men. That admirable self-denial, that stern self-control, that utter sinking of the individual in devotion to the good of the whole—personal ambition ruled entirely out, and the glory of the college put first—upon what do all these noble qualities expend themselves after undergraduate days are over, after the last goal is kicked, the last run scored, the boat's nose shoved in front for the last time? Are they visible in our politics? Do they tone up our society, our manners? Does a true athletic restraint and sobriety mark our newspaper press? We are not scouting the existence of the athlete's special virtues, but we do say that they are too precious to be allowed to evaporate and disappear the moment after taking a degree.

If they do seem to escape us after that critical event, if we do not find our public life sweetened and our social conditions ameliorated as we should expect them to be by the advent every year into active life of hundreds of football players, all dripping with the noblest virtues known to man—or, at least, to man in college—the inference must be either that those virtues have not really existed in the degree supposed, or that their possessors have not seen what a field for their continuous exercise the world offers. We are content, for to-day, to embrace the second alternative. Grant the virtues, in number and intensity, as great as the calmest college president with a champion team may allege; how strange the blindness which prevents these young heroes from seeing the opportunities for a man's work which life offers them on every side.

We are the more inclined to dwell upon this aspect of the matter because it is so easy to recall more than one example of splendid athletes who have done splendid work as men. Their cases give some color, it must be confessed, to the argument that the stuff in a boy which leads him to delight in the rougher and harder forms of athletic competition is the very stuff which, in a man, fits him to endure hardship as a good soldier of religion or of civilization. English instances readily occur. There was the famous George Augustus Selwyn, Bishop of New Zealand. Both at Eton and Cambridge he was noted for his athletic prowess as he was for his scholarship; and he afterwards, in his voyages and hardships among the Pacific islands, displayed the same qualities of courage and versatility and energy which had made his reputation with bat and oar. Coming nearer to our own times, the renowned Cambridge cricketers, the Studd brothers, have, since leaving the university, won even greater renown by their tireless labors for the good of their fellow-men, in connection with the Inland Mission in China and in reform educational work among London's outcasts. The career of such men gives at least plausibility to the reasoning which says that the enthusiasm of the athletes' temperament is easily set on fire by the appeal of philanthropy.

We cannot, perhaps, match the Selwyns and the Studds with American rivals, though we certainly call to mind more than one hero of the football field or the baseball diamond of our colleges who has not been content to go on being

known as an athlete that was, or a "coach." One of the finest football players Princeton ever had, the Rev. Hector Cowan, is now, we believe, on the rush-line of Christian missions in darkest Africa. But there is much other work that has been done and is doing by young men which seems to us peculiarly fitted to appeal to an athletic nature. Take the experience which Mr. Jacob Riis has undergone in this city, in order to make himself the authority that he is on the problems of New York's poor. Mr. Riis has no record as a college athlete that we ever heard of, but he was shown the qualities of persistence and endurance, physical and moral, and self-denial which, it is said, athletics tend to produce. Then there is the very remarkable work done by Mr. Walter A. Wyckoff of Princeton, some of the results of which he has been giving in *Scribner's Magazine*, and has just now published in book form—'The Workers.' We do not imagine that Mr. Wyckoff ever stood high in the athletic world; but he went about his task of finding out from the inside what the life of a workingman really is, in a spirit that no athlete could surpass. He stood and worked beside ditchers, and farm-hands, and porters, and day laborers, and loggers, not getting, perhaps, as gloriously scarred and bruised and tired as a football player, but making a pretty fair show in the flesh, in that line, after all. And his results, while possibly not of the highest value, must yet, as sociological studies, leave the work of the closet sociologist far behind.

Our point is that the world is fairly aching for the kind of chivalrous, dashing workers that the college athletes are represented to be; and that they ought to be advised that the opportunity for a glorious career does not terminate with the close of their college life. If they like being thrown into the mud, let them get into the reeking ditch with Mr. Wyckoff. They can find plenty of dirt to nestle in and to fight, and they can have it all their life long, instead of simply for four fleeting years. If they think it so fine a thing to have an opposing eleven heaped upon them, and are stirred to a noble glow by the determination to shake them all off and get up to the goal-line at last, what delight they would take in political campaigning, with an 80,000 Tammany majority on their backs, and four years of fighting before it can be flung off!

Everywhere, in fact, difficult work to be done challenges the fine enthusiasm of young manhood. The more arduous it is, the more compelling its appeal. Prince Kropotkin, himself an example of what he speaks of, tells of the renunciation, from time to time, of wealth and rank by young men and women in Russia, that they may cast in their lot with what they believe to be the cause of light and freedom. Not exactly that cause, but causes which ought as strongly to stir a chivalrous soul, we have in abundance in this country. If our college athletes want to stop every mouth, and to convince all the world that everything that is asserted of their being in training in all manly virtue is true, let them make haste, after graduation, to show that they are as willing to suffer and be strong in the defence of humanity and morals as they ever were in defence of a goal.

AN ALLEGED SPECIE CIRCULAR OF 1827.

BRUNSWICK, ME., November 23, 1897.

By the famous "specie circular" of July 11, 1836, the receivers of public money were instructed to receive, after the 15th of August following, in payment for lands, "nothing except what is directed by the existing laws, viz., gold and silver, and, in the proper cases, Virginia land scrip." In discussing this circular, Professor W. G. Sumner, in his 'Life of Jackson' (p. 336), says, "A similar circular was issued in Adams's administration, which has hardly been noticed," and cites as a reference the 'Memoirs' of John Quincy Adams, vol. vii., p. 427. A similar statement, with the same reference, occurs in Schouler's 'History of the United States' (vol. iv., p. 262, note). The passage in Adams's 'Memoirs,' on which both of these writers appear to rely, is under date of February 8, 1828, and reads as follows:

"Mr. Rush [Secretary of the Treasury] brought me some papers from Alabama—a message from the Governor (Murphy) to the Legislature of the State, and a remonstrance from the Legislature addressed to Congress against an instruction from the Treasury Department to the Receivers of Public Moneys, at the Land Offices, dated last August, directing them to receive in payment for lands only specie, bills of the Bank of the United States or its branches, or bills of specie-paying banks of the State. The remonstrance of the Legislature is in language little short of frantic—a blustering, bullying style, which many of the State Governors and Governments adopt towards the General Administration, as if they considered insolence as their only means of demonstrating their sovereignty.

"Mr. Rush proposed some modification of the instructions, to remove any possible inconvenience to the purchasers. He is himself of a temper so mild and a deportment so courteous that the bitter invective, slanderous imputations, and reproachful malignity of this Alabama manifesto were quite distressing to him. I showed him a letter from a man in prison at New York, for some debt to the United States, addressed to me, which I had just received, written in much the same insulting style, and I told him I prized them both at about the same value."

I have not succeeded in finding a printed copy of the instruction referred to above. It does not appear to be in the Congressional documents, nor is it mentioned in Poore's 'Catalogue,' or in the annual reports of the Treasury and the General Land Office. Of the general histories and biographies treating of the period, I have found none, except those of Professor Sumner and Mr. Schouler, already cited, that allude to the matter. The debates in Congress in 1836-'37, on the bill to annul the specie circular, apparently make no mention of a "similar circular" of 1827, although at this point my examination has not been exhaustive. Yet it seems not unlikely that if, nine years before Jackson put forth his destructive edict, a "similar" order had been issued by the Treasury Department, the fact would have been used as a precedent by the friends and supporters of the Administration, if not by Jackson himself.

For a copy of the order referred to by Adams I am indebted to Mr. O. L. Spaulding, Assistant Secretary of the Treasury. Whether or not the order was printed, I am unable to say, the copy furnished me being in manuscript. The circular bears date August 22, 1827, and is supplementary to a circular of February 22, 1826. Of this latter, no copy of which appears to be in the Congressional documents, a manuscript copy was also kindly furnished me by Mr. Spaulding, and a printed copy, differing in minor details from the other, was placed at my disposal by the Commissioner of the General Land Office. The circular of 1826 is too long to reproduce here, but the following extract gives all that is relevant to the present purpose:

"In addition to specie, and the bills of the Bank of the United States and its branches, which are receivable in all payments to the United States, the moneys receivable for Public Lands are as follows: [then follows a list of the places from which the notes of incorporated banks therein, in addition to those banks of the State or Territory in which the land office is situated, will be received].

"But this permission to receive the notes of local or State banks is only to be in force provided those State banks pay specie for their notes on demand, and are otherwise in good credit.

"For the information of purchasers of Public Lands, each Receiver will publish in one newspaper in his district a list of the description of funds which he is hereby authorized to receive; and he will give notice, in like manner, of any change which may occasionally take place. But, in all such publications, he will state that, although for the accommodation of purchasers, the local or State bank notes therein enumerated are at present receivable, it is desirable that payments be made in specie, or the notes of the bank of the United States or its branches; and that, as the receipt of any of the local or State banks may be discontinued at any time without previous notice, it will be well for those who have payments to make, to provide themselves with specie, or notes of the United States bank or its branches. . . ."

The circular of August 22, 1827, is as follows:

"It has been found advisable, for various considerations, so far to carry into effect an intimation given in my instruction of the 22d February, 1826, as to discontinue the receipt, at any land office, of the notes of any local or State bank not established or existing in the State or Territory where the land office is situated. But that those who intend to purchase public land may have ample time to prepare for this change, it will not go into operation until the 1st of January, 1828.

"On the receipt of this instruction, the receivers of public moneys will give the necessary notice in one of the newspapers in their districts, and will continue it once a week until the change takes place. The notice should be accompanied with the caution mentioned in the instruction before referred to, that purchasers of Public lands may provide themselves with specie or notes of the bank of the United States or its branches.

"In continuing to receive the notes of banks in the State or Territory in which their land-office is situated, the receivers will conform particularly to the instruction already mentioned, in guarding against the receipt of the notes of any banks that do not pay in specie on demand, or that are not in undoubted good credit; and as the receivers have means, which this department, from its remoteness, has not, of judging of the character and condition of the banks in their State or Territory, full confidence is entertained that they will use all

necessary vigilance in preventing the receipt of any notes by which loss may happen to the United States."

A comparison of this Treasury order of 1827 and the specie circular of 1836 shows, as it seems to me, few points of real resemblance. The order of 1827 restricted the payments for lands to specie, notes of the Bank of the United States or its branches, and notes of specie-paying banks in the State or Territory in which the land-office was situated. The circular of 1836 restricted such payments to gold and silver, and, in certain cases, Virginia land scrip, this last not a resource of great importance. The circular of 1827 put a stop to the reception of the notes of local banks outside of the State or Territory in which the land-office was located. The circular of 1836 forbade the reception of the notes of any bank, wherever situated. The fact that persons having payments to make are urged to provide themselves with specie does not seem essentially to alter the character or import of the earlier order; notes of the Bank of the United States were declared equally acceptable. I am inclined to think, accordingly, that the two circulars can be said to be "similar" only by a very free use of the term. Indeed, the words of Adams's own entry in his diary seem to suggest quite plainly an order radically different from that issued at Jackson's direction.

It would be interesting to know more of the remonstrance of the Alabama Legislature, of which Adams speaks. From his account of it, it must have been a lurid document. A somewhat extended search, however, has failed to discover the text of the resolution or any allusion to such a communication. Alabama was much exercised, during this period, over the condition of the public-land business in the State, and a number of memorials, of various sorts, were presented to Congress, and are printed in the Congressional documents, and in the "Public Lands" series of the 'American State Papers'; but none of them, so far as I have found, answers to Adams's description, or refers to the Treasury circular of 1827. The journals of the House and Senate do not seem to contain a record of the presentation of such a memorial. Whether or not the document is in the archives of Alabama, I do not know. A further order, however, supplementary to those of February 22, 1826, and August 22, 1827, was issued February 22, 1828, in which, after reciting the paragraphs directing the receivers to give notice of the kinds of funds receivable in payments for lands, and urging payment in specie or notes of the Bank of the United States, the following modification was directed to be made:

"But, in all such publications, he [the receiver] will state that, although for the accommodation of purchasers, the local or State banknotes therein enumerated are at present receivable, the receipt of any such notes may be discontinued at any time, if, in the opinion of the receiver, they cannot be safely received."

The above paragraph is from a copy of the circular furnished me by the Commissioner of the General Land Office. It suggests the reflection that, if the circular of 1828 proved acceptable to Alabama, the excitement of the State was pretty easily allayed.

WILLIAM MACDONALD.

THE FOREIGN POLICY OF ENGLAND.

LONDON, November 23, 1897.

That the foreign policy of Lord Salisbury is a failure has long been evident to those who have had facilities for looking into the details of the proceedings of the Foreign Office. It has been said for more than a year, to my certain knowledge, by some of the most strenuous supporters of the Government, that Lord Salisbury was incompetent to direct the conduct of foreign affairs, and that his continuance in the direction was a menace of disaster. That he has lost nerve and grown timid and hesitating is of common knowledge, but the history of his actual tenure of the Foreign Office shows it (in full knowledge of the difficulties and advantages of the situation) to have been one of the weakest which the recent annals of English government afford. What must be said in his defence, however, is that the late Government, by its fruitless attempts to arrive at a good understanding with France, and its perpetual and weak concessions to French assumptions, had so gravely compromised the position that Salisbury had little ground to stand on for the preparation of his defence.

The pressure of public opinion on account of the Armenian massacres brought a momentary energy into the decisions of the Foreign Office, and the first act of the Minister was to reëstablish the old accord between England, Italy, and Austria, originally made in 1888, when Crispi and Salisbury were in power, for common action in the Turkish Empire. Italy accepted the renewal of the programme of action eagerly, as Crispi's ambition had always been to bring Italy into a definite alliance with England; but Austria, bound by the agreement and unable to refuse, still accepted with reluctance, arising from the fact that she was not prepared for the raising of the Eastern question, which would have been the inevitable consequence of the actuation of Salisbury's programme. There was, too, in official circles, the further reason for reluctance in the feeling that it was rather for the Austrian Government to take the initiative in a question that lay at its borders than for the English, so far away and animated only by sentimental considerations, which to the Eastern Powers were of so little weight. However, Austria yielded, even if reluctantly, and the programme of the new triple alliance was in substance adopted, as was shown by the immediate and effective pressure on the Sultan to accord the long-promised reforms under penalty of forcing the Dardanelles and presenting the united squadrons before Constantinople. An immediate movement would have met with no real opposition. The fortifications at the Dardanelles were not in a state of defence, though a slight delay would have permitted them to be made so, and Russia was not ready for a movement, while there had been no understanding between Russia and France. The Italian Government had, before renewing the accord of 1888 with England, consulted the Emperor of Germany as to accepting the English proposition to renew, and had received the most emphatic approval, the Emperor giving to King Humbert his imperial word of honor that, whatever might be the consequences of the step, he would back Italy to the last man, practically putting England at the head of a quadruple alliance, and making her the arbiter of the settlement of the Eastern question.

In consequence of this disposition, Crispi ordered the fleet to Smyrna in support of the English, and mobilized a corps d'armée for debarkation in Asia Minor in support of any operations necessary in the Dardanelles or beyond, and the Austrian fleet was prepared for such operation as might have followed, though the naval force brought on the field of action by England and Italy combined was irresistible by any possible opposing force. Certainly at this moment the raising of the Venezuela question by the United States was a grave embarrassment for Salisbury—not, as we supposed, from any fear of the United States, for England even alone has never shown fear of any combination, but because the event of a war between the United States and England is regarded by a large and influential portion of English people as such a disaster to civilization that only the gravest necessity should drive England into it. With the support of Italy, Austria, and Germany, who would have necessarily been England's allies in the case of any aggression by the United States, England had nothing to fear in the long run, except from English sentiment; and in spite of the momentary check caused by the attention of the Foreign Office being absorbed by the Venezuela question, nothing prevented Salisbury from solving the question at Constantinople in a short, vigorous campaign, concluded before the American diversion could have come to a head.

At this juncture, however, the French Government intervened with solicitations for postponement, in view of a combined action of all the Powers, with an apparently amicable pressure which Salisbury was not strong enough to resist; and the naturally to be anticipated long discussions began, with interminable delays, with preparations and final intervention on the part of Russia, and the ulterior consequence of a secret treaty between the Tsar and the Sultan, which gave the former the effectual protectorate of the Turkish empire. The position now became impregnable, except in the event of a general war, for which Salisbury had not the nerve nor England the desire. The opportunity was lost, but, what was much worse, the opportunty for future coöperation of Germany with England was also lost. The contingent consequences of the weakness of Lord Salisbury were soon felt in two directions. The German Emperor, exasperated at the way in which Salisbury had trifled with and betrayed the Triple Alliance in its representatives, Italy and Austria, especially the former, became hostile to England, and, to atone for having abandoned Russian interests, became their most strenuous supporter. It was clear to him that no reliance could be placed on the policy of Salisbury, and the Emperor was compelled to become the supporter of all the plans of the Tsar, in order to efface recollection of his concession to the policy of England. This extremely awkward position, in which he had been placed by his desire to come into practical contact with England, sufficiently explains his subsequent animosity towards Salisbury; for it was against him rather than England that the imperial animosity was felt.

The real disaster, however, arising from Salisbury's weakness (and, it must be admitted, his want of good faith) fell on Italy. The French Government had, on the second

advent of Crispi to power, made him direct overtures for a more conciliatory policy towards France, promising him distinctly a treaty of commerce and commercial advantages if he would withdraw from the accord with England in Morocco and Egypt. These propositions Crispi refused, and this refusal was the signal for the active undertaking of the Franco-Abyssinian intrigues against Eritrea. The accession of Italy to the English Oriental policy, reversing the tendencies of the former Italian ministry, which was entirely pro-Russian, carried Russia over to the new policy in Abyssinia, the result of which was the war on Italy that resulted in the disaster of Adowah. In vain Crispi appealed to England for at least a diplomatic support at the Abyssinian capital; Salisbury, grown still more timid, withdrew even the slight support of the Italian claims which Rosebery had offered; and England permitted the crushing of her only faithful ally to be carried out without even a diplomatic remonstrance, while Italy was punished for her adhesion to England, with the tacit consent of the English ministry. It is safe to say that, under similar circumstances, Lord Rosebery would have behaved differently, for Kimberley had already practically admitted the justice of Italy's demands before the Liberal ministry fell. The immediate cause of the fall of Crispi was the disaster of Adowah, but there were agencies at work, also indirectly due to the defection of England, which placed his ministry in a most critical situation even before the battle of Adowah.

The exasperation of the German Emperor next fell on Italy, already practically abandoned by England—for the movement up the Nile which was made immediately after the disaster of Adowah had no connection with that affair, but was made at the request of Crispi under apprehension of the co-operation of the Dervishes with the Abyssinians and the capture of Kassala by the former, and was much more in the interest of Egypt than of Italy. The Italian Government held that position only at the disposition of the Egyptian. On the other frontier, where the Italian ministry had requested permission to pass by English territory to make a diversion in favor of the Eritrean forces, Salisbury refused cynically the slightest moral support. The preservation of Kassala was necessary to Egyptian interests, and therefore the movement into the Sudan was made. Whereas Germany's policy in maintaining allied relations with Italy had been primarily to make that country a bond for securing England's at least passive adhesion to the Triple Alliance as the gage of European peace, with the advent of strained relations with England the renewed necessity for a more cordial understanding with Russia became the motive of the diplomacy of the Emperor, and Italy (especially under Crispi, who was strongly antagonistic to the understanding with the Tsar, established by Rudini in 1891 and renewed in 1895 after Adowah) lost all importance to Germany. When Crispi, therefore, coming to power after the fall of Giolitti, intimated to Germany that he should denounce the treaty of the Triple Alliance in order to secure in the new negotiations for its renewal better terms for Italian interests, the Emperor sent orders to the Quirinal to dispense with Crispi. This was the signal for the unloosing of all the intrigues of court and cabal (always hostile to that minister) against the ministry, and the instant result was to paralyze the direction of the affairs of Eritrea, where Crispi had insisted on superseding Baratieri, seen to be utterly incompetent for the increased burthen of an extended command. The immediate and disastrous result was the precipitate action of Baratieri, informed of the pending arrival of Baldissera, who would outrank and supersede him (a solution arrived at as a compromise between the dismissal desired by the ministry and the confirmation in the command insisted on by court and cabal), and the attack, contrary to the orders of the ministry, on the impregnable positions of the Abyssinians, the outcome of which had been by all the authorities foreseen, and by the opponents of the ministry desired as a demonstration of the ruinous policy of Crispi and a pretext for his dismissal.

Now we begin to perceive the sinister results of the cynicism of Lord Salisbury in reference to Italian interests in Africa. Instead of an ally on the upper Nile holding in check both Abyssinia and the Dervishes, England has opposed to her the greatly increased power of the Negus, supported and directed by France and Russia; the Italian Government, under the same influences, disposed to evacuate Eritrea; the already effected occupation by the French of Fashioda, on the upper Nile; and an up-stream fight to establish the desired communication between the upper and lower Nile valleys—the prime object of the Sudan expedition with all its sacrifices and embarrassments. This is an incomplete summary of the results of a single blunder in the foreign policy of Lord Salisbury, the refusal to support by his diplomatic pressure the interests of his ally, even in a case in which those of England were identical with those of the ally. If the English public were not indifferent to the opinion of other publics, it would not be possible for a government, Conservative or Liberal, thus totally to disregard the moral obligations of an alliance not formally consecrated in a written treaty. It will be difficult for England to find again even an Italian Government ready to enter into an alliance without some guarantee against being left to suffer the penalty of its complaisance.

I have already admitted the grave fact that the preceding ministry had compromised the situation, but not to the relative degree that Lord Salisbury, in the speech he has just made, has implied. It is true that the inertness of Gladstone, and, following him, Rosebery, had consented to aggressions in Siam, and to the adoption of extreme measures in Madagascar which were in violation of the engagement of the Republic; but Kimberley had given his successor an example of fidelity to Italy in his recognition of the right of Italy to claim the good will of England at Zeila, which Salisbury withdrew from; and, on the Makong, England was the guardian of Siamese interests which she had no right to sacrifice for peace's sake. One does not take such responsibilities on himself without the determination to uphold them, and the weakness of the Liberal ministry is no justification for the repetition of the same mistakes for which public opinion had so strongly condemned their predecessors. It is useless to palliate the weakness of Lord Salisbury by accusing Gladstone of having had no foreign policy. It was on this very ground that Gladstone was attacked, and yet Salisbury has surpassed Gladstone in his concessions, or, more properly, recessions, for he has been beaten back simply by the French aggressions. Tunis is the most flagrant case of Salisbury's omissions. The occupation of this province was effected by the consent of England, accompanied by the indifference of all the other Powers except Italy, to which it is a most grave menace, but with the express and distinct promise on the part of France that it should not be made a military station, nor should it be annexed. The fact is that it has been made a formidable military port, menacing all the defences of Italy, and commanding the passage from Gibraltar and Alexandria in the most effective manner. The recent treaty between England and France condones all the latter's violations of her engagements, and abandons Italy as completely as could be done under an understanding on a peace footing. X.

Correspondence.

COLLEGE ENGLISH ONCE MORE.

To the Editor of The Nation:

Sir: Judging by the communications which have reached me, the article in the *Nation*, some time since, reviewing the recent report of the committee on English of the board of Harvard Overseers, has attracted no inconsiderable attention. The same is true of another article of similar character in the Springfield *Republican* of November 15. Evidently, not only those engaged in the secondary education, but the professors and other instructors of English in the various universities, take a lively, and what seems likely to prove a most fruitful, interest in the discussion.

As a rule, these letters and communications dwell on two sides of the problem. The first is what may, with those engaged in the secondary education, be called the practical side; the second, the literary side. Of those who look at the question from its practical or school-teachers' side, the minds of most seem still working over the time problem. They say, and with much force when the matter is looked at from the point of view of the system in use: "Puzzled as we already are to fit boys for college at the average age of nineteen even, where are we to find the necessary time to assume 'English A' as part of the preparatory training? We are not now able properly to cover the acreage of Latin, Greek, French, history, etc., already assigned. The written translation of the classics, for instance, though confessedly much more exact and, as a training, severe than the oral translation, is far less rapid. If, then, written translation is to supersede, to any considerable extent, oral translation, we cannot cover in the time allotted an equal number of pages of the books which have, somehow, to be gone through. In other words, the exigencies of the college entrance examination are altogether more stringent as respects quantity than quality, and to those exigencies we must adapt ourselves."

This is interesting, as one view of an important subject. The answer is obvious. The scheme suggested by the committee of the Board of Overseers is certainly open to the objection of putting more stress on quality than on quantity. In so far, therefore,

it would seem that it is in possible conflict with the existing college entrance requirements. The issue, as thus presented, is one which the committee would probably not be disinclined to accept.

The other side of the problem I have referred to as the literary side. Quite a chorus of complaint comes up from the instructors in the preparatory schools in regard to the character of the authors and books prescribed. In making selections, those representing the colleges, it is asserted, seem to have followed the classic analogy. For instance, the orations of Burke and Webster have certainly stood the test of time; but it is questionable whether they are calculated to excite a great degree of literary ardor in the immature mind of to-day. Following the principle of analogy, they seem to have been prescribed as the modern exemplars of the school of Dēmosthenes and Cicero. Nevertheless, it is argued, there are those, even among the adult, who find the speeches of Burke and the orations of Webster, like those of Demosthenes and Cicero, severe reading, and reading hardly in touch with current modes of thought and expression. After all, must we not in some degree take conditions as we find them? And does not success in teaching, as in other branches of practical life, depend on the correctness with which we see those conditions and conform ourselves thereto?

This important branch of education is now regulated through what is called a "conference" of colleges, looking to uniformity in entrance requirements. The advantage of such a system is open to much question, especially as respects a department in what may be called a formative or plastic stage of development, as English at present unquestionably is. If its end be to bring about a species of combination in restraint of trade among the institutions of advanced education, so that no one of them shall secure more than its share of the business by putting the standard for admission lower than the others, it presents an aspect of the educational problem in no way edifying. It is again a case of quantity as opposed to quality. If, on the other hand, the result of the "conference" is to establish a rigid uniformity of requirement, it may safely be assumed in advance that it will be a uniformity of the pedantic and the commonplace. *Non tali auxilio*—no real advance in the higher education will come in that way. On the contrary, so far as English is concerned, it would seem most desirable that for the present at least, and probably for some time to come, each institution should reserve to itself the utmost possible latitude for experiment; for only through such liberty of individual action, and a free use of it, can success be evolved out of failure.

One letter in particular has reached me the suggestions in which, on both these aspects of the discussion, seem so germane and so well put that I am tempted to ask you to give wider circulation to them. I will merely say that this letter is written by a recent graduate of one of our principal colleges, now engaged in the English instruction at a preparatory school of highest reputation. In close touch with modern methods and thought, the system he describes might most profitably be adopted by other schools of like character.

"I am glad that in your last two reports, and especially in this last, you attack the neglect of teachers of the classics to insist upon English translations. We do emphasize that the English shall be idiomatic and not 'translation English.' To further this, we have required, this year, in the upper form, the (almost) daily written translation of a Latin or Greek sentence, which shall be in good English. At times the English teachers have read and criticised before the class the examinations in translation. It has been effective.

"May I describe, briefly, the composition work of our two upper classes, the fifth and the sixth forms—the former preparing for the elementary English examination, and the latter for English A?

"The fifth form write weekly themes, from two to three pages in length. These themes are marked and criticised in detail, with references to Hill's Rhetoric, parts of which are studied for this purpose. The first ten minutes of each recitation are often given to impromptu theme writing, and five minutes given to the reading of one or more themes. I avoid the extra work you mention on page 413 [of the reports], by marking, during those ten minutes, the themes of the previous recitation. (The size of the class permits this.) They are then returned.

"The work of the sixth form, insomuch as it corresponds to Freshman English, is of broader scope, and leaves less time for composition. The weekly themes now become fortnightly themes; but they are marked, criticised, and rewritten as in the fifth form. Hill's Rhetoric is studied systematically; certain books of required authors are read, etc. An essay of not less than fifteen pages is required from each boy. As in the fifth form—though not so regularly—there are ten-minute themes at recitations.

"This year I instituted daily themes of one page, the subjects preferably from observation or of opinion. It has not resulted 'in the displacement of some other indispensable study.' There has not been a single case of complaint of the extra amount of work involved; but, on the contrary, there is great interest in it. The themes are daily filed in such fashion that every one can read his own and those of others, and profit by the written criticisms. This innovation—now in practice six weeks; long enough thoroughly to test it—I undertook with some hesitation, for from its extra work on the boys' part I expected protests, but have had none. And the extra work on my part I expected would be tedious and irksome, but greatly to the contrary; for, though some themes naturally are stupid, some commonplace, and some interesting, they are in the main entertaining reading—even, at times, instructive. Improvement, better facility in writing, is already noticeable. I am convinced that the practice of daily writing is possible and beneficial, and that it can be made interesting for both teacher and pupils.

"In conclusion, I must commend your remark on the books now required for college examination. It is unpardonable when, from the vast field of good literature, much of which is adapted for this purpose, a list is selected which requires the detailed and analytical study of such books as Burke's speech on Conciliation with America. Nothing, in my opinion—it has almost been within my observation—can tend more to crush in boys the desire for reading which it is the duty of schools to further, or, if such a desire does not exist, effectually to prevent it being sown."

CHARLES FRANCIS ADAMS.

BOSTON, November 26, 1897.

IN DEFENCE OF FOOTBALL.

TO THE EDITOR OF THE NATION:

SIR: It is to be regretted that you feel it necessary to take the stand you do concerning football. The amelioration and development of the last six years are so patent to the close observer of the sport that criticism which does not record them will no longer be heeded. There has been, unquestionably, a time when the word "brutal" was properly applied to the game, and when it might justly be compared with prize-fighting. In the middle West, at any rate, this time is plainly past. There has been a steady and natural elevation of standards among the general public and among players; honorable sporting ideals now largely prevail, and the time seems not far off when they shall wholly prevail.

Friends and foes of the game alike may as well concede, now as well as later, that football is here to stay. It has ceased to be the peculiar possession of the college and has fairly become the national fall sport. It is not true that football is not a game for boys; if any limitation in that kind be made, it ought to be that it is a sport for boys alone. To boys it gives its maximum benefits in strength, presence of mind, physical courage, self-control, determination, good nature under stress. Among boys well matched in age and strength it is being played all over the country almost without accidents. Among boys especially, football is necessarily without the objectionable features which to-day characterize the college game. The schoolmaster of to-day who values his opportunities for moral training and stimulus has no tool more valuable than the game of football—granting, of course, a proper supervision and control.

Much is made of the danger of accident and of injury, and the dreadful casualties that occasionally occur make this fear appear reasonable. If, however, game after game is played with no injury more serious than a skinned elbow, if hundreds of men and boys play the entire season with no accidents worse than a bloodied nose—and both suppositions stand for verifiable facts—then it must be conceded that the accidents of football are not inherent or necessary, and that the sport really takes a place with yachting, shooting, and bicycling. A fatality or serious accident in any of these sports does not constitute an argument against them, simply because we all know that many persons habitually take part in them without accident; the same statement may be made with equal truth about football.

But those who are interested in this game, not merely on the sporting side—those who, like the present writer, value it for the real and enduring benefits which it brings—might fairly grant a much larger element of risk and yet justify the sport, risk and all. This is not the place, naturally, to enter at length into these arguments. They would, first, be its remarkable educational power in all points of physical prowess and the accompanying mental training; especial stress should be laid on the fact that these are not to be determined in the least by public games, but are found in the regular work and exercise. What I desire to emphasize here is that the training of football will in the long run prevent more accidents than it causes. It is a weak statement of facts to say that half, for example, of the innumerable bicycle accidents would not occur if riders possessed the presence of mind, alertness, and fertility of resource that are to be gained through this game.

At the same time football has its evils; they are not, however, apparent at any game. The immense evil of the sport to-day is the professional aspect which it assumes in the college for two months of every short school year. The crass form of professionalism, buying players and all that, is largely abolished; a more refined and evil form now exists. College authorities, who should strive steadily for a high plane

of thought and life, and who should never consent to less, now consent to and even favor the expenditure of thousands of dollars annually, the hiring of high-priced professional athletes as coaches, and the absolute devotion of hundreds of men, to the exclusion of all more serious interests.

Sport ceases to be sport when placed upon such a basis, and our colleges shamefully abandon their moral leadership when they countenance it for a day. Among high-minded and serious men sport has a place, but it is subordinated to the real concerns of life; it is a recreation and not a vocation. Life is turned upside down when it is permitted to be the be-all and end-all even for a time. In this evil and all its ramifying consequences lies the present demoralizing influence of football; its victims are the hundreds of young men who degenerate into professional athletes because of superior abilities in the game. Let the college professors who form the committees of control, subscribe to athletic funds, and cheer their teams from the side-lines, use their inalienable leadership to better purposes.

FREDERICK WHITTON.

THE DETROIT SCHOOL FOR BOYS,
December 2, 1897.

[We shall not reargue our contention that a game inviting the rudest physical contact of heavy human masses is, quite apart from slugging and other brutalities, unfit for youth. So far are we, either, from accepting Mr. Whitton's amendment that it is preëminently fit for boys, that we regard the aping of their elders by juvenile football players as one of the serious evils of the game. The scope of this remark might be extended to baseball. The influence of professionalism vulgarizes and corrupts downwards—and the irresistible tendency of all intercollegiate games is towards professionalism. We believe this tendency "has come to stay" much more firmly than any game or form of game. Language, manners, mental preoccupation, perverted in one generation, infallibly reflect their debasement in the succeeding. Who can view without alarm the effect on the young of examples in rowdyism, loafing, and gambling such as attend the present excessive devotion to sports under the best auspices? —ED. NATION.]

MISTRANSLATION CONDONED.

TO THE EDITOR OF THE NATION:

SIR: In your issue of the 21st of October last you gave currency to certain damaging statements as to the English translation of Professor Hommel's 'Ancient Hebrew Tradition.'

Fearing, from the interested attack made on the English translation of Maspero's *Mêlées*, that the Higher Critics would use the same methods to discount Professor Hommel's arguments, drawing across the trail the red-herring of a faulty rendering, I had the foresight to send revises of every sheet of the English translation to Professor Hommel, and to take care that the printed volume embodied all his corrections.

The following excerpt from a recent letter of Professor Hommel shows how he regards the charges made by the writer of your article:

"I have been greatly surprised to notice that some English critics of my book (for example, the much-respected Rev. Buchanan Gray, in the September issue of the *Expository Times*) have ascribed certain trivial differences between the English version and the German original to the arbitrary action of the Society for Promoting Christian Knowledge.

"To this I answer once for all that I read a clear revise of every sheet of the English translation, and that I possess a sufficient knowledge of English—witness my original English 'Assyriological Notes' in the Proceedings of the Society for Biblical Archæology—to warrant me fully in asserting that in no single instance has what I intended to say and to prove in my book failed to find its fitting and intended expression in the English translation.

"As for the trifling discrepancies discovered by my reviewers, they are of such a subordinate character that I consider it quite superfluous to go into them. When, for instance, in the Preface, the words *Aufstellungen der sog. modernen Pentateuchkritik* (assertions of the so-called modern critics of the Pentateuch) were rendered 'cobweb theories of the so-called modern critics,' this slight alteration met with my full approval, since in the text of the book I myself have more than once referred to the theories of Wellhausen in similar drastic terms."

I feel sure that in a spirit of fair play you will give space in your columns to this refutation of the charges made on the 21st ult., presumably by the lady who has on this side of the water been making most reckless assertions on the subject.

Yours faithfully,

EDMUND MCCLURE.

SOCIETY FOR PROMOTING CHRISTIAN KNOWLEDGE,
NORTHUMBERLAND AVENUE, LONDON, W. C.,
November 22, 1897.

[The serious aspect of the case is that Mr. McClure seems totally unconscious of two things: (1) That honest people generally consider small falsifications as objectionable as great ones, and (2) that no charge of falsification could have been made if the changes had not been surreptitious. If the English preface had stated that certain things had been altered or omitted for the safety of English readers, then, whatever course criticism might have taken, one path would have been closed to it. As to Prof. Hommel's testimony, it is charitable to believe that he read his English revise somewhat superficially. The possibility that his knowledge of English is on a par with the translator's knowledge of German, we are not disposed to consider. Surely, Prof. Hommel does not imagine, *e. g.*, that "I brought myself under the displeasure of Wellhausen" is the English equivalent for "Unter dem Banne Wellhausen's mich befindend"! Whether the "discrepancies" are altogether "trifling" we must leave our readers to judge after a careful perusal of the review which has called out Mr. McClure's letter.

Mr. McClure's allusion to Maspero's 'Struggle of the Nations' we are constrained to regard as unfortunate. Does he suppose us to be unaware that the chairman of the general literature committee of the S. P. C. K. has felt it necessary to issue a card officially disclaiming all responsibility for the translator's changes in that work?—ED. NATION.]

A CORRECTION.

TO THE EDITOR OF THE NATION:

SIR: It is always a pleasure to correct, even in matters of minor importance, any one who has pointed out one's own omissions or shortcomings. We beg, therefore, to call your attention to a slight misstatement in your issue of December 2. In the review of Mr. Parkhurst's 'Song-Birds and Water-Fowl,' your zealous reviewer criticises us for leaving Mr. Fuertes's name off the title-page—a very valid point to make, and an accidental omission which we shall have corrected at the earliest possible opportunity. When he goes on to say, however, that this artist is "nowhere mentioned in the book," he deviates in some degree from accuracy, for on the page in front of the frontispiece which contains an advertising notice of this book and its predecessor, the artist's name is inserted as the illustrator.

The matter would be hardly worth writing about except that the tone of the review is rather calculated to leave the impression that we were intentionally doing Mr. Fuertes less than justice.

Very truly yours,

CHARLES SCRIBNER'S SONS.

NEW YORK, December 4, 1897.

LITERARY ARCHÆOLOGICAL TREASURES.

TO THE EDITOR OF THE NATION:

SIR: As may be known to some of your readers, the latest discovery among the thousands of papyri found by our Egypt Exploration Fund at Behnesa, is a portion of Thucydides of the *first century* A. D. The society is now to publish the more important of these literary and historical treasures. The first volume, a quarto of 300 pages, with facsimile plates, will include:

"A fragment of the second or third century, containing most of the first chapter of St. Matthew's Gospel; a leaf containing the Acts of St. Paul and Thecla; portions of a Sapphic poem, probably by Sappho; fragments of Sophocles's 'Œdipus Tyrannus,' of Plato's 'Republic,' of Xenophon's 'Hellenica,' of Isocrates and Demosthenes, and of a lost comedy—about fifty lines; a part of an important treatise on metre—perhaps by Aristoxenus, the chief early authority on metre; much of a chronological work, with dates from 356 to 316 B. C.; a lengthy proclamation by Flavianus Titianus, Prefect of Egypt under Hadrian; an interview between the Emperor Marcus Aurelius and a Magistrate of Alexandria; a roll giving a list of the quarters and streets of Oxyrhyncus, and of their guards, in the fourth century A. D. And perhaps the portion of Thucydides, of the first century, just found."

All subscribers or donors of not less than five dollars will receive the volume, the illustrated 'Archæological Report,' and the annual report with subscriptions, etc. We undertake this work in faith, depending absolutely upon our universities, libraries, and an enlightened public to support it. Patrons contribute $25. Circulars and all information can be had from our Secretary, Mrs. Buckman, 59 Temple Street, Boston, or from Rev. W. C. Winslow, at 525 Beacon Street, Boston. Checks are payable to the

Honorary Treasurer, Francis C. Foster. Prof. Petrie is again our chief explorer.

WILLIAM C. WINSLOW,
Vice-President and Honorary Secretary.

BOSTON, December 1, 1897.

Notes.

A. S. Barnes & Co. announce for the present month 'Interpretations of Life and Religion,' by the Rev. Walton W. Battershall, D.D., and 'A Christmas Accident, and Other Stories,' by Anne Eliot Trumbull, daughter of the late Dr. J. Hammond Trumbull.

An eclectic 'Book of Verses for Children,' from Shakspere and Coleridge to James Whitcomb Riley, compiled by Edward V. Lucas, will be published by Henry Holt & Co.

Shortly to appear from the press of Doubleday & McClure Co. is 'The Science of Political Economy,' by Henry George, which the author had finished not long before his sudden death.

A. C. Armstrong & Son have nearly ready 'Music for the Soul,' from the writings of the Rev. Alexander Maclaren, D.D.

The Oxford University Press (New York: Henry Frowde) is about to issue 'The Odes of Keats,' by the Rev. Arthur Cleveland Downer, with memoir and illustrations; and the text of the Bacchylides papyrus in facsimile, as well as in ordinary Greek and in uncial type.

D. C. Heath & Co. will publish in January 'Gymnastic Stories and Plays for Primary Schools,' by Miss Stoneroad, Director of Physical Training in the public schools of Washington, D. C.

From T. Fisher Unwin, London, will issue 'Australian Democracy,' by Henry de R. Walker; the fifth volume in the "Adventure Series," namely, 'The Voyages and Adventures of Ferdinand Mendez Pinto,' done into English by Henry Cogan, with an introduction by Arminius Vámbéry; 'Wild Life in Southern Seas,' by Louis Becke; and a new rhymed translation from Catullus, 'The Loves of Lesbia and Catullus,' by Mr. Tremenheere.

The Master and Elder Brethren of the Trinity House, London, have requested their Secretary, Mr. Kent, to write a history of the corporation, which dates its establishment from the early years of the sixteenth century. The destruction of records caused by two fires has played havoc with the documents of the corporation, but there still exist at the Trinity House and elsewhere materials for a solid work; and, in the competent hands of Mr. Kent, a good book will be made. The Trinity House authorities have charge of the light-houses, light-ships, pilots, buoys, and beacons of the United Kingdom. The Master is usually a member of the royal family when one is available. The Duke of York holds the position at the present time, having succeeded the Duke of Edinburgh when the latter relinquished the office on becoming an independent sovereign, as Grand Duke of Saxe-Coburg-Gotha. The working head of the corporation is the Deputy Master, who is Sir Sydney Webb, a fine old sailor.

The fourth volume, or third supplement, of 'Poole's Index to Periodical Literature' (Boston: Houghton, Mifflin & Co.) almost rivals in bulk the third edition of the original work. It is the first to appear after the death of its founder, whose portrait is fitly here given, together with a brief laudatory sketch of his life by Mr. W. I. Fletcher, editor in chief of the continuation. But happily a nephew of Dr. Poole, Mr. Franklin O. Poole, an assistant in the Boston Athenæum Library, once presided over by W. F. Poole, is now associated on the title-page and in actual collaboration with Mr. Fletcher. Two religious journals, the *Independent* and the *Outlook*, have been indexed for the first time, and the *Book-Buyer*, *Book News*, and *Book Reviews* have been indexed chiefly with references to portraits, accompanied by notices of literary characters. We need say no more of a work whose utility is everywhere known in the studious and learned world. In the five years, 1892-'96, covered by the present volume, three pages are given to India, two and a half to Ireland, three-quarters to Hawaii, one-half to Cuba; one to currency; two to music; one-eighth to Grant, one-quarter to Bismarck and to Darwin; one-half to Napoleon; three-quarters to Tennyson; one page to Browning. Reviews of the principal works of the day are among the valuable references of the Index, together with obituaries of the more elaborate sort, and a thousand miscellaneous topics, political, social, and historical.

Mr. Bernhard Berenson's first book, 'The Venetian Painters of the Renaissance,' having run through three editions in as many years, is now brought out by his publishers, the Putnams, in a large-paper edition, with twenty-four photogravure illustrations from famous pictures of the Venetian school. Some additions to the "Index to Works" have been made, and the text has been relieved of the paragraph numbers and headings; but in the main the book is what it was when we noticed its first appearance, and at present we need dwell only on its handsome appearance and on the well-executed plates. It is noticeable that Paolo Veronese, inadequately treated in the text, is entirely unrepresented in the illustrations. Mr. Berenson considers him hardly a Venetian, but he was one of the greatest of painters, and as he is not likely to be treated of in any other of this series of volumes, it is a pity that something like justice should not be done him here. In general the selection of subjects for illustration leans to the choice of little-known pictures by second-rate men, and while some of them are very lovely and very welcome because not often seen, the total result is a certain lack of proportion. The strangest selection is that of Cima's "Apollo and Marsyas," a childish production which gives no idea of the powers of the author, limited as these were. Neither Bellini nor Titian is shown at his very best, and hardly even Tintoretto. But if it was intended to emphasize the idyllic and Giorgionesque sentiment that runs through so much of Venetian art, the choice of pictures has been admirably made.

The Century Company send us a 'Gallery of One Hundred Portraits' selected from the back numbers of the *Century Magazine*. Some of these are engraved from more or less well-known works of art, and some are from drawings made for the *Century*, but perhaps the larger number are from photographs from life. The persons represented range from Columbus and Washington to the present day, with a large preponderance of the contemporary, and include men and women famous in many lines of activity, nearly half of whom, however, are writers. The portfolio is not for sale at present, except in connection with a subscription to the magazine.

Mr. H. C. Christy's illustrations do not, in our opinion, justify the new edition of 'Hamlet' brought out by Dodd, Mead & Co.; but here is one more copy of the play in fair type and resplendent binding.

Very pretty book-making is 'The Lovers' Shakspere,' compiled by Chloe Blakeman Jones and published in Chicago by A. C. McClurg & Co.; but its scope is not as narrow as its title. This, perhaps, was meant to be intimated by the epigraph from "As You Like It," "Lovers are given to poetry"—which need not be amorous verse. Hence scores of quotations as uninflammable as "The first bringer of unwelcome news Hath but a losing office."

'The Comedies of Oliver Goldsmith,' illustrated by Chris. Hammond (London: George Allen; New York: Frederick A. Stokes Co.), bears comparison with similar treatment of the same works by Railton and Thomson. The full-page pen-drawings are clever and unaffected, and set off the excellent letterpress to advantage.

It is well to have such a "composite photograph" of Wordsworth as we get from the selections of several editors. Certain pieces none can possibly omit, and these furnish the type of the poet, while the individual preference among the less esteemed or less familiar verse lends the adumbrations to the defined physiognomy. Mr. Andrew Lang's 'Wordsworth' (Longmans) is accordingly welcome. It does not gain very much from Mr. Alfred Parsons's initial letters and headpieces; not more from Mr. Lang's introduction, which could have little new to say concerning Wordsworth's theory of poetry and the cause of his woful inequality. The arrangement is to be praised, having a certain chronological purpose and consistency. The binding is ornamental and in good taste.

Another selection, 'Poems by William Wordsworth,' is authored by Prof. Edward Dowden, and forms part of the Athenæum Press Series (Ginn & Co.); plainly made books for working students, and without pictures or ornament of any kind save good typography. The introduction here far outweighs Mr. Lang's; the selection is much more copious, especially of the sonnets; and there are plentiful notes.

The beautiful low-priced Centenary Edition of Carlyle's works issued in this country by the Scribners is continued with the Life of Frederick the Great, the first two of eight volumes. Each contains two portraits, and nothing is lacking to make this form of the great biography attractive in the extreme. More quaint, but, to our mind, less legible are the first two volumes of the *Spectator*, which come to us through the same firm; in form, handy enough, certainly, but with old-style type somewhat too much condensed, and the narrow margins appropriate to the antiquated scheme. The more open lines of Mr. Austin Dobson's preface, in the same type, are both more easy to read and (we believe) to remember. A pallid contrast is exhibited by the modern font employed in Mr. G. Gregory Smith's useful notes. Still, this is a painstaking and in a certain sense a comely edition, very tastefully bound. Dainty, again, is the Temple Edition of Scott published by Messrs. Scribner in connection with J. M.

Dent & Co., London. Here we have 'Waverley' in two pocket volumes delightfully bound in a soft, nearly flexible leather, bearing the stamp of the Scott monument in Edinburgh. The frontispieces are of Scott and of Melrose Abbey. Finally, a wholly domestic "Homestead Edition" of James Whitcomb Riley's 'Poems and Prose Sketches' is begun by this house with 'Neighborly Poems and Dialect Sketches.' There are nine more to come. No one will grudge the genial author whose humorous face serves as frontispiece such an array of fine linen and handsome print. But it is a subscription work, and, like Wordsworth's cloud, must move the purchaser altogether if it move at all.

The current number of the *Portfolio* (Macmillan) is a monograph on "The Earlier Work of Titian," by Claude Phillips, competently written and well illustrated, as is usual with this valuable publication. What will be likely to surprise the lover of Titian is the number of that artist's best loved pictures that are included in his "earlier works," so that one wonders what will be left of equal charm and interest to illustrate the study of his "later work," which we are promised. The surprise is lessened, however, when we reflect that Titian lived nearly a century and painted to the end, and that his "earlier work" therefore includes everything he did up to the time he was fifty. Probably few artists have produced their best work after that age. The last work mentioned here is the "Peter Martyr," and Titian was about fifty-one when it was painted.

Franz Hanfstaengl has begun the publication of a series of "Pictures in the National Gallery, London," which is to appear in ten or twelve parts (the statements in the Prospectus and in Part I. are at variance as to the number); each part to contain about ten full-page and five smaller photogravure plates, and to be accompanied by a descriptive text "written (unofficially) by Charles L. Eastlake, Keeper and Secretary N. G." The classified order of the pictures themselves on the walls of the gallery will be maintained in the publication, and Part I. deals with the early work of the Florentine School. Doubtless later parts, which will deal with the more developed works of the great epoch, will prove more interesting to the general public; but the present instalment will be welcome to students. The reproductions are good upon the whole, though somewhat disappointingly black, and misleadingly so to persons not acquainted with early Florentine art. The National Gallery is so rich that the whole work should be one of great value. It may be well to note that a good catalogue of the gallery exists in Cook's Handbook, published by Macmillan.

A holiday book which the children will like, even if artists do not, is 'Little Grown-Ups,' by Maud Humphrey and Elizabeth Tucker (Frederick A. Stokes Company). Miss Humphrey's water-colors show decided cleverness in many ways, but her children are too like dolls, and she seems to have little or no decorative sense. The result is a bright-colored, bonbon-box prettiness which is hardly artistic, though we have no doubt it will prove popular.

It is to be regretted that more judgment was not exercised before the publication of De Knight's 'History of the Currency of the Country and of the Loans of the United States.' Its issue as a Treasury document will give it the stamp of authority, but the contents deserve no such endorsement. A few books have been consulted by the writer, and Bayley's compilation of 1880 is heavily drawn upon for what relates to the loans; but the result is in no sense a history—it is not even a good account of the mechanism of currency circulation or national borrowings. To find such writers as Sumner and Berkey joined as of equal authority is as comical as is the dependence placed on David Jayne Hill, LL.B. There is no attempt at original research, or even at consulting the usual and accessible authorities, such as Bancroft. Mr. De Knight must have scampered through Sumner and, perhaps, Gouge, though the poverty of matter shows only too clearly that he did not appreciate the possibilities of the question, and has not in consequence been able to realize them. Some of the tables are good, but they may be found in the Register's report each year, and did not require a new setting. When the energy of Government finds expression and measure in the crudest compilations, such as this work, it is only right to call attention to misspent time and money. A mere glance at Bullock's reprint of Douglass's 'Discourse on the Colonial Currencies' shows how far De Knight has fallen short of doing what the opportunity called for, and what could have been well done in the Register's office, where the material undoubtedly exists.

A valuable contribution to physical chemistry is offered by Dr. Wilder D. Bancroft in his brochure of 250 pages on 'The Phase Rule' (*Journal of Physical Chemistry*, Ithaca, N. Y.). The work is a non-mathematical exposition of the phenomena of qualitative equilibrium from the standpoint of the phase rule of Gibbs and the theorem of Le Chatelier. Starting with the definition that a "phase" is a mass chemically and physically homogeneous, or of uniform concentration, the number of phases in a system being the number of such masses, the author proceeds to the discussion of systems of one, two, three, and four components with a clearness and thoroughness on the whole very satisfactory. The entire omission of mathematical treatment will be a disappointment to many readers, though it may perhaps commend the book to a few. Aside from this, Dr. Bancroft's work is a complete and admirable presentation of the subject which will be welcome by all students.

The principal article in *Petermann's Mitteilungen*, number ten, is an ethnological study of the West African races, by L. Frobenius. It is illustrated by a series of ten charts showing the distribution through the whole continent of the different kinds of shields used by the natives (as those of skin, leather, and wood), the bows, dress, houses, and masks, to indicate especially the extent of the Malay-Nigritian culture. A supplemental number contains a description of the physical features and the geology of northern and central Persia, by A. F. Stahl. The accompanying maps, which are of unusual excellence, not only show the geologic formation and the relative heights of the country, but also the principal roads, telegraph lines and stations, post-houses, inns, wells, and the places where useful minerals have been found.

Hatcher's explorations in Patagonia are highly creditable to Princeton University, whence the funds for his voyage were chiefly provided, and to the Bureau of Ethnology, which furthered his ends in various ways. He went out first in January, 1896, and returned in July, 1897. He has now set forth on a second expedition, after having left two reports on his observations—one of a more technical nature, on the geology of the region, published in the *American Journal of Science* for November; the other, more popular and descriptive, in the *National Geographic Magazine* for the same month. The deposit that yielded the largest return in fossils is the Santa Cruz formation, a great series of horizontal strata of fresh-water or continental origin. It stretches eastward from the base of the mountains to the sea, and is deeply transsected by valleys. After these valleys had been carved, the region was depressed, and during subsequent elevation heavy morainic deposits were strewn forward from the mountains, and a stony overwash was spread over the plains, while at various levels the sea cut strong shore benches, now seen in the conspicuous terraces by which the plains descend to the Atlantic. The account of the Canoe Indians living on the fiords of the western coast, and of the Tehuelche Indians of the plains, is graphic and instructive. Altogether, the two reports are most interesting.

Dr. Karl Federn is the latest German apostle of Walt Whitman. In the Vienna *Zeit* of October 16 and 23 he sets forth his reasons for imposing Whitman on American opinion as the greatest poet this country has ever produced. More than that, Whitman was "the soundest personality, most abounding in strength and love, most rejoicing in life, since Wolfgang Goethe walked the earth." This is a good instance of the growth of the legend. Five minutes' conversation with Whitman would have made it impossible to mention two such intellects in the same breath. To pass from the reading of Whitman's chummy letters in Donaldson's recent book on 'Walt Whitman the Man' to Federn's "He knew how to make his own the best of the Art and Science of our time," is to experience an acute sense of the ridiculous. Dr. Federn offers incidental translations of Whitman's rhythms, but condemns those which have heretofore appeared in German.

Among the lectures to be given at the Imperial Institute, London, during the current season are the following: "Electric Balloon Signalling Applied to Scientific Exploration in Arctic and Antarctic Expeditions," by E. S. Bruce; "The Mineral Resources of British Columbia and the Yukon," by A. J. MacMillan of Rossland, B. C.; "Canada's Metals," by Professor W. C. Roberts-Austen, F.R.S., and "The Petroleum Sources of the British Empire." At the opening meeting on the 19th of November, a paper was to have been read by Mr. F. G. Jackson of the Jackson-Harmsworth Expedition, upon the subject of "Three Years in the Arctic."

The Elizabethan Literary Society opened its fourteenth session in London on the 10th of November with a paper upon "The Shaksperian Drama Abroad." The lecturer was Mr. Sidney Lee, editor of the 'Dictionary of National Biography,' whose monograph upon Shakspere in the Dictionary has met with such favor that a demand has been made for its separate publication. During the session two dramatic recitals will be given: "Hamlet," by Mr. Henry Herbert, and "Romeo

and Juliet," by Mr. Stanley Philp. But this is not all. Living up to their motto, "Societie is the happinesse of life," ("Love's Labour Lost," act iv., scene 2), the enthusiastic members will also meet at eight o'clock on Friday evenings, to read the plays of Dekker and Lyly. The meetings are held at Toynbee Hall. Any Americans who may wish to join the society can communicate with the Honorary Secretary, Mr. James Ernest Baker, 22 Tavistock Place, Tavistock Square, London.

The Royal Geographical Society proposes to have a special meeting in London during its present session, in connection with the four-hundredth anniversary of the discovery of the Cape Route to India by Vasco da Gama in 1497.

The London *Daily Mail* continues to be a most successful venture in half-penny journalism. Its circulation has recently advanced by 50,000 a day, and now reaches 375,000. It is a bright little paper, and has made its way not only among humble folk, but among the well-to-do classes likewise.

Henceforth all women who wish to pursue their studies in the University of Göttingen must either show by satisfactory testimonials, or prove by an informal examination (a so-called *colloquium*), that they have the necessary preparation. The professors then make a report to the pro-rector, who gives his decision. Other German universities are adopting similar regulations, the object of which is to exclude those who are not fitted to enter with profit to themselves or with honor to the institution. These more rigid rules are a sign of progress, since they indicate a tendency to place women on the same footing as men in their relations to the university.

—We have often spoken of the usefulness of the fiction catalogues issued by the Boston Public Library, and their value is so widely recognized that it is perhaps unnecessary to comment on the announcement that a list of the novels added since 1893 (including many old books) has been published. There are, however, changes of taste in selection to be noted, as well as in methods of cataloguing and printing. As regards the last, we observe a serious deterioration in that, contrary to the almost universal practice, titles, authors, and explanatory words are all printed in the same type. Moreover, we find the cumbrous octavo page retained, though the Brookline experiment has proved the great superiority of the smaller form. Among the blunders which have caught our eye is entry of two books ascribed in the last edition to A. S. Hardy, under Shepherd, S.W. They were written by Mrs. Weitzel, the wife of the late assistant pastor of Plymouth Church. A similar error is putting the books of "Christian Reid" under Fisher instead of Tiernan. Marie Corelli is given the name of "Minnie Mackay," though she protested against being so honored in a letter to the press published in January, 1892. On the other hand, "Leslie Keith" (Miss Johnston) is accepted as a real name, while the two ladies who write as "E. D. Gerard" are entered under Gerard and an incorrect spelling of the name of one of them. Alexandre Dumas the elder and Alexandre Davy Dumas are given as distinct persons. But the oddest statement, considering the criticism which the location implies, is the classification of Gilmore's 'Advance Guard of Western Civilization' as a novel. We notice, also, that many well-known works, though on the shelves, are inaccessible through the title-list. Among these are 'Gil Blas,' 'Verdant Green,' 'Joseph Andrews,' and 'David Grieve.'

—In noticing the successive volumes of the 'Jesuit Relations' (Cleveland: Burrows Brothers Co.) we have so far neglected to comment upon the excellence of Mr. Thwaites's prefaces. It would be absurd to expect an index with each instalment; and until a general table of names and matters is furnished at the end of the work, this brief epitome of the narrative answers perfectly well. Volume ix. brings down Le Jeune's Relation of 1636 to the end of its first part, and covers the closing months of Champlain's life. We look to these letters for something more than a record of missionary progress; we look to them also for a description of the Indians, for notes of natural history, and for tidings of colonial growth. Heretofore we have confined attention pretty closely to what the Jesuits say of the natives and their conversion. The subject-matter of the present volume encourages us to turn towards those social aspects of Canadian life which are illustrated by the Relations. Le Jeune cannot be accused of concealing the real difficulties of the undertaking from his superior at home. He has already in the most graphic manner described the perversity of the savages and the extent of the language difficulty. But at heart he is hopeful, and when anything fortunate happens he makes the most of it. In this case his eighth chapter deals with "The Present State of New France on the Great River St. Lawrence." His first sentence is a Te Deum: "Il me semble qu'en contēplant le progrez des affaires de la Nouvelle Frāce, ie voy sortir une Aurore des profondes tenebres de la nuict, laquelle embellisāt de ses rayons dorez la surface de la terre, se change à la parfin en ce grand Ocean de lumiere que le Soleil apporte." At first the country was a mere storehouse for the skins of dead animals. The subject of private title was unsettled in France; famine and the English equally molested the few colonists; in a word, "les Lys y mouroient en leur naissance." Now, however, the calamities of that time are forgotten in the midst of a mild and peaceful prosperity. Many settlers have come in, the soil along the river is fertile, and in most respects the conditions of life are easier about Quebec than in France. A few libertine spirits have made their appearance, but apparently none so drunken or blasphemous that a short time spent on the *chevalet* proved a futile corrective. Le Jeune is always enthusiastic over the St. Lawrence. One panegyric of Champlain and another of the beaver are among the striking passages of his report for this year.

—There has been much dispute about the authorship of the curious little Latin treatise called 'A Question of the Water and of the Land,' generally attributed to Dante. It upholds, with thoroughly mediæval arguments, the proposition that the earth is everywhere higher than the surface of the sea. It came to light only in 1508, when it was published in Venice, under Dante's name, by Moncetti, an Augustinian monk with some pretensions as a mathematician and astronomer. No manuscript of it is known to exist, and Moncetti, who took the liberty of correcting Dante's handiwork *diligenter et accurate*, was a tricky flatterer, whose word has no value whatever. That the treatise was really written by Dante, however, is the ground taken by Charles Hamilton Bromby, who is the first to translate it into English (London: David Nutt); and his view is in accord with the trend of the latest opinion among scholars. Gaspary, in his 'Italian Literature' (i., p. 522), says that "a forger of the sixteenth century who could so write in Dante's manner and with Dante's words," seems to him a great wonder. Still more recently Dr. Edward Moore, whose opinion in these matters has always great weight, has indicated, in his 'Studies in Dante,' a feeling that the manner of using Aristotle and other authorities in this little treatise is so similar to what we know to have been Dante's, as to raise a strong presumption in its favor. The work has therefore now more interest for Dante students than it had a generation ago, and it is a favorable time for a translation of it to appear. We cannot say that we think Mr. Bromby has made the most of his opportunity. To be really valuable, such a translation should have been accompanied by an abundant apparatus, at once expository, historical, and scientific. Mr. Bromby's attempts in these directions can hardly be called serious. The translation appears to be generally accurate enough, though it is in places intelligible only after references to the original (but this is a fault of how many translations!). All Dante's works, great and small, have now been printed in English versions, and we hope some publisher of a good translation of the 'Divine Comedy' will undertake to collect them, and issue them in an edition uniform with that of the great poem.

—A work that for nearly a thousand years —say from A. D. 850 to 1750—enjoyed a popularity almost unparalleled, appears (who knows but for the last time?) in an English dress. It is 'The Consolation of Philosophy of Boëthius,' translated into English prose and verse by H. R. James (London: Elliot Stock). It is on the whole a satisfactory piece of work, though the versification is hardly easy; and makes a pretty book, which anybody will like to put on his shelves. Mr. James mentions that before his there have been "nearly a dozen" English and Anglo-Saxon versions. This statement is probably based on an inspection of Watts and Lowndes, but we can enumerate more: First, King Alfred's; second, Chaucer's; third, that of John Waltionem, or Walton, 1525; fourth, Lydgate's, 1554; fifth, that of "George Colvile, alias Coldewel," 1556; sixth, that of I. T., 1609; seventh, that of S. E. M., 1654; eighth, that of H. Coningsby, 1664; ninth, that of "A Lover of Truth and Virtue," 1674; tenth, Lord Preston's, 1695 (revised 1712); eleventh, Warburton's partial translation; twelfth, W. Causton's, 1730 (improved by Bellamy, 1768); thirteenth, that of the Rev. Philip Ridpath, 1785; fourteenth, R. Duncan's, 1789; fifteenth, that of J. S. Cardale, 1829 (from Alfred's paraphrase). In English no one version has gone through many editions. In French, that of Père René de Ceriziers, published in 1636, appeared in its twelfth edition in 1647, and was the leading one for very many years after that. The translation of Léon Colesse was also often reprinted. That of the dramatist Judicis de Mirandol received a prize from the Academy in 1861. In Italy the translation of the poet Varchi was printed every few years

from 1551 to 1798. In Spain that of Villegas, 1665, is highly extolled. Of versions earlier than Chaucer's, two, into High German and French, are of great linguistic importance. There was one into Hebrew, and a second into French by the author of the 'Roman de la Rose.' Leibniz abridged the work for his private edification. But even Leibniz evidently found the first two of the five books the best, the later ones being too much occupied with metaphysico-logical subtleties. By a noticeable coincidence, along with Mr. James's edition we receive from David Nutt, London, a sumptuous yet modestly tasteful reprint of our No. 5 above, viz., Colvile's 'The Boke of Boecius, called the Comforte of Philosophye, or Wysdome,' but without "the Latin added to the mergentis." The style is simpler than most of the Elizabethan of a generation later, and is pleasing. The metres are in prose; but the translator's marginal glosses afford some compensation. This elegant volume is the fifth of the "Tudor Library," and is edited by Ernest Belfort Bax. Two hundred and fifty copies of it have been printed at the Chiswick Press. Mr. Bax, in an introduction, seems to think that the Christian books attributed to Boëthius may have been written by his son. They are, however, almost unquestionably earlier than the celebrated Boëthius, and are probably by that Boëthius whose wife was Elpis.

—Carlo Tivaroni has completed his critical history of the Italian Risorgimento by the publication of the second and third volumes of his 'L'Italia degli Italiani' (Turin: Roux, Frassati & Co.). We noticed the leading characteristics of this work on the appearance of the first volume, and need only repeat here that it is indispensable for any one who wishes to have the latest material concerning the history of Italy's struggle for independence. Tivaroni preserves throughout a critical and sober spirit, and is able to deal with Mazzini, Cavour, and Garibaldi without the prepossession which usually converts Italian writers into blind partisans of one of them and equally blind enemies of the others. Likewise, he has not allowed the epic qualities of that romantic struggle to divert his attention from its practical and often unideal details. He brings his story down to the entrance of the Italians into Rome in 1870, and then devotes 400 pages of his last volume to a series of monographs on the men of the Risorgimento, including some thirty of the leaders of second rank, besides Victor Emanuel, Cavour, Garibaldi, and Mazzini. We must again express regret that the usefulness of so valuable a work must be greatly restricted owing to its lack of proper indices, headlines, divisions into chapters, and other appurtenances of intelligent publications. Tivaroni belongs to the school of historians who affect to disdain putting their material in artistic form, and who abhor the quality of readableness, as men of science abhor being "popular." It is indeed strange that conscience, which impels such men to spare no time or fatigue in collecting their material, deserts them when they come to present it. They forget that the moment they sit down to write, they place themselves within the sphere of literary laws which will not budge for all their claim of being impartial and scientific. Sig. Tivaroni carries his method out to the smallest details. Ignoring footnotes, he wedges into his text the titles of the books he refers to, but usually fails to give the necessary volume and page. We have come upon one sentence thirty-three lines long (about 350 words), punctuated only by commas, and consisting of original and quoted descriptions of Cavour's personal appearance (iii., 413-14). For a writer to be content with so primitive and awkward a style is to throw away all the helps to perspicacity which the art of writing has invented. We fear, therefore, that, although Sig. Tivaroni's history is a real storehouse of information, it cannot be easily consulted, and will never be widely read; but students must perforce labor through it. It should be added that his 'L'Italia degli Italiani,' embracing the years 1849-70, completes his still more extended history, which goes back to the middle of the eighteenth century. The whole is the most important monument of historical erudition produced in Italy in our time.

RECENT BRITISH POETRY.

It is interesting to find Mrs. Browning, in her lately published letters (under date of October 1, 1844), defending the American poets from the charge of effeminacy, and pointing proudly in their vindication to the now forgotten Cornelius Mathews and his 'Poems on Man.' Even at that day, it seems, there was a demand for something "virile" and "masculine"; and the poets of fifty years ago, who created American literature and who knocked down slavery, were not considered to meet this demand. "Emerson," says Mr. J. J. Chapman, "undoubtedly sent ten thousand sons to the Civil War," and it would be difficult to tell how many more were sent by Whittier and Lowell, while a single such poem as Longfellow's "Psalm of Life" educated a generation in courage; but it is not apparent that the poetry of the whole race of "masculine" poets, from Mathews to Whitman, ever furnished a recruit. Every real art-critic from Joubert to Ruskin has pointed out that the test of great works must be in combining delicacy with power: *Où il n'y a point de délicatesse, il n'y a point de littérature.* Those who fail to see this are like those foreigners who pass by the masterpieces of the world as brought together in the Salon Carré at the Louvre, and go into ecstasies over the row of bulky and florid Rubenses in the gallery just outside.

Mr. George Meredith is one of the poets habitually approved for the "masculine" quality. It is to his credit that he has banished from his 'Selected Poems' (Scribners) the most exaggerated and fantastic. To get rid of large words and involutions is beyond him, but these are at least minimized, and the work stands at its best. His exquisite observation of nature is here, and his yearning after a high philosophy of life; yet the result is not adequate, for he has neither the joy of the pietist nor the placidity of the philosopher. Browning and Tennyson, each in his way, scored a triumph and attained to peace. Mr. Meredith does not attain it, but he at least points out the way towards it. We must accept science, must look facts in the face, must tolerate no lies; and this is as far as we can go; we must accept things as they are and talk no nonsense. If this seems insufficient in an age which has produced Emerson's "The Problem" and Browning's "Rabbi ben Ezra," that is not Mr. Meredith's fault; he does what he can. In one thing only he has equalled or even surpassed Browning, the continuous and absorbing movement of a narrative, and this in only one poem, doubtless his masterpiece, "The Nuptials of Attila." That this takes its movement and even its form out of Hodgkin's rhymed version of the Latin prose of Jornandez, is perhaps no more of a reproach than for Shakspere to borrow the theme of "Hamlet" or Goethe the tradition of Faust; although it doubtless brought some shock to those who for the first time came upon the original. We have long since paid tribute to this fine poem, with the bold sweep of its opening—

> "Flat as to the eagle's eye
> Earth hung under Attila."

As if to show that the strong can give forth sweetness, the author himself selects also the following example of the domestic muse (p. 61):

MARIAN.

I.

She can be as wise as we,
And wiser when she wishes;
She can knit with cunning wit,
And dress the homely dishes.
She can flourish staff or pen,
And deal a wound that lingers;
She can talk the talk of men,
And touch with thrilling fingers.

II.

Match her ye across the sea,
Natures fond and fiery;
Ye who zest the turtle's nest
With the eagle's eyrie.
Soft and loving is her soul,
Swift and lofty soaring;
Mixing with its dove-like dole
Passionate adoring.

III.

Such a she who'll match with me?
In flying or pursuing,
Subtle wiles are in her smiles
To set the world a-wooing.
She is steadfast as a star,
And yet the maddest maiden:
She can wage a gallant war,
And give the peace of Eden.

'Poems by the late John Lucas Tupper, selected and edited by William Michael Rossetti' (Longmans), form the memorial of a young poet and artist who was a member of the once-famous Pre-Raphaelite Brotherhood. His poems, such as they are, do not now carry the weight which they perhaps bore to the readers of the *Germ*, but the following wild, imaginative picture (p. 15) is worth giving, as having been extremely admired by Dante Rossetti, who declared that if Poe had written the poem it would have enjoyed world-wide celebrity. It seems curious, however, that Rossetti did not miss Poe's music:

EDEN AFTER SIXTY CENTURIES.

There are rows of poplars
Down the garden walks;
There are cedars standing
On the dewy lawns;
They have waited many
Mornings of the Spring;
Many swallows fly there,
Many birds sing;
And now is Summer.

Here be great white lilies
Leaning down their stalks.
The roses, like lamps,
Standing on their stems,
Burning out their spirit
From morning unto even,
Are dying and born,
And all the perfume given
Is given to waste.

The flowers upon the trees
Are mixed with withered flowers,
And black shrivelled seeds
Of last year's growing.
There is no knowing
How long time ago—
If there were hours
And flowers did grow—
A hand took the flowers.
. . . . . .

The palm tree is weeping,
The gums ever dropping,
The long lawns sleeping,
Nothing is dying,
Growth is not stopping,
Cumbered with nothing,
The low lawns are lying
In their green clothing.

He must be coming.
These must be waiting.
Are the bees not humming?
Are they not translating
The golden pollen
From flower to flower?
Are they not debating
In converse sullen
About the hour?

We owe also to the editorship of Mr. William Rossetti a volume by his sister Christina entitled 'Maude: Prose and Verse; 1850' (Chicago: Stone). It is a tale for girls, interspersed with poems, most of which have been previously published, though the story itself was never before printed; and it was written in the author's nineteenth year. Maude is a young girl represented as foolish, vain, and sinful, and she dies penitent in the last chapter. Most readers will probably concur with the editor when he says (p. 5): "If some readers opine that all this shows Christina Rossetti's mind to have been at that date overburdened with conscientious scruples of an extreme and even of a wire-drawn kind, I share in their opinion. . . . So far as my own views of right and wrong go, I cannot see that the much reprehended Maude commits a single serious fault from title-page to finis."

If any one wishes to see a real reproduction of Poe, he will find it less easily in Tupper than in Francis Thompson's 'New Poems' (Boston: Copeland & Day), in such a poem as the "Mistress of Vision" (p. 8):

Where is the land of Luthany,
And where the region Elenore?
I do faint therefor.
"When to the new eyes of thee
All things by immortal power,
Near or far,
Hiddenly
To each other linkèd are,
That thou canst not stir a flower
Without troubling of a star;
When thy song is shield and mirror
To the fair snake-curlèd Pain,
Where thou dar'st affront her terror
That on her thou may'st attain
Perséan conquest; seek no more,
O seek no more!
Pass the gates of Luthany, tread the region of Elenore!"

But those who founded high hopes on Mr. Thompson's earlier poems, and thought that under improved conditions his really fine mind would clarify itself and yield sweeter and more pellucid waters, must be still left in uncertainty. The habit of the weird, the involved, the distorted, has gone too far, and, in this volume as in the other, the traits of sweetness and simplicity are quite exceptional. What can be said of an author who, even now, fills his pages with lines so needlessly and defiantly repulsive as these, under the name of "An Anthem of Earth" (p. 89)?

The incredible, with bloody clutch and feet
Clinging the painful juts of jaggèd faith.
Science, old noser in its prideful straw,
That with anatomising scalpel tents
Its three-inch of thy skin, and brags—"All's bare,"
The eyeless worm, that boring works the soil,
Making it capable for the crops of God;
Against its own dull will
Ministers poppies to our troublous thought,
A Balaam come to prophecy—parables,
Nor of its parable itself is ware,
Grossly unwotting; all things has expounded
Reflux and influx, counts the sepulchre
The seminary of being, and extinction
The Ceres of existence: it discovers
Life in putridity, vigour in decay;
Dissolution even, and **disintegration.**

Here the controlling thought, when we come to it, is good, but how altogether unpleasing the process! Yet who would believe that the same pen could write these sweet and gracious lines—the prayer of a little child (p. 97)?

EX ORE INFANTIUM.

Little Jesus, wast Thou shy
Once, and just so small as I?
And what did it feel to be
Out of Heaven, and just like me?
Didst Thou sometimes think of *there*,
And ask where all the angels were?
I should think that I would cry
For my house all made of sky;
I would look about the air,
And wonder where my angels were;
And at waking 'twould distress me—
Not an angel there to dress me!
Hadst Thou ever any toys
Like us little girls and boys?
And didst Thou play in Heaven with all
The angels that were not too tall,
With stars for marbles? Did the things
Play Can you see me? through their wings?
And did Thy Mother let Thee spoil
Thy robes with playing on *our* soil?
How nice to have them always new
In Heaven, because 'twas quite clean blue!
Didst Thou kneel at night to pray,
And didst Thou join Thy hands, this way?
And did they tire sometimes, being young,
And make the prayers seem very long?
. . . . . .
And did Thy Mother at the night
Kiss Thee, and fold the clothes in right?
And didst Thou feel quite good in bed,
Kissed, and sweet, and Thy prayers said?
Thou canst not have forgotten all
That it feels like to be small,
And Thou knowest I cannot pray
To Thee in my father's way—
When Thou wast so little, say,
Couldst Thou talk Thy Father's way?

The Queen's Jubilee in London, which undoubtedly kept the poets and philosophers in the background, brought forth only one strain of vigorous verse during its passing; this being the poem of a man too thoughtful and too accomplished, we regret to say, to be widely known beyond his immediate circle. Mr. Theodore Watts-Dunton (formerly Watts) is indeed known to some Americans as the former literary critic of the *Athenæum*, or as the writer of the fine essay on Poetry in the 'Encyclopædia Britannica,' or as the author of some of the finest sonnets in the English language, or, finally, as the friend and house-mate of Mr. Swinburne; but he offers one of the repeated illustrations of the truth that some of the rarest qualities, whether of wits or wines, are not readily transportable across the ocean. His first published book, indeed, is his 'Jubilee Greeting at Spithead to the Men of Greater Britain' (London: Bodley Head), in which there is as racy a flavor of salt air as in anything of Kipling's, with a far finer touch. But we turn by preference for quotation to these two noble closing sonnets, addressed not to children of the Empire alone, but to a wider public (p. 30):

THE BREATH OF AVON.

(To English-speaking Pilgrims on Shakspere's Birthday.)

I.

Whate'er of woe the Dark may hide in womb
For England, mother of kings of battle and song—
Rapine, or racial hate's mysterious wrong,
Blizzard of Chance, or fiery dart of Doom—
Let breath of Avon, rich of meadow-bloom,
Bind her to that great daughter sever'd long—
To near and far-off children young and strong—
With fetters woven of Avon's flower perfume.
Welcome, ye English-speaking pilgrims, ye
Whose hands around the world are joined by him,
Who make his speech the language of the sea,
Till winds of Ocean waft from rim to rim
The Breath of Avon: let this great day be
A Feast of Race no power shall ever dim.

II.

From where the steeds of Earth's twin oceans toss
Their manes along Columbia's chariot-way;
From where Australia's long blue billows play;
From where the morn, quenching the Southern Cross,
Startling the frigate-bird and albatross
Asleep in air, breaks over Table Bay—
Come hither, pilgrims, where these rushes sway
'Tween grassy banks of Avon soft as moss!
For, if ye found the breath of Ocean sweet,
Sweeter is Avon's earthy, flowery smell,
Distill'd from roots that feel the coming spell
Of May, who bids all flowers that lov'd him meet
In meadows that, remembering Shakspere's feet,
Hold still a dream of music where they fell.

'Opals,' by Olive Constance (Bodley Head), has a striking poem on the music of Dvorák (p. 73); and Dollie Radford, in her 'A Light Load' (Mathews), has her usual clear, sweet touch. Mrs. Radford represents, with her husband, that rare combination to which the Browning letters are just now directing attention—the marriage of two poets—and with such results as this (p. 46):

HEART AND HOME.

Oh, what know they of harbors
Who toss not on the Sea!
They tell of fairer havens,
But none so fair there be

As Plymouth town outstretching
Her quiet arms to me—
Her breast's broad welcome spreading
From Mewstone to Penlee.

And with this home-thought, darling,
Come crowding thoughts of thee—
Oh, what know they of harbors
Who toss not on the Sea?

Among all the countless books of English poetry there is but one which gives to the American a single vivid glimpse of the average rural Englishman of the lower class; slow of comprehension, slow either to begin fighting or to leave off, yet able to die unflinchingly for friend or for country, by land or sea. That book is "A Shropshire Lad," by A. E. Housman (Bodley Head), a work which strikes one at first as being limited in compass and perhaps a bit commonplace, but proves itself at last to have just the commonplaceness of the primitive human heart. In a series of simple lays, the longest but a page or two, and the gayest tinged with sadness, it gives a continuous kinetoscopic view of the one man, the Shropshire Lad. In the vigorous verses we quote he is on his way to London (p. 53):

As through the wild green hills of Wyre
The train ran, chasing sky and shire,
And far behind, a fading crest,
Low in the forsaken West
Sank the high reared head of Clee,
My hand lay empty on my knee.
Aching on my knee it lay:
That morning half a shire away,
So many an honest fellow's fist
Had well nigh wrung it from the wrist.
Hand, said I, since now we part
From fields and men we know by heart,
For strangers' faces, strangers' lands—
Hand, you have held true fellows' hands.
Be clean then; rot before you do
A thing they'd not believe of you.
You and I must keep from shame
In London streets the Shropshire name:
On banks of Thames they must not say
Severn breeds worse men than they.

American scholarship may take some satisfaction in the editing, by Dr. F. I. Carpenter of the University of Chicago, of the volume, 'English Lyric Poetry,' in the Warwick Library (London: Blackie). His preliminary essay is not merely studious and thoughtful—not merely full of good phrases, as when he characterizes the Elizabethan lyric as "a holiday lyric," or speaks of the "self-conscious artlessness" of Herrick—but it has method, solidity, and clearness, and is withal wholly readable. How far Dr. Carpenter is responsible for the text and the proof-reading is not made clear; there are, however, defects in both. In Peele's fine poem "The Man at Arms," instead of "age his arms," we should read "old age his arms" (p. 58); in Vaughan's beautiful

"They are all gone into a world of light," the flown bird does not sing in a "fair well," but in a "fair dell" (p. 25); and the famous song "O waly, waly," should not close with Allingham's version, "And the green grass growing over me," but with the far more impressive line accepted by Professor Child, "For a maid again I'll never be."

'Poems by A. and L. [Arabella and Louisa Shore]' (Richards) is mainly a reprint of some that were previously published under the same initials, one or both of their authors being now dead. They consist in part of dramas which show undoubted strength, although far less than is to be seen in those of the other two gifted English women who masque under the united name of Michael Field; and in part of war lyrics called forth by the Crimean war. It is a curious commentary on contemporary feeling that the war which these poets described, forty years ago, as (p. 341)

"No more the passionate triumph of an hour,
But the grave victory of world-redeeming power,"

should be thus characterized in a note by the present editors: "We are less inclined to dwell on them [the war lyrics] because we have learned to regard the Crimean war, in spite of the triumph of our soldiers, not as a just cause and a glorious achievement so much as a deplorable blunder" (p. 335). But that one or the other of these two sisters had also a very light touch, is seen in this graceful translation from Coppée (p. 356):

MORCEAU À QUATRE MAINS.

The windows open on the park
Where the tall trees, from glade to glade,
With arching foliage greenly dark,
Bathe all the summer lawns in shade.

I turn about to rest anew
My head in yonder easy chair,
When, lo! the landscape still I view,
Reflected in the mirror there.

Idly I smile, as o'er and o'er
Two parks to right and left of me,
Now through the glass, now thro' the door,
Repeat each other, tree for tree;

And, by a pretty sort of chance,
The two young sisters sit apart,
Complete in dainty elegance,
To play the music of Mozart.

Just as the landscape double seems,
The other's copy each appears,
And the same golden jewel gleams
Repeated in the four small ears.

Their eyes upon the keys are bent,
So I may scan, as I repose,
The same rose in their tresses blent,
And on each mouth too the same rose.

And, sometimes, rising from my place,
I steal to the piano near,
And lean upon the ebon case
To see them rather than to hear.

Mr. Alfred Ainger, in editing a definitive edition of the 'Poems of Thomas Hood' (Macmillan), has perhaps conferred a doubtful service on the fame of that most interesting man. Most of the poems collected, especially of the more humorous order, can excite but a feeble interest in the modern reader; and a single thin volume would readily contain all those on which Hood's permanent reputation will rest. Such a volume would coincide practically with that published by Longman in 1827—Hood's first and last volume of serious verse, 'The Plea of the Midsummer Fairies, and Other Poems.' Mr. Ainger tells us in his preliminary memoir that this book fell all but dead from the press, and that the author bought up as many of the "remainder" copies as he was able, to save them from the butter shops. The fate of Thoreau's 'Week' was scarcely more pathetic. It seems almost incredible that the exquisite minor poems contained in this volume—as "Fair Ines," the "Ode to Autumn," and that remarkable sonnet on "Silence," so often attributed to Poe—should have so thoroughly escaped notice. The neglect was largely due, perhaps, to Hood's acquired reputation as a joker, an impression so controlling that people actually distrusted his more serious words, and Mr. Ainger tells us in his memoir (p. lxxvii) that Palgrave, in the first edition of his 'Golden Treasury,' actually omitted from the tender poem, "The Death-Bed," the touching stanza—

"Our very hopes belied our fears,
Our fears our hopes belied.
We thought her dying when she slept
And sleeping when she died"—

and explained in his note that this was because it was "ingenious," and that ingenuity and pathos were mutually destructive. It is a comfort to think that in a moment of returning sanity this stanza was replaced.

The myriad readers of the 'Golden Treasury' of the late Sir Francis Palgrave could but greet with pleasure the final publication of the long-promised second series (Macmillan), containing selections from the work of authors who were excluded from the first series as living in 1861. The place of the delayed addition has been partially filled for years, as far as the American edition of the 'Golden Treasury' is concerned, by an excellent compilation made by Mr. John Foster Kirk, and appended as Book Fifth in the Philadelphia edition of 1884; but it was of course interesting to see what Prof. Palgrave finally substituted. He apparently intended, in 1861, to include American poets in his range, for he mentioned in his preface of that date the names of Lowell and Bryant; but this plan was fortunately abandoned—we say fortunately, because it would have made the field too large, and the increasing divergence between English and American themes and properties would have introduced new complications. Even as it is, the reader must acknowledge with regret that the new series fails to command, at first glance, the confidence inspired by the first one, while it can hardly avoid including much that is beautiful. The editor had the whole range of contemporary and recent British verse to draw upon, except that he was not permitted—a serious prohibition, truly—to use anything by Mr. Swinburne. Yet the only living authors from whom he actually drew are the Duke of Argyll, Gerald Massey, Sir Lewis Morris, Frederick Tennyson, Aubrey de Vere, and Richard Wilton. He could not, perhaps, have been expected to include the very latest-born of the Muse, but he did not insert one word by Sir Edwin Arnold, Alfred Austin, Philip James Bailey, Austin Dobson, or George Meredith among the living, or by Alford, Faber, Sterling, or William Morris among the dead. Yet more amazing to relate, he took but one solitary extract from Landor, while finding room for ten from Patmore, twelve from Barnes, fifteen from Christina Rossetti, and seventeen from Arthur O'Shaughnessy. Surely an editor who thus selected his Golden Treasury must have followed the suggestion of Emerson, and have written upon the lintels of his doorpost "Whim!"

THE ENGLISH STAGE.

An Account of the Victorian Drama. By Augustin Filon. Translated from the French by Frederic Whyte. London: John Milne; New York: Dodd, Mead & Co.

At first sight it may seem curious that one of the most entertaining, appreciative, discriminating, and instructive of recent books upon the English stage should have been written by a Frenchman; but M. Augustin Filon differs from the vast majority of contemporary theatrical chroniclers in being not only a genuine student of his subject, without "axes to grind," but a man possessing good general scholarship, true critical faculty, and a liberal endowment of the sparkling Gallic wit. He has, moreover, the special qualification of long and close familiarity with the proceedings of all the principal London playhouses. The only weak spots in his work are those in which he has supplemented the results of his own keen observation by information drawn from outside sources. So long as he takes Mr. William Archer for a guide, he is in tolerably safe hands, but it is a different matter altogether when he borrows the inspiration of others—Mr. Clement Scott, for instance. What he has to say about the drama of the first half of the century, the days of Macready, Knowles, Kean, and Jerrold and the privileged theatres, is mostly an echo of old voices, with here and there an incisive comment, as when he remarks that the criticism of Hazlitt and Leigh Hunt is rather a comparison of actors than an appreciation or a classification of plays. It is in the pages of Charles Lamb alone that he can find the expression of a general idea.

There is no lack of this power of generalization in M. Filon's narrative or comment when he comes to his own period of the Victorian era. His view covers the whole field, and he describes the salient features in it with unerring instinct and admirable point and vivacity. Nothing could be much better in its way than his survey of what he calls the "abortive renaissance" dating from Macready's Covent Garden experiment. As a Frenchman, of course, he is immensely and justly sarcastic over Bulwer Lytton's travesties of French character in "Richelieu" and "The Lady of Lyons," but this little manifestation of heat does not in the least affect the truth of his pitiless exposure of the pinchbeck quality of these plays, and of "Money," with their false sentiment, conspicuous artifice, indifference to fact, in nature or history, and gross appeals to class prejudices. "A Gothic Democrat," he calls Lytton, who basely tried to flatter the proletariat by pretending to attack the society in whose front rank it was his prime ambition to shine. The assaults are savage, but not reckless, being fortified by plentiful and pungent illustration and delivered with delightful grace and skill. His summary of the general characteristics of the drama of the fifties, of the stock properties, so to speak, which, in various disguises, were presented over and over again with damnable, but unconscious, iteration, is, in spite of its humorous exaggeration, remarkably comprehensive and perspicacious. The paralysis of imagination which then prevailed M. Filon attributes in part to a revival of Puritanism, in a mild form, on the accession of the Queen. It is doubtful whether an Englishman, in full touch with the national humor, would have discovered grounds for this suspicion, but the idea is ingenious, and furnishes occasion for some excellent raillery concerning the vague

functions of the censor and the disastrous consequences of the Phariseeism which winked at the shameless theft of French plays while insisting upon their purification. Poor Mr. Tom Taylor is handled with a contempt which, in his capacity of adapter, he richly deserves, and the ingenious Mr. Boucicault, whose Irish dramas are treated with notable acumen and felicity, is neatly catalogued as "plagiarism incarnate." From the consideration of these and kindred authors, M. Filon proceeds naturally to the subject of British burlesque, a monstrosity of which even Englishmen are ashamed. It does not merit even the contemptuous notice which he bestows upon it, but it was, perhaps, worth while to point out that it has lowered the public standard of decency by its license in the matter of provocative female costume.

But the prevailing note of M. Filon's book is not one of disparagement. On the contrary, he is far more sanguine concerning the future of English comedy—the possibility of future English tragedy does not seem to occur to him—than most contemporary critics. He recognizes the existence and gradual, though halting, development of a representative modern English drama—a noteworthy admission from a writer of his nationality and authority—and traces its origin to the production of the Robertsonian plays by the Bancrofts at the little Prince of Wales's Theatre. He is as wide awake as anybody to the patent defects of what has been called the "cup and saucer" comedy, but, with characteristic discrimination, attaches far more importance to the fundamental truth of individual personages and scenes and the essentially national qualities of the humor. His analysis of "Caste," "Society," "School," and "Ours" is admirable, and he points out, rather mischievously, the revolution which prosperity effected in Robertson's social theories. His chapter about the Grub Street Bohemia of those days, of which the younger Hood, Robert Brough, H. J. Byron, W. S. Gilbert, and Robertson himself were among the principal denizens, is delightful.

One of the most brilliant essays in the volume treats of the work of W. S. Gilbert. It is brimful of the shrewdest analysis and the frankest admiration of that pungent writer's varied abilities, without ever losing sight of his limitations. The criticism of his earlier plays is singularly acute, and the appreciation of that fantastic vein in which he has won his most enduring successes uncommonly keen. No element of the Gilbertian humor, except, perhaps, the peculiar phase of it which finds its amplest expression in "Patience," has escaped him. The concluding sentence in which he sums up his subject deserves quotation. Mr. Gilbert, he writes, has "remained a lawyer all his life, by his professional scepticism, by the variety of his dialectical resources, by his proneness to subtle distinctions and interpretations, by his cleverness in setting up appearances against realities, and words against ideas, but, above all, by his curious faculty for losing good cases and winning bad ones."

The career of Sir Henry Irving is followed with similar perspicuity. It is scarcely too much to say that no juster estimate of the great English actor and manager has ever been printed than that of M. Filon. Everybody will not agree with all that he says of Sir Henry's Shaksperian impersonations, but on the main issue he will encounter few dissenters. Some of his descriptive touches are veritable strokes of genius, as, for instance, when, in speaking of Irving's sympathy with mediæval and ecclesiastical asceticism, he remarks that no other man could have played *Becket* so well as he, with the possible exception of Cardinal Manning. His whole study of the growth of the man, intellectually and histrionically, from the period of "The Two Roses" to the present day, and of the beneficent influence which he has exerted upon his profession, is at once vivid and exhaustive. His final verdict is that Sir Henry must be accepted as the leader, not only of the English, but the European stage.

The closing essays in the book are devoted to a rapid comparative review of the serious or semi-serious playwrights of the last quarter of a century. The most noticeable feature in them is the high place accorded to Tennyson, not only as a poet, but as the possessor of real dramatic inspiration. M. Filon is much too good a critic to confound the theatrical cleverness of a mere designer of situations with the genius that comprehends the soul of a period and the depths of human passions. He draws a subtile but obviously true distinction between the "critical faculty of the historian and the gift of living over again in imagination the emotions of a century long gone to dust," and illustrates his point by citing Michelet, Macaulay, and Carlyle of the one sort, against Holinshed and Lytton of the other. To enforce his argument he quotes scenes from "The Cup," "Harold," and "Queen Mary," and asserts that Tennyson has been deprived of his proper place among the dramatists by the lack of actors capable of interpreting him. After such bold, clear, and forcible criticism as this, it is rather disappointing to find him ranking Mr. Henry Arthur Jones among the pioneers of the new dramatic era, but it is only fair to assume that in this instance his judgment may have been affected by personal friendship. At all events, the name of Mr. Jones appears at the end of an eminently characteristic and bumptious preface. The sections on the plays of Messrs. Pinero and Grundy are much more acute and judicious, and bring into strong relief the differences between the intellectual and artistic processes of the two men.

Being a professed realist—as he undoubtedly is, after the fashion of the Irishman who remarked that he was a teetotaler, but not a bigoted one—M. Filon is a stanch admirer of Ibsen. In this respect he is clearly a docile pupil of Mr. Archer, whose arguments he reproduces in paraphrase. These are familiar, and need no present discussion. But M. Filon raises the point that the secret of the Norwegian's influence upon the English stage is to be sought in the similarity of the characteristics of the Northern races. Undoubtedly there is such similarity of racial instincts, but it would be as well to demonstrate the existence of the influence before trying to account for it. As a matter of fact, Ibsen in England is still "caviare to the general." Moreover, if it be true that his dramatic personages are Scandinavian types, may it not also be true that, except when they are abnormal, they are universal types, or, in other words, utterly conventional? But the social-problem drama, happily, is already at its last gasp, and its ghost may be allowed to pass without further vexation. The fact remains that M. Filon, who wrote these essays for his countrymen, has furnished them with a charming and instructive book, and that Mr. Whyte has translated it with conspicuous brilliancy, achieving the difficult task of suggesting in the English idiom the snap and sparkle of the French style.

The Central Italian Painters of the Renaissance. By Bernhard Berenson. Putnams. 1897.

Under the above title Mr. Berenson continues the series of small but important books which already includes studies of the painters of Venice and of Florence, and which is to include at least one more volume devoted to the painters of northern Italy. The present volume shows all the qualities—the ingenuity, the subtlety of reasoning, and the wide range and thoroughness of knowledge—which mark the author's work, and make him a person to be reckoned with in all future criticism. His main contention here is, that as the Florentines were preëminently draughtsmen and the Venetians preëminently colorists, so the painters of central Italy, from Duccio of Siena to Raphael of Urbino, were above all illustrators and what he calls "space-composers," and, saving exceptions, of whom Simone Martini as colorist, and Luca Signorelli as draughtsman, are the most important, drew or colored only as well as was absolutely necessary to their end, or as well as they were taught by outside influences.

Mr. Berenson always deals largely in psychology, and here it is difficult for the mere artist or art critic to follow him. His identification of the "religious emotion" in art as the "feeling of oneness with the universe" which is evoked in the spectator when the sense of space is conveyed to him, may or may not be sound psychology, but it is certainly ingenious, and serves for an explanation of the paradox that Perugino, the atheist, is always reckoned among the great religious painters. Every one has felt the charm of the serenely spacious backgrounds of the Umbrian "purists," and when we are told that the religious emotion which these pictures evoke is caused by these very backgrounds, we are set wondering if this may not be the truth, in spite of the technical language in which it is set forth. Is not the sense of space perhaps the nearest thing to a sense of infinity which art can convey, and is not the sense of infinity very nearly what we mean by religious emotion?

Mr. Berenson's division of the elements of art into "Illustration" and "Decoration" is more readily comprehensible, though he uses either word in a sense somewhat different from and broader than that to which we have been accustomed. Illustration is, for him, everything in art which is not purely artistic—everything which depends on "the value the thing represented has elsewhere, whether in the world outside, or in the mind within"—thus including beauty itself, and placing "realism" and "idealism" side by side as merely illustration; while Decoration is made to include not only composition and those qualities of color and chiaroscuro which we have all felt to be "orchestral" or musical and independent of imitation, but also the great qualities of form and movement—the significant drawing of the Florentines—which Mr. Berenson considers also directly to affect the mind and senses of the observer without regard to the intrinsic in-

terest of the objects represented. Of these two great elements of art, the illustrative and the decorative, the illustrative is the one that surely appeals to the average mind; but as it is dependent on the value to the mind of things outside the work of art itself, it is subject to changes of taste and interest. Decoration, on the other hand, exists for itself, and is always equally interesting to those who can perceive it. Hence the illustrators who have represented what no longer interests us are dead, and, except by a few, Duccio is forgotten while Giotto lives. But the illustrators who represent our own ideals and our own world are hugely popular, and Perugino and, above all, Raphael, whom we still understand, are the most loved of painters, while hosts of moderns whose art as such is contemptible exist only because they represent what we care to have shown us. Raphael was the greatest illustrator in all art, hence his popularity. He was also the greatest master of composition that ever lived, hence the profound admiration for him of the few artists to whom that part of the purely artistic side of art seems most important. Mr. Berenson would add that he was the greatest master of space in the history of painting, hence his appeal to the religious. By dint of diligent study of the work of others, he arrived at fine drawing and fine color; but in these lines he was not a creator, and is therefore less sympathetic to most painters than the great Florentines or the great Venetians.

Besides the analysis of central Italian painting, certainly most worthy of attention, which we have thus tried to condense, the volume contains, as do the others of the series, an "Index to the works" of the principal painters of the school. This is, as usual, most valuable, and renders a service to Raphael in relieving him of a number of pictures and frescoes, really almost entirely the work of his pupils, which have inflicted much damage upon his artistic fame almost from his own day to this. Perhaps the attribution which will awaken most dissent is that of the "Sposalizio" at Caen, hitherto universally attributed to Perugino, to Lo Spagna. In an article in the *Gazette des Beaux-Arts* Mr. Berenson has given his reasons for maintaining not only that the picture is not by Perugino, but that it is the copy rather than the original of Raphael's celebrated picture of the same title.

The Old Santa Fé Trail: The Story of a Great Highway. By Col. Henry Inman. Macmillan. 1897. Pp. xviii, 493, plates, cuts, and map.

This book is dedicated to and prefaced by "Buffalo Bill" (W. F. Cody), but the author introduces it to us with some of the wildest statements we have ever heard concerning early Spanish explorers. In the following chapters i. and ii. the founding of Santa Fé is treated with similar looseness, both topographically and chronologically. The American trade doubtless began with Lalande and Pursley, who were before Pike in crossing the plains to Santa Fé, as stated; but where is the evidence that they followed what we understand by the Santa Fé Trail, which was not opened until many years afterwards? Our perplexities increase when we next find Ezekiel Williams lugged in on the strength of Coyner's apocryphal if not mythical 'Lost Trappers.' The author puts him also on the Old Trail, though he is started for the upper Missouri and Yellowstone, fetched down the Arkansas, and thus spirited over an immense extent of country. The "Old Trail" must have been as broad as the plains themselves, if anything like this is what the author means by the name; and nowhere in the book is what historians and geographers know as the Santa Fé caravan route traced in its entirety, as surely we had a right to expect. It is touched upon only here and there, in places known to the author personally, with precision and particularity. It is true that Col. Inman gives us a map of the Trail, but this is too small and slight to convey much more than what everybody knew before, namely, that the road went from Missouri through Kansas to the Arkansas near Great Bend, and up the river; then split at Cimarron Crossing, the most direct route being along the Cimarron to the Canadian and so on into the mountains, the other continuing up the Arkansas to Bent's Fort, thence through Raton Pass, etc. The latter branch became the stage route of later days, and is approximately followed by the railroad. The map, moreover, does not always coincide with the text, nor the text with itself. For example, Chouteau's Island is "on the boundary line of United States and Mexico" (Kansas-Colorado border), on p. 40; "not far from" Cimarron, Kan., on p. 42, but well over into Colorado on the map, thus agreeing with p. 75, where it is fixed "at the mouth of Sand Creek" (the present Big Sandy); p. 483 locates Fort Aubrey at Kendall, Hamilton County, Kas., but the map puts Fort Aubry in Colorado. The map starts the Trail from Leavenworth, Kan.; nothing is easier than to reach the Trail from that point, but the Trail started from Independence, Mo. Where Col. Inman is not obviously wrong he needs confirmation to convince us he is right; we shall continue to turn to such old standbys as Gregg's 'Commerce of the Prairie,' and recover the Santa Fé Trail in terms of modern geography by means of the 1895 edition of Pike's Travels, where the route through Kansas is traced in minute detail.

Our criticism of Col. Inman as historian and geographer is so serious that we are glad to end it in such particulars as the above. He has written a most readable and entertaining book, full of incident to the wild life of the plainsman and the mountaineer, in contact and usually in conflict with the Indian. He is a companionable raconteur; stories of adventure lose nothing in his telling, and possibly gain something in dramatic force. The writer is an old soldier who entered the army in 1857, soon rose from the ranks, and was repeatedly brevetted during the war. He served and has long lived amidst the scenes he describes so well, took part in some of the incidents he narrates, and knew personally many of the famous worthies of the early West, from Kit Carson to Buffalo Bill. They are almost an extinct type, and the biographical sketches with which the book abounds have thus more than a transient interest. The desultory style of composition, observing no sequence of events or of locations, makes it hard to say exactly where to look for the best things in the book; we may point to chapters xv. *et seq.*, where appear Uncle John Smith, Uncle Dick Wooton, Old Bill Williams, Tom Tobin, Jim Bridger, J. P. Beckwourth, the feudal if not viceregal Lucian B. Maxwell, the Bent Brothers, and their several forts. All this is good work, well worth doing, especially as the mythopoetic tendency is already operative on more than one such redoubtable individual, to transfer him from the pale of fact to the realm of romance. Col. Inman's best local color is laid on along the Great Bend of the Arkansas, and thence up to Larned, where he is evidently on familiar ground. Thereabouts he can show you the very trail in the worn earth, point to the prosy corral in the place where once rose the famous Pawnee Rock, and tell you, as you look at the site of Fort Zarah from a Pullman car, that it was named for the youngest son of Major-General Curtis, "who was killed by guerillas somewhere south of Fort Scott, Kansas." It is in just such things as this that the value—the strictly limited value—of the book consists. Even such a simple statement as this is vitiated by the "somewhere," to the grief of the fact-hunter, though perhaps to the joy of the idle story-reader. Why not have said that he was Major-General Henry Z. Curtis, killed in action at Baxter's Spring, Kan., October 5, 1863, and saved us the trouble of looking him up in Heitman's Register?

But we promised to have done with serious criticism of something that is best taken for what it is worth, as camp-fire story-telling. A pretty full table of contents atones to some extent for a trifling index; the chapters have taking head- and tail-pieces, some of which are fair portraits; several stirring full-page plates serve to intensify the realism of the scenes and incidents, and the whole appearance of the book is attractive.

Lumen. By Camille Flammarion. Authorized translation by A. A. M. and R. M. Dodd, Mead & Co.

Back in the early forties a little book, scarcely more than a brochure, was published anonymously in England under the title 'The Stars and the Earth.' It was based on the astronomical fact that, owing to the progressive motion of light, an observer on the earth, or at any other point in the universe, would not see a distant planet as it was at the moment, but as it was when the light by which it was seen had left it. The time required for the light to travel from the planet to the observer might be minutes, hours or years, according to the distance. The author amused himself by showing how a being viewing the earth from one of the more distant stars could see the beginning of human history by the light that had then left the earth, and then, by rapidly approaching the latter, could see the whole course of events going on during his journey. "Omniscience, with respect to the past," he concluded, "becomes identical and *one and the same* with actual omnipresence with regard to space." The book was reprinted in Boston in 1868, with an introduction by the Rev. Thomas Hill.

This idea has been now taken up and worked out with much greater detail by Flammarion in 'Lumen,' but without mention of the English prototype of his conceit. "Lumen" is the soul of a man (a Frenchman, of course), who, after his death, in 1865, flies to the star Capella, and then, looking back to his former abode, is surprised to see King Louis XVI. being led to the scaffold once more, and the scenes of

the French Revolution reënacted before his eyes. Possessed of the power of flying to any point in the universe in a few moments, he can so place himself as to see the world as it was at any past epoch. All this he explains to a rather dull and incredulous "Quaerens," to whom he conveys much information about life in other worlds, transmigration of souls, spheres morally better developed than our own, etc. The book will entertain all readers fond of such speculations as these. Those of us who look forward to the Christian's heaven may not relish the idea of our souls passing from one to another of the curious forms of existence which Flammarion supposes on the different stars; sex being changeable, and the vegetable kingdom at one time taking the place of the animal. Lumen speaks of his life just previous to that on the earth as being in the planetary system of Virgo, where the "inhabitants are slightly inferior to ourselves," and expresses his "hope in the course of the next century to be incarnated in a world dependent on a train of Sirius," where "humanity is more beautiful than that of the earth." In his observations he expresses some curious ideas which we leave the reader to find; but we must say that with all our admiration for the "marvels of spectral analyses," we cannot agree with him in considering them of more value to mankind than "the discoveries of Columbus and of Gutenberg." His belief in a previous life is founded principally on his disbelief in the well-established fact of "intellectual heredity." The most distinct impression left by the book is that all knowledge here amounts to nothing, because we are so limited by our senses, and that eternity will be spent in studying "the domains of creation." To those who know how a Frenchman becomes one of the "Immortals," the reference to it on page 217 is very interesting.

The translation, by two ladies, is noticeably idiomatic and agreeable.

BOOKS OF THE WEEK.

HENRY HOLT & CO.,

NEW YORK AND CHICAGO,

HAVE JUST PUBLISHED:

RAMSEY'S ELEMENTARY SPANISH READER

By Prof. M. M. RAMSEY of the Columbian University. x+240 pp. 16mo, $, *net.*

Very carefully graded selections, beginning with some that are extremely easy, and including poems, six short stories and a novelette by good Spanish authors. The book is easy reading, especially so for those knowing some Latin or French. It contains a full vocabulary, and attractive illustrations, especially made for it.

BY THE SAME AUTHOR.

A TEXT BOOK OF MODERN SPANISH. $1.80, *net*

(With A. S. ROWAN) THE ISLAND OF CUBA. $1.25.

A Cheaper and Handier Edition of

GASE'S FRENCH DICTIONARY.

600+586 pages. 12mo. $1.50, *Retail.*

The Cruikshank Fairy Book.

Four Famous Stories. **I. Puss in Boots. II. Hop o' My Thumb. III. Jack and the Beanstalk. IV. Cinderella.** With 40 reproductions of the characteristic designs of George Cruikshank. 8vo, full gilt edges, covers elaborately stamped in gold on both sides, $2.00.

Readers of "The Cruikshank Fairy Book" will appreciate and value highly the charming way in which the tales are told, and their imagination will be heightened by the clever and delightful illustrations by George Cruikshank.

G. P. PUTNAM'S SONS, NEW YORK & LONDON.

The Ideal Christmas Gift.

MADE IN ENGLAND.

A Garden of Romance.

Romantic Tales of all Time. Being a collection of the best short stories of all ages and countries. Superbly printed by Ballantine. Edited by Ernest Rhys.

Large foolscap 4to, white vellum, cloth, gilt, $2.00.

There have been many anthologies of verse, here is one of prose, and that from the richest and most attractive field: that of romance. All tastes are consulted, all countries represented. From Boccaccio to Walter Scott, from Sir Thomas Mallory to Edgar Allan Poe, no important movement is neglected.

READ THESE:

"Imagination and fancy have their perfect work in these pages, and in reading them we feel ourselves to be with the Immortals."—[Speaker.

"This is a charming book, and many will be glad to possess it. . . . All such books are landmarks in literary history. They can interest the general reader, serve to improve the taste of the young and to refresh the memory of the older generation. . . . No one can read these masterpieces again without feeling glad to have them in their present form of good print, wide margins, and pretty binding. It is essentially a book to place in the hands of those who are likely to be influenced by the best examples of English story literature."—[Athenæum.

NEW YORK, THURSDAY, DECEMBER 16, 1897.

The Week.

Blow upon blow has befallen poor Mr. Dingley and his deficit since reaching Washington. Senator Aldrich's grim silence spoke volumes. It was not necessary for him to say anything; what he had publicly predicted about the failure of the Dingley bill was coming to pass. Senator Allison almost gives it up. He admits that the prospects of more revenue are gloomy, though he is willing to give Dingley a month or two more. After that—taxes! But the deadliest stroke Mr. Dingley has had to suffer is in the official estimates submitted by the Secretary of the Treasury to Congress. In them the deficit for the current fiscal year is put at $28,000,000, and that for the fiscal year 1898-'99 is estimated at $21,647,000. That is to say, after giving Mr. Dingley all the time he asks, after waiting not merely a month or two, but a year or two, the Treasury officials report that the Dingley bill is destined to heap deficit upon deficit. In the face of this report the duty of Congress is clear and imperative. It must without delay find the money to pay the Government's bills. We say nothing of the terrible retribution which will overtake the Republican party if it does not at once put its hand to this work. The question is larger than a merely partisan one. To omit to provide sufficient revenue, after the tariff is officially declared to be inadequate, is to do the country a grievous wrong.

The Dingley Deficit is not without its indirect advantages. As an instrument of chastening, its effect upon the Republican party is already apparent and gratifying. We do not hear so much about the superior genius for finance which the Republican possesses by nature. Democratic incompetence remains the awful thing it was, but it is looked upon now with a more kindly eye; a fellow-feeling makes the Republicans wondrous kind, even to the Wilson deficit, and they walk softly as those who are themselves not ignorant of sorrow and deficits. We are all fallible mortals, and the ways of Providence are mysterious. Even Mr. Dingley is not wearing his financier's aureole in public any more. All this is refreshing, as is also the sudden zeal of the Republicans for economy in public expenditure. This even reached the subject of pensions last week. Instead of loud calls for a service pension, which we surely should have heard if the revenue had not been done to death by Dingley, the House resounded with laments over the enormous sum required for pensions, and hard things were said of some of the practices which had swollen the appropriation. Mr. Cannon flatly served notice that a deficit would be inevitable, not only this year but next, unless the severest economy were observed; and he and others had bitter words for the "widders," who seem to be as pestiferous in this pension business as the elder Weller found them in general. A great many wholesome truths were uttered, and the number of "battle-scarred sutlers," as Congressman Allen called them, who rose to denounce the slanderers of the old soldier, was much smaller than usual.

One of Mr. Dingley's plaintive and apologetic statements in his speech on his own deficit in the House last Friday unconsciously betrayed the topsy-turvy condition into which our whole system of public finance has fallen. "No one," he said, "who had anything to do with providing revenue, had any idea that the appropriations would be so large." Exactly. One set of men raise the money, or try to; another set spends it. The two sets have little or no coördination, work independently, vote taxes and appropriations alike in the dark and without definite responsibility, and then are thunderstruck when the balance falls on the debit side! The system, or lack of system, is ingeniously devised to bring about that very thing. It is a method without precedent in private business—except among destined or intending bankrupts—and absolutely without a parallel in the public finance of any country better governed than Turkey. We have fallen into it partly by chance, partly by the grasping after undue power by Congressmen, and partly by our happy-go-lucky way of transacting the public business. But now that its evils are so glaringly exhibited, one would think some effort would be made to return to sanity. Apparently none will be. Down to the close of the war the taxing power in Congress was harnessed, as it should be, to the appropriating power; and an amendment to the rules of the House is all that would be necessary to restore that normal condition. But no one in Congress suggests such an amendment. All Mr. Dingley can do is to appeal to a spendthrift Congress not to be spendthrift.

The *Bulletin* of the American Iron and Steel Association is a protectionist organ which is not reassured by Mr. Dingley's prophesying of smooth things about "the surplus next year." It sharply reminds him:

> "There would have been no present anxiety about a sufficiency of revenue if Congress, when it came to consider the details of the Dingley tariff bill, had clearly recognized the fact that prices for most manufactured products have fallen in this country so low that even moderately protective duties will suffice to prevent any considerable influx of foreign manufactures; in other words, that a tariff which affords adequate protection to American industries can no longer be relied upon to supply sufficient revenue for the support of the Government unless duties for revenue only be also provided."

But this fact was clearly recognized and set forth by Secretary Carlisle in his last annual report, and also by Senator Aldrich in his speech in the Senate. The protectionist newspapers, however, cried "Traitor!" to Mr. Aldrich, and the protectionist Congressmen shut their eyes and stuffed cotton in their ears and went ahead blindly trusting to luck. To trust to luck under the Wilson bill would have been wicked, but to trust to luck under a bill which is producing less revenue than that did was to display a sublime faith in Providence. But Providence was treasuring up its vast designs, as the hymn says, and evidently one of them was to teach Mr. Dingley and his colleagues what deficits they are and what deficits they pursue.

The Washington correspondent of the *Tribune* cannot conceal his grief over "a tendency on the Democratic side to make the acquisition of Hawaii a party question." Still more depressing is the fact that many Southern Senators have "declared themselves opposed to any further territorial expansion," utterly "unmindful of Democratic traditions, which have uniformly favored the enlargement of American territory." Exactly; and how often must we point out that the party of Seward and Giddings and Sumner and Thaddeus Stevens is now standing in the shoes of the old Jingo, filibustering, and annexationist Southern ante-bellum Democracy? It is trying to follow the lead of Confederate brigadiers like Morgan in wresting Cuba from Spain and making it "American territory," as Texas was wrested from Mexico. It is also trying to clutch Hawaii, on the good old Taney Democratic doctrine that the dark-skinned natives have no rights that white men are bound to respect. This is the logical consequence of the prolongation of a party's life beyond the accomplishment of its original aims, until we listen patiently to Boss Hanna admonishing his slaves in Ohio that it doesn't matter if the party candidates do not suit them altogether; they must vote as he, the chairman of the executive committee, directs. Principles and candidates being alike indifferent, under the operation of "the organization," what wonder that "traditions" should become mixed, and that, for example, the junior Massachusetts Senator should now typify all that was evil in

the foreign policy and dreams of the former captains of the Slave Power?

There seems no reason to doubt that, if the annexation scheme shall take the shape of a bill which must pass the House, it will get no support from the Speaker. Mr. Reed has an article in the *Illustrated American* which, without once mentioning Hawaii, is really, from first to last, a strong and cogent argument against its acquisition. During a conversation with the editor upon the policy of adding more territory at present, the Speaker dropped the significant remark, "Empire can wait," and the editor asked him to elaborate the opposition thus concisely expressed to the doctrine that it is the obvious duty of our country to increase its domain. Mr. Reed first shows, by various illustrations from history, that the extension of empires in the past has seemed to plant the seeds of their decay, through the tendency to discord developed by such extension, and then applies to our own nation the lesson thus drawn, that the "source of destruction is the failure of each section of a great country to keep abreast of the others, to think the same thoughts, and to promote always the common interest." He points out that there are now vast differences between the ideas and wants of our separate regions, and that the geographical differences are real and powerful. He urges that "the great aim of a nation should be to use all the appliances for advancing knowledge, to assimilate its peoples to a common standard," and closes with an impressive warning against all annexation schemes.

There are two proposals before Congress for dealing with the seal question. One is to prohibit American citizens from taking seals in any part of the Pacific Ocean at any time. This measure, which seems likely to pass, is intended to have a moral effect; that is, to serve as a reproach to the sealers of other countries, especially those of Canada. We say to them: "Look at us. We have the same right that you have to catch seals on the high seas, but we sacrifice ourselves for the sake of preserving the herd. Now why will you not do the same?" We know what the Canadian reply will be, because we have had it before. They will say: "You kill them on land where you have a monopoly. If you want us to stop killing on the water, in order to preserve your monopoly rights on the land, give us something in exchange. We have capital and labor involved in this industry, and the men who are asked to forego it must be compensated." The other proposal, that of Mr. Johnson of Indiana, is that the seals be all killed the next time they come to the breeding islands. This looks like a shocking proposition. It has the appearance of cruelty. It is repulsive to the feeling of humane treatment of animals, and it will probably be rejected for that reason; but if we can imagine that seals have rights in the premises, it might be asked whether it is more humane to kill, say, 100,000, or whatever the number may be, at one stroke, or kill an infinite number through all future time by keeping them going. The latter method, if practicable, would be the best for the human race, since it would insure us a constant supply of sealskins, but it could not be accounted preferable on the score of humanity to the seals. Mr. Johnson's idea is a very respectable one.

Gov. Black is said to be strongly opposed to the proposal to repeal his unstarched civil-service law, but he may have to consent to it before the session of the Legislature is over. The politicians of his party, all of whom have their men in the service, are very strenuous for its repeal, since in that way alone can they prevent a complete Democratic "clean sweep" in case the Democrats secure the governorship next year. Nothing but repeal is likely to save the Republicans who are in the service in this city from removal when Tammany comes in, for with a Tammany local Civil-Service Board the city regulations will in all probability be made to conform with the Black law. Platt and Black, by opposing repeal, will find themselves in antagonism with all the politicians of their party, and will be accused not merely of turning over the State to the Democrats, but of being unwilling to allow the Boys to retain the means of subsistence. There will be a lively time in the Legislature when the question gets before it, and the Governor, as well as Platt, may conclude that surrender in advance will be advisable in order to prevent the plain speaking about their leadership which would be one of the inevitable results of a party wrangle over repeal.

We trust that it is true, as reported in the *Tribune*, that another Maryland Surety Company has made arrangements to get control of the liquor-bonding business in this city which has hitherto gone to Platt through one of his sons, and thus to deflect a valuable stream of political revenue from Platt to Croker. This is in accordance with the fitness of things. As Croker said after election, the people have decided the "right of persons affiliated with Tammany Hall to go abroad in the pursuit of health and happiness." Of course, that decision carries with it the right to raise the money with which to go. Platt has had two or three years' enjoyment of the revenues from the liquor-bonding business, and it is Croker's turn now. Turn about is fair play in politics. Then, too, the liquor-dealers must get their bonds in the place where the "pull" resides, and that has been shifted from No. 49 Broadway to Tammany Hall. Furthermore, according to Bacon, "putrefaction is more contagious before than after maturity"; and as Platt has putrefied before maturity, while Croker has matured before putrefaction, all liquor-dealers desiring health and happiness should flee from Platt and flock with Croker.

The resignation by Mr. Griggs of the office of Governor of New Jersey to accept the position of Attorney-General of the United States creates a situation in that State which is somewhat complicated, and to assist in the solution of which there is no local precedent, as, under the present Constitution, no such vacancy has ever before been filled. The Constitution of New Jersey does not provide for any Lieutenant-Governor, but directs that the duties of the Governor, when his position becomes vacant for any reason, shall devolve upon the President of the Senate. The President of the Senate in New York State is the Lieutenant-Governor, but in New Jersey the position is filled by the election of one of the Senators by the Senate itself. It is settled that Senator Voorhees of Union County will be chosen President as soon as the Senate meets. Then, on the resignation of the Governor, the duties of the latter office will devolve upon him. What will his position as a Senator henceforth be? The best legal authorities agree that he cannot unite the duties of executive and legislator—cannot, for instance, vote on and sign bills as President of the Senate which he may sign or veto as Governor. At the same time it seems to be conceded that if he should resign his senatorship, he would have no status even after entering the executive chamber as Governor. As a result, there will apparently be a vacancy in Union County's representation in the Senate, which cannot be filled until the election of 1898.

The Washington correspondent of the *Tribune* tells how the whites of South Carolina have succeeded in disfranchising, under the forms of law, almost all the black voters. A new constitution was framed in 1895, and put into effect without submission to the people, which followed the example set by Mississippi five years earlier, and required that an applicant for the suffrage, in order to enjoy the right, must be able to read any section of the Constitution, "or understand and explain it when read." This "understanding" clause was designed in each State to afford a method by which white registration officials might let in ignorant men of their own race, and at the same time keep out all blacks except those with a high degree of intelligence. The system has worked as was expected, and the South Carolina registration-books now contain

the names of about 90,000 whites out of the 99,334 of that race of the voting age, and only about 12,000 blacks out of the 132,949 men of that color above twenty-one years of age. After the 1st of January, 1898, the Constitution requires that an applicant for the suffrage shall be able to both read and write any section of the Constitution, or show that he owns and has paid taxes on property assessed as worth at least $300. Meanwhile, a registration already secured lasts for ten years, so that for the next decade nearly all the whites are assured the suffrage without any further trouble, while only 12,000 blacks now enjoy the right, and it will be very hard for others to get their names on the list.

The time has been when such a device for suppressing the bulk of the negro vote in a State where the black men outnumber the white by tens of thousands would have provoked indignant protests from the Republican party throughout the North. Orators would have denounced the outrage in Congress, and editors would have inveighed against it in the newspapers. We shall hear and read very few protests now. Most Republican Congressmen and most Republican editors will simply ignore the subject. They cannot do otherwise while they support a Republican administration in disfranchising another colored race in another part of the world. There have undoubtedly been hundreds, perhaps thousands, of cases in South Carolina where blacks as well entitled to vote as whites have been denied the right because of their color, but all such cases together do not begin to compare with the number of educated Hawaiians who have been denied all share in the government of the land where they have always lived, by a little band of white men, largely foreigners, simply because of their race.

The right to publish private letters (which the publisher has honestly acquired) against the objection of the writer, was denied by the English High Court of Justice in the recent case of Labouchere vs. Hess and Mrs. Sala. Mr. Hess, the proprietor and publisher of the *African Critic* of London, in his issue of October 5, published an article entitled "The stock-jobbing of Henry Labouchere, M. P. for Northampton and proprietor of *Truth*, and late member of the British South Africa committee." The following paragraph occurred in the article:

"I have in my possession complete proofs that Mr. Labouchere also carried on his stock-jobbing transactions in later years, and, if necessary, I shall be quite willing to publish them; but before doing so I desire to challenge Mr. Labouchere to refute, if he can, the charges already proved against him by me. This is the second day of October, 1897. I will give him until the last day of this year—*i. e.*, three months—to have 'his innings,' as his friends call it, and take such steps to vindicate his character as the aspersions I have cast upon it call for. If by December 31, 1897, he shall not have taken any such measures, I intend, beginning with my issue of January 1, 1898, to commence a series of revelations about his latter-day conduct which, I promise, will pale the exposures already made into utter insignificance."

In a subsequent article Mr. Hess indicated that there would be included in his second batch a letter written by Mr. Labouchere showing why he (Mr. L.) "considers Jews good jurymen." This letter Mr. Labouchere was able to identify as one that he wrote a long time ago to the late George Augustus Sala, who died in 1895. He found upon inquiry that the wife of Mr. Sala had received his correspondence as a gift from her husband, and had sold it, or a portion of it, to Mr. Hess for money, applying the proceeds to her husband's benefit during his last illness.

Mr. Labouchere applied to the court for an order to restrain both Mr. Hess and Mrs. Sala from publishing the letter in question, or any others written by him to Mr. Sala. The defendant (Hess) contended that Mr. Labouchere had published what purported to be a letter written by him (Hess) which had been taken from the records of a lawsuit in the Transvaal. The court held that that fact did not warrant the threatened publication of Labouchere's letter to Sala, since it might have been shown to be a justifiable publication if the case had been brought to trial with witnesses, etc. The defendant contended also that he had a right to publish letters for the purpose of defending his own character. This the court was disposed to concede, but held that the publication of these letters was avowedly for a different purpose, namely, to blacken the character of Mr. Labouchere. The injunction to restrain the publication was then granted. His Lordship, in rendering his decision, referred to what he had understood to be a suggestion that the injunction, if granted, could be evaded by getting some one else to publish the letters. He remarked that Mr. Hess and his friends would stand a good chance of finding themselves in Halloway Gaol if such a course was adopted, and said he would add to the injunction words expressly prohibiting any improper use of the letters. Nor must Mrs. Sala publish any without Mr. Labouchere's consent.

The frank speech of Herr von Bülow, the German Minister of Foreign Affairs, in the Reichstag on Monday week, effectually dispels any slight haze of uncertainty that may have heretofore obscured the purpose of the recent German occupation of Kiao-Chau Bay, which was ostensibly provoked by the murder of the missionaries Nies and Hennie. Crimes of this character are unfortunately of sufficiently frequent occurrence in China to afford clearly defined precedents for the course to be taken in like cases by the particular nationality whose subjects are concerned; the usual redress demanded being the punishment of the culpable and the infliction of a money fine, and these remedies being ordinarily adequately enforced through the menacing presence of a single gunboat at the appropriate time and place. When, therefore, without any previous demand upon the Chinese authorities, Admiral von Diederich appeared with his large force, and planted the German flag on the Kiao-Chau fortifications, it became apparent that the usual precedents were to be disregarded, and that some motive more potent than a desire for the customary redress was latent in the proceedings, especially when these were speedily followed by the despatch of an auxiliary German fleet under Prince Henry, the Emperor's brother.

Some alarmed and puzzled observers of other nationalities, whose interests in Far Eastern matters may thus have been impinged upon, affect to see in this highly significant movement of the Germans merely a temporary occupancy of Chinese territory designed to aid the Emperor in his cherished, but hitherto obstructed, plans for securing naval expansion; as a lever, in short, with which to facilitate him in what New Yorkers would know as "jamming through" the appropriation bills in the Reichstag. It would now seem that consolatory suggestion of this sort is illusion, and that the Germans, being there, intend to remain, and incidentally to enlarge their territory by way of securing additional markets for the goods of the Fatherland. Indeed, late advices indicate that the German forces have also occupied the town of Kiao-Chau, some eighteen miles inland, and we now have Herr von Bülow's announcement, apropos of this general business, that "the time has passed when Germany is content to look on and see other countries dividing the world among them"; when she can philosophically remain "content with a place in heaven." If the Foreign Minister is correctly quoted, it is clear that Germany has grown tired of watching and waiting upon the successful aggressions of others of the Powers in the unfortunate Middle Kingdom, and seeks to forestall whatever comprehensive grab of its territory Russia, England, France, and the new Japan may possibly have in contemplation. Aside from any question of sentiment, the business sympathy of Americans should be with the English in these gathering complications in the Far East. The English alone of the various nationalities concerned throw open any acquired territory to the free commerce of the world, while the Germans, Russians, and French take with them everywhere the odious barrier of a purposely exclusive tariff.

THE MOMENTOUS DECISION.

In discussing the Hawaiian matter from the military or naval point of view, we must remember that the islands are sought as "the key to the Pacific," and that no island can be a "key" without a navy. A navy is to an island what a lock is to a key. Nobody values a key without a corresponding lock, and so, also, an island is for military purposes of no use to a Power which has no navy to defend it. For this reason it would be ludicrous for Great Britain to keep Gibraltar or Malta or the West Indian Islands if she had no navy to protect them. Without a large navy—double that of any other Power—she would hold them at the mercy of any country with a large navy with which she went to war, for that country would immediately attack her outlying possessions, knowing she could not defend them.

This is exactly our case. Taking Hawaii, we at once come into possession of the only outlying territory we have ever had, the only spot of our dominion which a foreign navy could attack with any chance of success. Our coasts we can defend; a landing on them for purposes of conquest, or for anything but destruction, would be absurd. But the minute we acquired an island 2,000 miles from our shores, the enemy's ships would start for it, not because the island was very valuable, but just to humiliate and discourage us, and get at the missionaries and their wealth. We could keep it only by a naval battle, and if we lost the battle, we should lose both our navy and "the key," for men-of-war in these days do not run away when defeated—they simply go to the bottom. Our coasts could then be freely ravaged by the enemy, and shells thrown into our cities, for the navy would not only have to be large enough to defend the island, but to leave a portion behind to watch over our coasting trade and our coasts.

That we shall ever have such a navy is very unlikely. Congress is Jingo by fits and starts. Sometimes it wants a navy and sometimes it does not. It is apt to be frightened by cost when dealing with matters for which there is no pressing necessity, and it is in the highest degree unlikely that it would go on, year after year, maintaining an enormous armament for the security of a group of islands so far away, and inhabited mainly by "dagoes" and "niggers" and sugar men. Hear what Captain Mahan said in this regard four years ago in the *Forum:*

"There is, however, one caution to be given from that military point of view beyond the need of which the world has not yet passed. Military positions, fortified posts, by land or by sea, however strong or admirably situated, do not by themselves confer control. People often say that such an island or harbor will give control of such a body of water. It is an utter, deplorable, ruinous mistake. The phrase may indeed by some be used only loosely, without forgetting other implied conditions of adequate protection and adequate navies; but the confidence of our own nation in its native strength, and its indifference to the defence of its ports and the sufficiency of its fleet, give reason to fear that the full consequences of a forward step may not be soberly weighed. Napoleon, who knew better, once talked this way. 'The islands of San Pietro, Corfu, and Malta,' he wrote, 'will make us masters of the whole Mediterranean.' Vain boast! Within one year Corfu, in two years Malta, were rent away from the state that could not support them by its ships. Nay, more; had Bonaparte not taken the latter stronghold out of the hands of its degenerate but innocuous government, that citadel of the Mediterranean would perhaps —would probably—*never have passed into those of his chief enemy.* There is here also a lesson for us."

Our position is and always has been considered unusually happy, in being a solid block of thickly peopled land like Russia, which no foreign enemy can get at. Our eagerness, therefore, to be vulnerable, to expose points of attack to invaders, is considered, and is, a singular fancy. The truth is, that the case is one of the many in which delusion is wrought by words. The phrase "key of the Pacific" was started by naval strategists in a scientific way, on the hypothesis that we should have a large navy, just as books like Jomini's on the art of war are written for nations having a large army. They are written for France, and Germany, and Russia, and Austria; not for Holland or Sweden. We have a school of very able naval strategists, on our part, who must, in order to make their demonstrations clear, assume the existence of a big navy, and a greedy, expansive foreign policy. These are as necessary to them as figures to a geometrician. In their mouths the phrase "key to the Pacific" has a definite meaning, but it lies in their imagination. As might have been expected, it has been seized hold of by Congressmen, without the smallest comprehension of its bearing, to help them in either hurling defiance at Great Britain or in passing naval appropriations.

In his article on "Hawaii and Our Future Sea Power," from which we have just quoted, Capt. Mahan further says:

"The United States finds itself compelled to answer a question—to make a decision—not unlike and not less momentous than that required of the Roman Senate when the Mamertine garrison invited it to occupy Messina, and so to abandon the hitherto traditional policy which had confined the expansion of Rome to the Italian peninsula."

And again:

"This is no mere question of a particular act, but of a principle, a policy, fruitful of many future acts, to enter upon which, in the fulness of our national progress, the time has now arrived. The principle accepted, the annexation of Hawaii would be no mere sporadic effort, irrational because disconnected from an adequate motive, but a first fruit and a token that the nation in its evolution has aroused itself to the necessity of carrying its life—that has been the happiness of those under its influence—beyond the borders that have heretofore sufficed for its activities."

That is precisely the way to put it. "This is no mere question of a particular act, but of a principle, a policy, fruitful of many future acts." As such it is as important as anything which has occurred in the United States since the adoption of the federal Constitution, and as such it ought to be debated. Considering this, the way in which the subject has been for four years left in the hands of sugar and other speculators, and bandied about as a means of making money for a few sons of missionaries, of keeping England out of an island, of curing lewdness and heathenism, and of securing a lockless "key," is certainly very odd.

At last the promoters have again laid the old treaty, drawn by themselves, before the body selected by themselves, to be "jammed through" in the manner approved by themselves. Having secured the concurrence of the President, for reasons which are marked by the same evasion and concealment of the real facts of the case, and the same word-play that have characterized the whole transaction, they evidently expected to slip it through the Senate without debate. They have failed, and now, characteristically, they are going to try a party vote in both houses, which would enable them to gain their ends by a mere majority. Like Steve Elkins, when trying to make money for "America," they leave no stone unturned.

We think it likely they will fail again, because Congress is becoming more and more aware of the gravity of the scheme. Capt. Mahan has laid it perfectly bare. His illustration from the history of Rome is most apposite. When the Senate directed the Consul to occupy Messina, it launched Rome on a new career, which was to build up the Roman empire, but it sealed the fate of Roman republicanism. The age of Cato, and Scipio, and Gracchus, the age of liberty and law, had come to an end. The age of Marius, and Sylla, and Pompey, and Cæsar, and Augustus, and Caligula had been entered on. The Empire had begun. As soon as provinces began to be acquired by conquest or fraud, the rule of the people ceased, and the oligarchical Senate took charge. The Senate had not been long in charge before the "princeps," or "boss," made his appearance, and told it what laws to pass and how the sham offices should be filled. And the princeps had not been long in command before the soldiers who won and held the provinces, made their appearance and put his office up at auction. And then, in another brief period, the whole fabric built up by so much valor and ambition and love of "expansion," fell into hideous ruin. If it does not point a moral as well as adorn a tale, no event of human history is fitted to do so.

Most of those who are pushing the Hawaiian scheme are simply after what our aldermen call "the stuff." Capt. Mahan gives some of them credit for wishing to carry our life, that has been the happiness of those under our influ-

ence, beyond the borders that have hitherto sufficed for our activities. But he makes a great mistake in supposing that the diffusion of our happiness is any part of their programme. Moreover, although our borders have hitherto sufficed for our activities, unhappily our activities have not sufficed for our borders. We have still a large territory uninhabited, a large population imperfectly civilized or instructed, our new and growing commercial and manufacturing life poorly regulated, our system of taxation unsettled, our old religion half gone, with nothing new to take its place, great political corruption, widespread indifference to the duties of citizenship, no enlightened municipal government. We have none of the old Roman traditions which made the state an object of worship. In fact, for us to start on a career of conquest and annexation of populations to whom we should be compelled to deny the *jus suffragii* from the outset, would be to invite the destruction of this republic at an early date; in other words, the complete failure of "the great experiment."

Moreover, we are under the most solemn obligations to the civilized world not to diffuse our "happiness" or our "life" among other people in the old way. We have for one hundred years made known to all mankind, by every means in our power, that we proposed no annexation by conquest or violence, that we wanted no subject populations, that when we spread we meant to spread, not as Rome spread and as England has spread, through guns and trumpets and over mangled bodies, but through knowledge and trade, and law and liberty, and brotherly kindness; that no other modes of expansion were known to us, and that we were sure none other could bring permanent peace and prosperity. This was the wisdom of the founders of this government. A century of growth has cast no discredit on it, and given us no reason to doubt it. It is still our boast; and in spite of all Jingoes, missionaries, and expansionists, we firmly believe another century will show that they pointed out the true road to glory.

THE SAN DOMINGO PRECEDENT.

Hawaii is now offered to the United States by a government which does not rest upon the consent of the Hawaiian people, which owes its origin to a revolution against the government established by the natives—a revolution that would have failed but for the support of the United States Navy. In like manner, San Domingo was offered to the United States nearly thirty years ago by a President who had usurped the position, whose power was constantly threatened by a rival with better claims to the office, and who was assured the possession of his place only by the presence in the neighboring waters of United States men-of-war. For the time being, the navy of the United States was the navy of Baez, and a despatch from Commodore Green, July 21, 1870, stated that without the support of our ships of war he could not have maintained himself against his own people and would have been obliged to leave the island. Except that Grant's Secretary, Babcock, went a little further in 1870 than Minister Stevens did at Honolulu in 1893, the analogy between the two cases is complete.

The arguments then urged for the acquisition of San Domingo are so nearly identical with those employed in the case of Hawaii now that one needs only to substitute Pacific for Atlantic and make a few similar verbal changes to use President Grant's special message of March 23, 1870, again to-day. San Domingo was desirable "because of its geographical position." It "commands the entrance" to the Caribbean Sea and the isthmus transit of commerce. "Its possession by us will, in a few years, build up a coastwise commerce of immense magnitude," and give us "a controlling influence over the great commercial traffic soon to flow from east to west by way of the Isthmus of Darien." "In case of foreign war it will give us command" of all the West India Islands.

There was the same claim, in defiance of all the facts, that the people of the region which it was proposed to seize, favored the surrender of their land to another Power. "The Government of San Domingo," said Gen. Grant in 1870, "has voluntarily sought this annexation"—that government being one which depended upon the presence of United States vessels for its very existence. "The treaty was unanimously ratified by the Senate and President of the republic of Hawaii," says Mr. McKinley in 1897—this so-called "republic" allowing only 3,000 people to vote, of whom most are foreigners, while a protest against annexation is presented to the United States Senate which is signed by 10,809 men and 10,300 women of the Hawaiian race.

There was the same claim in 1870 as in 1897 that the country in question was too weak to stand alone, and that the United States must take possession to save it from itself. "It is a weak Power," said Gen. Grant, "numbering probably less than 120,000 souls [Hawaii has about 109,000], and yet possessing one of the richest territories under the sun, capable of supporting a population of ten million of people in luxury. The people of San Domingo are not capable of maintaining themselves in their present condition."

There was the same bugbear of foreign aggression in 1870 as in 1897. Gen. Grant declared that the weak people of San Domingo "must look for outside support," and added:

> "They yearn for the protection of our free institutions and laws, our progress and civilization. Shall we refuse them? I have information, which I believe reliable, that a European Power stands ready now to offer $2,000,000 for the possession of Samana Bay alone, if refused by us. With what grace can we prevent a foreign Power from attempting to secure the prize?"

There was the same proud humanitarian appeal in favor of seizure in 1870 as in 1897. Gen. Grant urged that we should take San Domingo because "Porto Rico and Cuba will have to abolish slavery as a measure of self-preservation to retain their laborers"; saying later that the act would "make slavery insupportable in Cuba and Porto Rico at once, and ultimately so in Brazil."

The San Domingo scheme of 1870 failed, and there is not a thoughtful American in 1897 but rejoices that it failed. None of the threatened evils of failure has happened. The people of San Domingo got rid of Baez not long after the United States war-ships were withdrawn from his support, and have maintained themselves ever since quite as well as before. No European Power has ever so much as offered to take Samana Bay. Slavery was abolished in Cuba, Porto Rico, and Brazil many years ago, without the necessity of our possessing San Domingo. Best of all, the American republic escaped the eternal disgrace which would have rested upon it if Congress had not heeded the eloquent protest of Charles Sumner in the Senate of the United States on the 21st of December, 1870:

> "Vain to set forth, as the President's message does, all manner of advantages, 'commercially and materially.' What are these if Justice and Humanity are sacrificed? What are these without that priceless blessing, Peace? I am not insensible to the commercial and material prosperity of my country. But there is something above these. It is the honor and good name of the republic, now darkened by an act of wrong. If this territory, so much coveted by the President, were infinitely more valuable than it is, I hope the Senate would not be tempted to obtain it by trampling on the weak and humble. Admit all that the advocates of the present scheme assert with regard to the resources of this territory, and then imagine its lofty mountains bursting with the precious metals, its streams flowing with amber over silver sands, where every field is a garden of the Hesperides, blooming with vegetable gold, and all this is not worth the price we are now called to pay.
>
> "I protest against it in the name of Justice outraged by violence; in the name of Humanity insulted; in the name of the weak, trodden down; in the name of Peace imperilled, and in the name of the African race, whose first effort at Independence is rudely assailed."

Nor was Mr. Sumner the only New England Senator to give voice to this righteous feeling. Mr. Morrill of Vermont, who still survives to oppose ill-judged schemes of annexation, stood with his Massachusetts colleague in arguing against even the proposition to send a commission to San Domingo, nominally to investigate, but really to report in favor of the scheme. On the 20th of December, 1870, Mr. Morrill delivered a brief but vigorous speech

on the question, in the course of which he said:

"And now it is proposed to initiate a step here that shall bind us to surrender and abandon all of these documents in the Library of Congress, the fruit of vast research for years, to an impromptu commission that shall go down there without any compensation, stay there no longer than they may find it pleasurable to themselves to stay; and then we are to have the final action of both houses of Congress upon a joint resolution for the annexation of San Domingo as a State, which contains but 125,000 people at most to-day, and confessedly illiterate and incompetent to take the charge of any State government whatever. So swiftly are we to have a State equal in power to any one of the original thirteen of which this Union was at first composed. Regarding this measure as one unwise and calculated to inflict vast injury upon my country, I shall oppose it at the threshold. I have never yet seen any experienced legislator that did not meet a question like this at the threshold."

That Sumner and Morrill were sustained by the people of New England appears clearly from a great mass of contemporaneous evidence. Joseph R. Hawley, who had then lately retired from the governorship of Connecticut, and is now a Senator from that State, wrote to Mr. Sumner from Hartford, after a speech on the subject delivered by the latter in executive session, March 23, 1870:

"What little I see concerning your speech on San Domingo greatly pleases me. The course of the Government for several years in these matters is demoralizing and dangerous. I would not have an administration negotiate an acquisition in time of peace without the previous consent of Congress. *We don't want any of those islands just yet, with their mongrel, cut-throat races and foreign languages and religion.*"

Popular support of the San Domingo job twenty-seven years ago was as conspicuously lacking as of the Hawaiian job to-day. Here and there a Republican organ, which either was in sympathy with the ring of speculators and adventurers who cooked up the scheme, or which felt compelled to sustain the Grant Administration through thick and thin, favored it; but Sumner's colleague, Henry Wilson, who voted for it only to avoid a rupture with the President, confessed that nine-tenths of his constituents were opposed to it; and when a popular demonstration was attempted in this city, the managers had to fall back upon the Collector of the Port for chairman, and could summon no speakers who carried greater weight than Congressmen Banks of Massachusetts and Fitch of Nevada.

COMMERCE AND BIG GUNS.

The notion that "commerce follows the flag" is of American or perhaps English origin, but it finds its stoutest advocates at the present moment in Berlin and among those who are demanding a great increase in the German navy. In the Reichstag on Thursday, Herr Hammacher, one of the National Liberals, gave his reasons for thinking that a large navy is necessary, saying:

"The most important thing is the policy of England and the United States. England's policy is evidently directed towards the formation of a Zollverein with her colonies. The United States also undoubtedly wish to protect themselves against our exports, but matters are coming to such a pass that other American republics are joining the United States in order to form a Zollverein. Pan-Americanism is for Germany still more momentous than Monroeism. The United States are not to be considered on the same footing as a single European state, but rather as an entire continent, with regard to production; and my opinion, which is shared by eminent statesmen and has also been expressed recently by Count Goluchowski, is that European states in the coming century will be obliged to coöperate in order to support each other in this struggle for existence with America. Germany alone would be powerless in the conflict, but we must take care that when the hour comes she is in a position to take her part."

This speech presents broadly the conception that commerce is gained, or at all events preserved, at the cannon's mouth, and not by offering one's goods of superior quality or at lower price than one's competitors. The allusion to England and her policy is rather malapropos, since that is the only country in the wide world that offers no obstacles to foreigners who may desire to trade with her or her colonies. Although she has the largest navy in the world, she never uses it to keep German goods out of Canada, or Australia, or India. She does not even use her influence that way. She does not believe that commerce follows the flag, but holds the contrary doctrine that the flag follows commerce, and that it does so whether big guns are carried underneath the flag, or only flour, pork, petroleum, cotton goods, oranges, and bananas.

If proof of this course of trade were needed, it might be found in the commercial marine of Norway, which is second in importance to that of Great Britain, although Norway has no navy worthy of mention. It is true that Herr Hammacher makes particular reference to England's expected policy of a Zollverein, or commercial union, with her own colonies. He cannot be unmindful of the fact that England rejected decisively the policy of a Zollverein in so far as it contemplated commercial advantages to the colonies in their trade with the mother country. But even if she were on the eve of adopting such a policy, how would it help matters for Germany to build more war-ships? Would she send a fleet to any British colony and demand entrance for German goods under penalty of bombardment at the end of eight hours? Such procedure may serve to extort an indemnity, whether right or wrong, from some country that has no means of defence, but such methods would not be resorted to in order to secure a market for German goods even in so weak a country as Hayti. That would be the surest way to cut off and destroy a market for one's goods, even if they were otherwise acceptable.

A British Zollverein is not the only ogre that troubles this German statesman. Pan-Americanism is even worse. He pictures to himself a union of the whole American continent bound together under a common pledge not to trade with Europe. Well, what would be the remedy for that condition, if it were possible? Would more war-ships and heavier guns make us fonder of European goods than we are now? On the contrary, such arguments for transatlantic commerce would simply be met with more ships and heavier guns on this side also, and in the race for naval supremacy we should prevail in the end, for two reasons: we should have the longest purse, and we should be much nearer to the scene of action. In any contest for commercial supremacy on the Western Hemisphere dependent on fighting power, we could beat Germany or any other European Power in the long run.

But where are the signs of pan-Americanism in trade and commerce? We see nothing of that sort in our present policy. We had the beginnings of it in the Wilson tariff. We then admitted wool, hides, ores, and other important products of South America free of duty, and had started on a course which really promised a great expansion of trade with the countries south of us. We have changed all that. We have put up the highest legal barriers ever known to trade with Argentina, and have erected new ones to obstruct our commerce with Mexico, Venezuela, Chili, and Peru. At latest advices, Argentina was studying means of retaliation, and will probably find means to favor Germany at our expense without resort to any kind of artillery except that of tariffs.

The members of the Reichstag, being not exactly fools, will no doubt be able to estimate the value of Herr Hammacher's catchwords. He wants what the Emperor wants—that is, a large navy—and he employs the kind of phrases which have been effective in other times and countries to conciliate and persuade those who must foot the bills. The clear truth is that ships of war do not make markets. They do not open foreign ports. They do not create buyers. There was a time when large parts of the world were in the possession of barbarous tribes, who had no appreciation of commerce of any kind, who had neither ports nor markets. It was necessary to employ force to give civilization a foothold. After that was accomplished, there followed a certain amount of strife between civilized nations for the possession of these lands, but that has all passed away. There is still a limited use for big guns and floating batteries, but not in the business of finding buyers for one's goods. Any market that Germany can acquire with the largest possible navy, she can acquire even better without it. Her naval prowess costs money and detracts from her power to

sell cheaply. What she spends on her navy she cannot spend in cheapening the production of her goods. The same may be said of us and of any other country which cherishes the hallucination that foreigners, whether barbarous or civilized, can be made good customers by putting ourselves in readiness to blow them out of water.

FRENCH AND GERMAN COLONIZATION.

The rage for colonization which has taken possession of the French and Germans within ten years, is not unnatural in view of the spread of the British empire and the success of the British colonies. It is in some sort a revival of the conflicts for the possession of America which marked the last century, and made England cling so desperately to the English settlements on the coast. It has probably also suggested the German attempt to seize a bit of China, and, the reports say, to join in the partition of the Central Flowery Kingdom. The only part of British polity which either France or Germany, however, is competent to imitate, is the conquest of India. For the seizure and government of countries like India and China, very thickly populated and needing only order and security to continue their old life, both the French and Germans have machinery ready—that is, large armies and a host of trained officials. But it is almost certain that such countries can never be sources of profit. All England gets out of India is the salaries of a large number of English military officers and civil servants. India has been very useful in affording a field for many younger sons and well-educated middle-class youth who, within this century, have been, every year, thrown on the world to seek their fortune. England gets no revenue from the country, and is in constant danger of having it become a source of outlay. Nor does she get any revenue from any of her colonies. All she ever tried to do with them was to keep their markets for her own manufacturers, as soon as they had markets. This attempt continued down almost to the adoption of free trade, and it entailed a successful rebellion in this country, another not successful in Canada, and constant rows everywhere else. But England never had machinery, such as the Continental Powers have, for carrying out this policy thoroughly. Her political system is not adapted to it. The rights of the British subject under her own Constitution have always interfered with it, and ruined it in this country. She utterly abandoned it fifty years ago, as far as real British colonies are concerned. The last shred of it appeared two years ago, after the Tory Government came into office, in compelling India to abandon her very moderate duty on cotton goods, in order to open her markets to the Manchester men—a measure which has hardly been defended by anybody. It was just "jammed through."

For this sort of work the French and Germans are well fitted. They are very competent to regulate and castigate a huge population of an inferior race, and the Germans could probably supply a body of first-rate civil servants, as well as a large military force, for the task. The French have no civil servants who want to go abroad. They have a very large body of them in France, but they have no enterprise. They love their home and home comforts, in spite of small salaries, too well to seek fortunes elsewhere, and rely on frugality and saving and small families to make provision for children and old age. The total number of natives who emigrated in the four years ending 1893 was 37,891. Since the Revolution, in fact, the habits of the population seem to have entirely changed. The American colonies, founded by the old régime in the last century, were due in part to the readiness of the cadets of the aristocratic families to seek adventures abroad, and in part to the desire of the Church to make converts, and its great influence on the Government. But the great families are no longer potent in the state, and the Church has lost its power, and the young men of the aristocracy lounge in Paris, or, if very enterprising, write novels. The long wars of Napoleon, too, killed French enterprise. The army absorbed all the braver spirits and got rid of them on the battlefield. In addition to all this, the deaths exceed the births every year. In the one real colony, Algeria, there are only 270,000 French out of a population of 4,500,000, and, of course, a large proportion of these are soldiers and officials. There can hardly be said to be any French population elsewhere, and all efforts to promote emigration have hitherto been fruitless. So that although France claims enormous tracts of territory in Africa, and has some settlements in the East, there is not the least probability that French communities will ever grow up in them, partly because of the climate and partly for want of Frenchmen. The extension of the French area must, therefore, be mainly due to conquests, paid for by the Treasury at home, and involving prodigious loss of young life, which the country can ill spare.

The Germans have by no means so dismal a story to tell, but their efforts to colonize are nearly as futile. They have a large and increasing population and a considerable emigration, but unfortunately they will not go to German colonies. The bulk of the emigrants go to the United States and Brazil, a very few to other places, only a few hundreds to territories under the German flag The reason is very plain. They dislike conscription for the army, militarism, *lèse-majesté*, and general over-regulation. Wherever a German goes to-day under his own flag, soldiers and officials follow to provide him with government and look after his health and security. He finds himself still under paternal rule, and has to acknowledge the superiority of the "hochgeboren." Consequently, German colonization has to contend against the growing desire of mankind to manage their own affairs, vote their own taxes, and arrange their own lives. In other words, the two countries which have no conscription, no large armies, and in which men make their own government, even if it be bad government, are carrying the day and occupying all the waste places of the earth. We are colonizing this continent as fast as we can with self-governing colonies, and are showing no inclination to go to fight Spaniards and "Dagoes" for other territories which we could never occupy. We are doing on American soil exactly what the British are doing in Australia and Africa—setting up communities which decide for themselves how they will live and trade. The French and Germans are led astray by theories which some military men and Congressmen have been trying to spread among us, that markets can be made by armed conquest.

BANKRUPTCY IN THE UNITED STATES.

It seems to be thought that there is good prospect of bankruptcy legislation at Washington this winter, and this means that there is a good prospect of the passage of the Torrey bill. The so-called Nelson bill, which passed the Senate at the special session, is not a bankruptcy bill at all, as it is little more than a piece of machinery for enabling an insolvent to get a uniform discharge, good throughout the United States, which is something he cannot do now. It is consequently a bill to make insolvency easier and simpler, and the consequences of it less lasting than now. It is a bill in the interest of insolvents only, and it pleases only them and their friends in the Senate.

The essence of a bankruptcy bill such as exists in every other country, and existed for ten years after the war in this, is not that it should make an insolvent's life pleasant, but that it should be absolutely just to both creditor and debtor. For this purpose it is necessary that the creditors should have compulsory powers, extending throughout the United States, to bring the debtor who commits what are called acts of insolvency, such as failing to pay commercial paper for a certain period, into court, and force him to surrender his property for distribution. The reason why this is necessary is that otherwise the debtor, remaining in control of his property, can dispose of it in any way he pleases, saving such of his creditors as he pleases

and letting the loss fall on the others. What are called "preferences," under the State insolvent laws, are merely based on a legal recognition of the fact that as long as the law leaves a man in full control and possession of property, it cannot possibly quarrel with him for making what arrangements he pleases with it. It may be said in reply to this, that fraudulent dealing with his property is even under such circumstances forbidden, and may be avoided by creditors, and this is true; but it is very little to the purpose, because, in nine cases out of ten, the proof of fraud is wanting. Hence, in the operation of a voluntary insolvent law, it makes little difference whether preferences are allowed or not; for the debtor, before he decides to make an assignment, will take care to arrange matters so as to deal with his property as a free man, save those whom he desires to save, and, down to the last moment, not give up a cent.

This shows that the argument that a voluntary bankruptcy law (based on the model of the State insolvent laws) would be preferable to the present system if it abolished "preferences," is totally unsound. Let the bankrupt himself fix the time when he will become a bankrupt, and the astuter man of business he is, the more actual preferences and injustice will there be. Hence the compulsory or involuntary feature of the Torrey bill is the vital point on which the controversy turns. It is for this reason that the bill is the one favored by the great commercial and legal corporations and by the House of Representatives. The Nelson bill, on the other hand, has almost no support outside of Congress, and its senatorial support seems to be the result rather of a misunderstanding of the nature of its provisions than of any solid opinion. The more the matter is discussed, the more plain it will be made that, without the creditor's having the power to set the law in motion, there can be no real bankruptcy law. For the just distribution of the assets of the insolvent, his own acts must be the means of fixing him as a bankrupt, and not his own choice. At the moment when the temptation to cheat and prefer and secrete becomes operative, the law must make of the acts revealing this state of affairs proof of insolvency; the debtor is relieved of control and temptation together, the law distributes the estate among the creditors, and the upright insolvent only is discharged.

There is, consequently, no honest and intelligent opinion in the country which can be in favor of the Nelson bill. The only class which can desire it passed is that of the insolvents themselves, and the passage or failure of the Torrey bill may be regarded as a sort of rough test of whether the country likes swindling or honesty best. There are those who maintain that there is a good deal of doubt on this point, and one of their strongest arguments is that, in the three experiments hitherto tried, a uniform bankruptcy act was never allowed to remain on the statute-book longer than was necessary to give the existing body of insolvents at the time their discharge; that object accomplished, it was immediately repealed. This argument can be met only by passing another act and not repealing it.

That dishonest insolvents constitute a large and conspicuous class in the community cannot be disputed. Almost every one has a few among his acquaintances, whom he meets driving in the Park, or observes drinking champagne at Delmonico's. Where they get the means of doing this is explained from time to time in proceedings supplementary to execution, and in the pages of *Puck*. Indeed, the comic papers generally make insolvency one of the high roads to fortune, which would be impossible in a community in which dishonest insolvency was looked upon with horror. But all this does not show that the community at large wants this state of affairs to continue, or to be perpetuated in the laws when an opportunity arises for abating the evil. The swindler at large may be an amusing, yet not a beloved type. Not many years ago, the dishonest trustee was imagined by many people to be a necessary permanent type in American civilization, yet laws have been passed making misuse of trust funds crimes, punishable by heavy penalties, and a number of convictions of notorious rascals have followed, and the embezzlers are now "doing time." The passage of a bankrupt law is not hopeless; and we hold that when the debate on the subject comes off, those who advocate one should not admit that there are two or three different kinds of bankruptcy systems, on which a compromise may be arrived at, but insist upon the truth, that there is only one kind known to the law and practice of civilized nations; the principle of which is embodied in the Torrey bill.

STEVENSON AND HENLEY ON THE LONDON STAGE.

LONDON, December 1, 1897.

In England, when anybody thinks anything needs doing, a society is at once formed. No matter what it is that has to be done, whether it is a ghost to be suppressed or a social millennium established, a poet to be honored or an academy exposed, the Empire to be strengthened or dress reformed, in a society you have the Englishman's solution of all problems, his remedy for all evils. Therefore, no sooner was the stage discovered to be in a bad way—artistically, not financially—than it was inevitable that the elect should band themselves together to set it right again. Indeed, we have had one association after another devoted to the elevation of the theatre, and are threatened with as many more. There was, chief among them, the Independent Theatre, which, at last, giving up London as hopeless, has gone on tour to redeem the provinces. There will soon be a Keltic Theatre, so I am told, with poetry and the now fashionable Irish fairies as allies and Dublin as headquarters. In the meantime, the New Century Theatre is left alone to the herculean task of lifting London from the slough of musical farce and music-hall vulgarity in which it is comfortably wallowing.

This special society began its career a year ago with the performance of "John Gabriel Borkman," for, when it comes to the point, the great grievance of all self-appointed theatrical reformers is that the usual manager who wants, among other things, to make money, refuses to play Ibsen so long as the public refuses to spend money to see Ibsen played. But this year Ibsen, who, to tell the truth, has got to be something of a bore as the model playwright, has been set aside for Stevenson and Mr. Henley; and the performance of their "Admiral Guinea," a drama that concerns itself not at all with social and moral and sexual enigmas, but with sheer romance from beginning to end, is an event of no slight importance, both literary and dramatic. Its production is excellent reason for the existence of the New Century Theatre.

The play is already well known to readers, though not to playgoers. It is published in the same volume with "Deacon Brodie," which some time since had quite a little run here and in America too, and "Beau Austin," which Mr. Beerbohm Tree brought out at the Haymarket Theatre eight or nine years ago. There is more action, more movement, more sustained excitement in the "Deacon," perhaps; "Beau Austin" has more of the stateliness, the picturesque elegance that is the charm of "Prince Otto"; but, of the three, "Admiral Guinea" has always seemed to me the most complete, the most perfectly rounded out, the most poetic in sentiment and language—in a word, the play in which Mr. Henley's influence can most easily be traced, his share in the work of this "pair of friends" who once, in his words,

> "loved to chance
> Their feet in any by-way of Romance,"

can most easily be detected. The dramatis personæ are few: there are the two main figures, the "Penitent and Impenitent Thieves," as Mr. Henley calls them in the Prologue written for the performance, the "Slaver Saint," and the "Blind Pirate," the latter none other than the terrible Pew who has long haunted most of us, even as he haunted the lad Hawkins of 'Treasure Island.' There is the daughter of the Penitent Thief. There is her lover. And that is all, for the landlady of the Admiral Benbow, like the furniture of her inn, is a mere stage accessory. The plot, or story, is as simple, direct, and straightforward as possible. There is in it nothing of the problem play, for a while the mode; nothing of the play in which the action depends upon the development of character; but rather its conditions are those upheld by Dumas *père*—"four trestles, four boards, two actors, and a passion"—conditions that steer very close upon the melodramatic. Indeed, in the hands of any but artists, pure Adelphi melodrama must be the result. But in this case the authors are artists, and you have instead romance, delightful romance.

Pew and *Gaunt*, the one in the intensity of his villany, the other in the intensity of his saintliness, become two great romantic figures worthy to rank with the romantic heroes of other days—with Ulysses and Robinson Crusoe and Gil Blas, and Aramis, Porthos, and D'Artagnan. To bring the two face to face, to contrast them, is in itself an adventure; they meet, and at once "situation is animated with passion, passion clothed upon with situation," as Stevenson loved to find it in the work of other romanticists; at once a drama is created which is "so much emotion in action," as Mr. Henley defines the drama of Dumas. And, as is the central motive, so is each detail conceived in the true spirit of romance, to the very tap-tapping of the blind man, that recurs again and again, like the refrain in a ballad, and gives you the same delicious thrill of terror as when Robinson Crusoe comes upon the footprint in the desert island, or Christian passes through the Valley of the Shadow of Death. And this is only as it should be when you remember that the two dramatists are writers the secret of whose art is that they can make a romance of all things; one, the story-teller who has created for us Long John Silver, and Alan Breck, and the Master of Ballantrae, and Pew himself; the other, the poet, who, even as a child, could, by the magic of imagination, transform the quiet English town of Gloucester into the Bagdad or the Samarcand of the 'Arabian Nights.'

But, to make a work of art, something more than the romantic spirit is needed, and in "Admiral Guinea" we have this something more in the style, the beautiful prose in which it is written. The dialogue has the fine simplicity, the sonorous solemnity, almost the rhythmical swing, I might say, of Mr. Henley's verse. Take *Gaunt's* description of his last awful journey, when the hurricane came, and the negroes in the hold perished like sheep in a storm:

"For several days they were battened down; all the time we heard their cries and lamentation, but worst at the beginning; and when at last, and near dead myself, I crept below—O! some they were starved, some smothered, some dead of broken limbs; and the hold was like a lazar-house in the time of the anger of the Lord!"

Or again, his account of the effect this tragedy had upon his wife:

"She had long been dying slowly; but from the hour she heard that story the garment of the flesh began to waste and perish, the fountains of her life dried up; she faded before my face; and in two months from my landing—O Hester, Hester, would God I had died for thee!"

The play abounds in passages as stately and as musical. And, moreover, it abounds in passages that give you the clue to the philosophy of the authors—men both strong enough to love life, the mere living, to exult in it, to find it ample reward for having been born into this world of toil and suffering. There is no longing here for the poppied sleep, the end of all. *Arethusa*, her lover shown the door by her father, can still take heart: "And Kit and I both live, and both love each other; and here am I cast down! O, Arethusa, shame! And your love home from the deep seas, and loving you still; and the sun shining; and the world all full of hope?" It makes you think of Jaspar Petulengro and his philosophy of life: "There's night and day, brother, both sweet things; sun, moon, and stars, brother, all sweet things; there's likewise a wind on the heath. Life is very sweet, brother; who would wish to die?" There is another speech of *Arethusa's* in which one seems to hear distinctly the voices of Stevenson and Henley alike—Stevenson, who ever felt the zest of the game of chance with death that life was to him; Henley, who could find the poetry of living even in the hospital:

"In this world, you know—you have told me—there is nothing perfect. All we men and women have our sins, and they are a pain to those that love us; and the deeper the love, the crueller the pain. That is life; and it is life we ask, not heaven; and what matter for the pain, if only the love holds on?"

The play being the stirring romance it is, and the dialogue the rhythmical prose, need it be pointed out that none but the most accomplished actors could do justice to it?—and the accomplished actor just now is a rarity in London. But, as is the way with most of the societies working for dramatic salvation, the New Century Theatre would make its performances the opportunity for the rising young genius, as well as for the unrecognized dramatist—unrecognized, that is, by the money-making manager and the general public. "Admiral Guinea" has been intrusted to a company organized for the occasion, of whom one member alone has made a reputation—Miss Cissie Loftus, known hitherto as a pleasant music-hall mimic of other music-hall celebrities; her only qualification for the part of *Arethusa* a refinement of manner and voice which sets one to wonder how in the world it has survived her training. But refinement alone will not kindle into even the semblance of reality the girl who has love, pity, and fear to express. The young lover failed, too, from the very "breeziness" for which the critics have been busy praising him; he came fresh, not from the high seas, but from the Adelphi—a William Terriss, the Cockney's hero, in disguise, he seemed, bringing with him the unmingled atmosphere of melodrama.

But, after all, these are minor characters; it is about *Pew* and *Gaunt* that interest centres, and these two well realized, the others would matter little. But they were not well realized. Mr. Sydney Valentine struggled manfully, conscientiously, with the part of *Pew*, but in such a rôle mere conscientiousness in an actor leaves one cold. He had got himself up picturesquely, though he was not by any means the *Pew* of Treasure Island, the dreadful-looking figure hunched as if with age or weakness, in the old tattered sea-cloak with a hood that made him look positively deformed, a great green shade over his eyes and his nose. It is just possible that Mr. Valentine never heard of 'Treasure Island.' However, his appearance, differ as it might from the original, answered fairly well. The trouble was that never once could he complete for you the illusion, could he help you to see in the actor the real *Pew*, the "figure of deadly farce," the terrible *Pew* from whom all shrank instinctively; the humorous *Pew*, enjoying gayly, if grimly, his own whining "kind Christian friend," his own rich talent for lying; the inexorable *Pew*, sacrificing whatever and whoever it might be to the fury of his lusts and passions—a highwayman of the sea, with a touch of *Macaire* added. One watched unmoved that really awful scene in which the blind man, of a sudden, knows he is not alone in the room he has come to plunder, and cannot see whether it is man or ghost whose stealthy step he hears. In the written play the horror of it overwhelms you; on the stage it left the audience emotionless.

And so with the *Admiral Guinea*, as powerful a character in his way. Mr. Mollison was no less conscientious, and no more able to grasp the subtleties of the part he played. His *Admiral* was a dissenting parson, rather than the "slaver saint," with his sheaf "of humor, passion, cruelty, tyranny, life," steeped in the romance of religion as of old in the romance of his infamous trade, fierce in his struggle for salvation as for gold.

"Shadows for the boards" Mr. Henley calls his *Pew* and *Gaunt*. But shadows of these shadows the actors gave. Fine as a drama may be, it lies in the power of its interpreters to mar it, and this I think the New Century Theatre has succeeded in doing with "Admiral Guinea." Once more, as so often before, with all similar societies, it has been proved that what is lacking to-day is not the dramatist, but the actor. It has been a pleasure to see "Admiral Guinea"; it would have been a greater pleasure still had the presentment of so admirable a romantic drama not been seized as an occasion for young players to air their ambition. The reformation of the theatre has been begun at the wrong end. Good acting can save a bad play, but bad acting must ruin the best.

N. N.

CHUQUET'S NAPOLEON.

PARIS, December 2, 1897.

We may well say at the present time, what one of our great poets said in a famous ode on Napoleon:

"Lui! c'est toujours lui!"

The Napoleonic literature is increasing with an alarming rapidity; and the new historical school, which disdains no document, is finding new documents every day. One of the more prolific historians of the day is M. Arthur Chuquet; he has written no less than eleven volumes on "The Wars of the Revolution." A critic has said of him that he treats history like a pie, and gives us successive segments of it. Time was when a historian would have condensed into one or two volumes the matter contained in M. Chuquet's eleven octavos; but "nous avons changé tout cela," and have substituted the process of extension for that of condensation; we wish to have piles on piles of documents. M. Chuquet has, however, shown himself not incapable of condensation, as he has succeeded in giving a very exact and complete history of the Franco-German war ('La Guerre 1870-1871'); but this volume is probably considered by him only as a guide for future historians. Moreover, the subject was not of a nature to attract the general public very much; the present generation of Frenchmen does not return willingly to the lamentable events of what Victor Hugo called, significantly, "l'année terrible." M. Chuquet has found an attractive subject, which will allow him to begin a new series like that of "The Wars of the Revolution." He is preparing to give us a "Napoleon," and the history of Napoleon is so eventful that we cannot tell how many volumes will be necessary to exhaust the subject. We can, however, form an idea of M. Chuquet's plan by reading his first volume, the only one which has yet appeared. This volume of 494 pages is entitled 'La Jeunesse de Napoléon: Brienne.' It is

devoted entirely to the family and childhood of Napoleon and to his military education at Brienne.

M. Chuquet opens his work with a long chapter on Corsica, the character of its inhabitants, the organization of the island, its struggles with Genoa and with France. Corsica became French in 1769, after the defeat of Paoli, at the battle of Ponte-Novo, and those who remained faithful to the cause of independence were designated by the French agents by the name of banditti. Napoleon was born in the same year, 1769, on the 15th of August (the battle of Ponte-Novo was fought on the 9th of May). His father was Charles Bonaparte; his family, which was of Italian origin, was one of the oldest in Corsica; it was of noble extraction, and was recognized as such after the French conquest (the Republic of Genoa had never been willing to recognize the Corsican nobility). When Boulay de la Merthe proposed, under the Directory, the banishment of all noblemen, Tallien said that this motion would send into exile the conqueror of Italy. Charles Bonaparte was married on the 2d of June, 1764, at the age of eighteen, to Letitia Ramolino, who was probably only fourteen years old. Both were very handsome. Charles was prodigal, fond of pleasure, of luxury; he easily became reconciled to the French. Always in need of money, he spent all his energy in obtaining favors from the Government. Letitia long survived him. At the age of thirty she was still, as Napoleon said, "belle comme les amours." She always retained her Corsican accent. She was very avaricious; during the Empire, many were the stories told about her avarice. "I must put money aside; I may have, sooner or later, seven or eight sovereigns come upon my hands," is one of the phrases attributed to her at the time when she was living at the Tuileries. She saw the wood well measured in the court; forced the daughter of Lucien to go to bed early, to save fire and candles. She was of an heroic nature, and, when she visited Napoleon at Elba, and he confided to her his plans, she did not dissuade him. "Let me forget for a moment that I am your mother; go, and follow your destiny."

Napoleon resembled his mother more than his father. Taine insists much in his great work on the French Revolution on the Corsican character of the Emperor; he represents him as an Italian tyrant who had found a larger field than a small city in the Apennines. M. Chuquet, after his description of the Corsican race and an analysis of its insular character, says:

"Napoleon resembles these Corsicans of the eighteenth century. He is of small stature, has fine eyes and fine teeth. He commits no excesses of any sort; he sits at table almost with regret—a quarter of an hour, a half hour at the utmost. . . . He drinks very little and eats too fast. Very simple in his dress, he wishes to wear the uniform of an officer of his guard. He has the strong clan feeling of all the Corsicans, and becomes a benefactor to all his family. The feeling of gratitude is as strong in him as the love of revenge, the spirit of vendetta. He has the firmness and courage of the Corsicans, the Corsican gravity. Like his compatriots, he is a natural orator—his proclamations, his speeches have a sort of natural fire; but he is a soldier, he is more concise than Paoli; he does not make Latin citations, having been but an imperfect scholar, but he speaks willingly of Cincinnatus or Tarquin. 'In Italy, in Egypt,' says one of his officers, 'he constantly spoke to us of the Romans.' He is superstitious, like his compatriots; he has his 'star'; he nearly faints one day merely because he has broken Josephine's glass, and says that she must either be ill or unfaithful. He is very fond of ghost-stories and likes to tell them. He is uneasy, cannot keep quiet; he cuts all his chairs, his tables with his knife. Like a true Corsican, he looks upon women as inferior beings. He will not allow them to meddle with politics. He scandalizes Madame de Staël by telling her that the woman he prefers is the mother who has the most children. It would be difficult to reconcile his natural contempt for women with his ardent and long passion for Josephine, if love was not often quite independent of respect."

I find in M. Chuquet's volume an account of the relations of Napoleon with the famous Laplace, which well illustrates his qualities as well as his defects. Laplace had been one of his examiners at the military school in Paris, after he left Brienne.

"Laplace acquitted himself well of his delicate task. Of a sad aspect, dressed in a black coat, obliged to use a shade on account of the weakness of his eyes, his gravity was imposing and he seemed severe. He was, however, moderate, polite, kind, and, under the Empire, still kept up the ceremonious ways of the old régime. . . . When he became First Consul, Bonaparte appointed Laplace Minister of the Interior; but this eminent mathematician was, like Gaspard Monge, a mediocre administrator. . . . Napoleon made him Senator, Chancellor of the Senate, grand officer of the Legion of Honor, Count of the Empire. He took his son as artillery officer. He accepted the dedication of the 'Mécanique Céleste,' and admired the perfect clearness of the book. 'It is for me,' he said, 'a new occasion to regret that stress of circumstances forced me into a career which is so remote from the domain of science.' From Vitebsk, in 1812, he thanked Laplace for his 'Treatise on Probabilities,' one of those works which 'perfect mathematics, that first of sciences.' Laplace was a real courtier, and artfully flattered Bonaparte; he encouraged him to make the *coup d'état* of the 18th Brumaire, and he was known to be so intimate with Napoleon that he was deputed by the Senate to sound the General on his acceptance of a ten-years' consulate. On his return from Leipzig, the Emperor was cruel to the academician. 'You are changed,' said he, 'and thinner.' 'Sire,' answered Laplace, 'I have lost my daughter.' 'You are a geometer,' retorted Napoleon; 'submit this event to calculation, and you will find that it is equal to zero.' Nothing can show better the hardness, the insensibility which had been produced in Napoleon by continued wars, the exercise of supreme power, and the spectacle of the servility of men."

The new historical school—to which M. Chuquet eminently belongs, as his volume is saturated with documents of all sorts—is bound to exact truth. We should like to know on what authority M. Chuquet cites this conversation between Laplace and Napoleon, but we are left in complete ignorance on this point. To me the answer of Napoleon seems too stupid to be true; it is in such bad taste and so heartless that it is impossible to believe it, great as may have been the effect on Napoleon of the various causes mentioned by M. Chuquet to explain his change of character.

Let us return to the school at Brienne. Its pupils were all appointed on special recommendations. Bonaparte owed his appointment to the recommendation of M. de Marbeuf. His father had to produce a certificate of nobility. M. Chuquet gives details of the organization of the twelve schools of cadets which existed in France under Louis XVI. After six years of study these cadets were placed as cadets-gentilshommes in the army, and destined to fill vacancies in the sub-lieutenancies. The school at Brienne, established on the 28th of March, 1776, occupied one of the thirteen convents which the Order of the Minims possessed in Champagne; the establishment was confided to the friars, and the life of the pupils was almost conventual. Napoleon's education was severe; he was regarded by his comrades as a foreigner, did not often take part in their plays; "in his quarrels he did not always come out the conqueror. He never complained to the Minims. In his eyes the master was the enemy. He hated the despotism of the monks. . . . Masters and scholars ended by having the same antipathy for this singular child, who lived in a sort of isolation."

Napoleon remained at Brienne for six long years. His favorite study was history; he read and reread Plutarch's 'Lives,' and filled his mind with the memories of Leonidas and Dion, of Curtius and Decius, of Cato and Brutus. He left Brienne, with four of his comrades, on the 30th of October, 1784, under the guidance of a Minim, to go to Paris, where he was to enter the military school of the capital.

He saw Brienne only twice afterwards. In 1805, when he was on his way to Milan, Madame de Brienne, the widow of an ex-Minister of War, asked him to make her a visit.

"On the 3d of April, in the midst of the multitude which had come from all the villages of the neighborhood, he arrived by the inclined road which leads to the esplanade of the château, saluted Madame de Brienne, and took possession of the apartment which was once occupied by the Duke d'Orléans. . . . The next day, Napoleon, escorted by Louis de Canisy, a nephew of Madame de Brienne, whom he had made his equerry and a baron of the Empire, visited the military school. It was a ruin. Suppressed in 1793, sold as national property, the school had been totally demolished in 1799. There remained only the convent. . . . Napoleon galloped over the road to Bas-sur-Aube, and, borne on his swift Arabian, traversed the woods and the villages, and many of the places where he had so often walked with the Minims. He made sixty kilometres in all directions without stopping. On his return he offered to buy her château of Madame de Brienne; she refused. 'Brienne,' he said to her, 'is a great deal to me.' 'And to me,' she answered, 'it is everything.'"

The second visit was made on the 29th of January, 1814. Napoleon had said in 1805, "This plain would be a fine battle-field." And so it became in 1814. He had to take the château by storm, to defend it against a return of Blücher. On the 1st of February a battle was fought and lost. It was the first battle which Napoleon lost on French territory.

Correspondence.

CITIZENSHIP OF HAWAIIANS.

To the Editor of The Nation:

Sir: In your issue of December 2, pp. 432-3, speaking of a supposed election in Hawaii under the Revised Statutes of the United States, you say: "Enough 'outnumbering aliens' . . . would be left to bury him (Mr. Armstrong) in the drifts. The Hawaiians alone could snow him under to the tune of 39,000 to 3,000."

In re Kanaka Nian 4 L.R.A., 726 (1889) the Supreme Court of Utah, then a Federal tribunal, held that an Hawaiian could not be naturalized, but belonged to the same category as Chinese and Japanese, who, as you recognize, are ineligible to citizenship under existing laws as now interpreted. The

decision above referred to has never been questioned, and it is but one of the numerous group of authorities which apply literally the language of the Federal statute and exclude from naturalization all save "whites," "Africans," and "persons of African descent." Annexation would, of course, no more change this rule than did the purchase of Alaska permit its Indians to be naturalized. Whatever, therefore, may be said of annexation, it clearly would admit to citizenship (and hence to the suffrage) no race or class not already eligible.

Very respectfully yours,

CHARLES S. LOBINGIER.

OMAHA, NEB., December 6, 1897.

[Despite the decision quoted, the suffrage could be conferred on Hawaiians by act of Congress; and the most unblushing tramplers on Hawaiian rights have not proposed to do more than deprive its natives of the right to vote by some sort of legislative juggle. But the opinion cited emphasizes both the outrage and the peril involved in annexation—the outrage in robbing of the suffrage a people accustomed for forty years to electing their representatives, and the peril to us in taking in one more mass of aliens without the defence of the ballot.—ED. NATION.]

"THE MOST VALUABLE BOOK IN THE WORLD."

TO THE EDITOR OF THE NATION:

SIR: At a friend's house, a day or two ago, I happened to be turning the leaves of the *Outlook* for November 6, when my eye caught an article having the above title, and containing such choice bits of unintended humor that I cannot refrain from calling to one or two of them the attention of such Gothic scholars as may not see the magazine.

The article was written in Stockholm, and gives a very brief account of the Codex Argenteus. The writer was permitted by "Dr. Andersson, the professor in charge of the volume on the day" he called, to make photographs of its cover and of one page, which are reproduced in the article in question. The writer says:

"I asked Dr. Andersson for the book and chapter of this page, and he began at once to decipher it; but it is an immensely difficult thing to do. . . . He had not time to decide the location of the page. . . . He sent me, however, a week later, the translation from the third to the seventh verses, inclusive, of St. Mark."

This "translation," together with the letterhead of the University Library, he then also photographed, and it is reproduced in the magazine article, but there called "Dr. Andersson's transliteration into Swedish of the page printed opposite." Now, whether we call it a "translation" or a "transliteration" is of no consequence—it's a little difficult always to remember just what the difference is; at any rate, we are assured that it is Swedish, and corresponds to the Gothic of the opposite page. One is tempted to ask whether this is the Swedish that the writer used in engaging lodgings and in ordering his meals during his stay in Sweden. With Dr. Andersson he probably spoke English. Well, it may be a small matter, but it is worth mentioning that what the library assistant sent our writer was the most ancient Gothic we know anything about; in fact, it is exactly such a text of the Gothic Bible as may be found in any college library—though there may be some charm in having it with the exactness of photographic reproduction, in the handwriting of Dr. Andersson, which looks a trifle more learned than the print that we are familiar with.

It might also be mentioned in passing that Dr. Andersson seems to have forgotten just which page he let his American visitor photograph; at any rate, he sent him a transliteration of the page containing, as he says, Mark 7:3-7, while the reproduction of the photograph presents us with Mark 3:26-32!

But, of course, all this is beside the point. "In the midst of this present-day activity and life, when people, at least on our side of the sea, live so intensely in the present," pedantic accuracy is not needed or wanted. It is the spirit that is essential. Here is an ancient manuscript that, as every visitor to the Upsala Library observes, is highly prized. He is told that it is one of the earliest manuscripts we have of the Bible, that it is in the tongue of our ancient Teutonic ancestors, and that it has great philological value. The opportunity is too good a one to be neglected. There is no need of a knowledge of Gothic or of Swedish; the kodak is applied, a few notes are copied from Baedeker, and our literary or clerical American on his vacation hies him to the summit of one of the ancient burial mounds near Upsala, there to gain inspiration wherewith to clothe the article that is forming in his brain:

"No more peaceful sight ever spread before one's eye. . . . Dainty blue flowers are abloom on the crest of the hills of the gods, and the only sound is that of the distant tinkle of a bell where the herds are gathering for the night; there is no show of mailed men and savage battle-axes and rows of shining spears, no sound of rude speech, no call to battle, no challenge to the test of strength in the ferocious drinking-bout. The sun is slow sinking in the west; and far to the south, sharply defined against the rare blue of the Swedish sky, rise the great dark towers of the cathedral of Upsala standing their sentinel watch of the centuries over the silver-bound, purple-paged, priceless book in its oaken case in the steel-clad safe of the ancient home of Scandinavian learning."

With such a result as this—such a burst of mingled poetic reminiscences—who would dare raise his rude voice and ask impudent questions as to facts? Thou vain lover of the truth, go waste thy days in thy fruitless search, and let us glory in the glitter of what seems to be.

G. H.

DRAWING AS A COLLEGE REQUIREMENT.

TO THE EDITOR OF THE NATION:

SIR: Drawing has found a place on the list of Harvard entrance requirements. Candidates for admission to the Lawrence Scientific School may, beginning with 1898, present themselves for examination in the elements of free-hand drawing.

It would seem that what is good for the technical school would also be good for the college. Where the elective system prevails, there is no hard-and-fast line drawn between classical and scientific students. At Harvard very many of the courses in the Lawrence are open to the college, and the candidate for A.B. may be found doing exactly the same kind of work as the candidate for B.S. Some knowledge of drawing is equally important for both.

Further, the opinion may be hazarded that a great many students, not especially destined to scientific or mathematical pursuits, would be greatly benefited by a preparatory course in draughtsmanship. The argument, which I have frequently heard advanced, that the value of it as manual training would be great to persons given over wholly to intellectual studies, does not seem to me to amount to much, for in draughtsmanship mere manual dexterity is of little account; the aim of drawing is seeing. Yet precisely for its intellectual value, drawing may well claim a place in the preparatory school. It demands absolute clearness of vision, a thorough-going insistence upon certain large truths of construction and values. It gives training in clear thinking.

Aside from this general consideration, the subject directly concerns the departments of the fine arts and of archæology. Electives in the history of art attract an increasingly large number of college and university men, of whom a majority go to their subject absolutely without preparation. Ignorant of the first principles of drawing—"Le dessin c'est la probité de l'art"—they fall easily into a weak dilettantism of which the most common and disagreeable manifestation is an unintelligent contempt for all the later achievements of art. It may be doubted whether any student is fit seriously to pursue the study of the history of the arts without a fair knowledge of design.

It will perhaps be allowed a schoolman to suggest the conditions under which drawing, as a new comer into the preparatory school, would have to be received. Such a course as is found in many high schools and academies—a weekly exercise of an hour's duration, spread out over four years—would simply weaken the work in other departments, and fail to accomplish any results in the way of draughtsmanship. Drawing, as it seems to me, should be put into the same group with the chemistry or the advanced physics of the Harvard requirements. Only those schools that have good facilities for teaching it should be expected to offer it, and the manner of preparation should be somewhat similar. That is to say, the work ordinarily should be concentrated into a single year, preferably that before entering college. As much time should be spent upon it as upon a stiff laboratory course, such as advanced physics is supposed to be. Two hours a day through the year would be a reasonable expectation.

To work out the details of such a course would be interesting. Suffice it here to say that an artistic art-teacher would hardly be content with merely meeting such requirements as the Lawrence has set up. The human figure, despite the fact that all artists agree that only through mastery of it can there be good draughtsmanship, is quite ignored. Correct delineation of architectural forms and of machinery is perhaps all that scientific students need, but it must be remembered that the greater includes the less. The big facts about the human frame ought to be in the possession of every one who essays to draw. Furthermore, composition receives no attention, though it is of more moment to the average person of culture who will never be a professional artist than any other department of art. It is every year assuming a larger place in the

art schools; it would seem to deserve some consideration in secondary-school drawing.

Whatever defects, however, may appear in the course prescribed by any particular institution, every movement is to be welcomed that will help give to art standing-room in our secondary and higher education. It may be hoped that Harvard College and other colleges will eventually follow the example of the Harvard Scientific School.

FREDERICK WILLIAM COBURN.

BROCHURE.

TO THE EDITOR OF THE NATION:

SIR: In your review of 'Lumen' to-day you say, "Back in the early forties a little book, scarcely more than a *brochure*, was published, etc."

A book is either a *brochure*, or it is not. It does not cease to be one when it is big. The 'English Dictionary' is coming out in *brochures*. Of course you are aware that the word means simply an unbound volume. Your reviewer, however, seems to think that the term has some relation to the size of a book; and as such an erroneous impression seems not uncommon, you may think it worth while to call attention to this small matter. If we must use French words in writing English, let us use them with precision. G. H. F.

PHILADELPHIA, December 9, 1897.

[We fear our correspondent is overwise. Littré defines the word, for Frenchmen, as "*Petit ouvrage de peu de feuilles*, et qui n'est que broché." Hatzfeld, Darmesteter, Thomas define it as "*Petit ouvrage contenant seulement quelques feuilles d'imprimerie trop peu nombreuses pour former un livre.*" Dr. Murray, who (with doubtful propriety, we apprehend) marks the word as not naturalized, defines it as "*A short printed work, of a few leaves*, merely stitched together; a pamphlet." In fact, "brochure" is an English synonym for "pamphlet," in contradistinction to a sizable book worthy to be bound if not actually bound. We did not italicize it, as our correspondent has done, and have no apology to make for using a French word in writing English. We should as soon think of apologizing for the use of "bouquet" in place of "nosegay."—ED. NATION.]

Notes.

The fourth volume of Prof. Bury's edition of Gibbon's 'Decline and Fall of the Roman Empire' is soon to be issued by the Macmillan Co., along with volumes three and four of "Gossip of the Century," being 'Social Hours with Celebrities,' by the late Mrs. W. Pitt Byrne, edited by her sister, Miss R. H. Rusk.

Dodd, Mead & Co. have in press 'Address on Christianity,' lectures by the late Dr. Henry Drummond, and 'The Monkey that Would Not Kill,' children's stories by the same author.

The A. D. F. Randolph Co. will publish immediately 'The Scarlet-Veined, and Other Poems,' by Lucy Cleveland.

'To London for the Jubilee,' the correspondence of the Toronto *Mail and Empire*, by "Kit," editor of the woman's page in that journal, will soon be reprinted in book form by George N. Morang, Toronto.

George Routledge & Sons will shortly bring out a new edition of their 'Guide to London.' To the 20,000 Americans living in London, and the many thousands more who visit that metropolis, such a guide is a requisite. In this instance, they will have the benefit, as cicerone, of the Rev. Robert Gwynne, Vicar of St. Mary's, also known as the Greek Church, Charing Cross Road. Mr. Gwynne is admirably qualified for the work of editor.

Further announcements from T. Fisher Unwin are Dr. Birkbeck Hill's 'Letters of Dante Gabriel Rossetti to William Allingham, 1854-1870,' with illustrations; 'Modern France, 1789-1895,' by André Lebon; 'Sir Thomas Maitland,' by Walter Frewen Lord; 'The Buccaneers and Marooners of America,' by Howard Pyle; and 'The Work of Charles Keene,' by Joseph Pennell.

Mr. Gerald Duckworth, stepson of Mr. Leslie Stephen, has taken No. 3 Henrietta Street, Covent Garden, London, W. C., and will begin a publishing business after Christmas under the style of Duckworth & Co., in collaboration with Mr. A. R. Waller, editor of Florio's Montaigne in the Temple Classics.

One of the most sumptuous books of the season is Gaston Vuillier's 'History of Dancing from the Earliest Ages to Our Own Times' (D. Appleton & Co.). It is a quarto volume beautifully printed, and adorned with more than 400 illustrations, largely possessing an antiquarian interest as copies of curious old prints, caricatures, posters, etc., along with many reproductions of classic art and of modern paintings of balls, *fêtes champêtres*, and the ballet. All this fits the work for the parlor-table and insures a temporary diversion in turning the leaves. M. Vuillier's text does not pretend to scientific authority, and is perhaps hardly to be called continuously readable. It is a chronicle not severely literary in form, touching superficially the matters brought together by the writer's diligence. It is naturally strongest on the subject of French dancing, but begins with primitive man (whose possession of the dance is denied on p. ix, and affirmed in a note on p. 1), and gives special sections to Spanish and modern Greek dancing. The first edition went no further, but Mr. Joseph Grego has added two chapters on dancing in England, which much improve the book, while not affording any sharp contrast to M. Vuillier's desultory style. An index also has been prepared for this edition.

The *de luxe* edition of Owen Meredith's 'Lucile,' just issued by Frederick A. Stokes Co., falls short of the distinction we attach to this epithet. The letter-press of the poem, with its broad margins, is irreproachable indeed, without, however, being exactly elegant, and it is marred by Mr. C. McCormick Rogers's trivial pen-drawings. On the other hand, the full-page water-color designs by Madeleine Lemaire seem rather crude chromolithography, and would not of themselves deserve high praise, accomplished as this artist is in her proper field. On the whole, we are better pleased with the binding than with any other part of the manufacture.

'The Making of Abbotsford, and Incidents in Scottish History,' by the Hon. Mrs. Maxwell Scott (Macmillan), is a title which promises to give us something new about Sir Walter. Unfortunately, the name of his home is only a lure to lead one far afield into early Scottish hagiology and more recent Catholicism. Out of 363 pages, Mrs. Scott devotes 22 to Abbotsford, and these we are bound to term extremely thin. Nearly, if not quite, half the space is filled up by excerpts from Lockhart's 'Life' and Scott's own 'Letters on Demonology and Witchcraft.' The connecting narrative is unmarked by any special features worthy of praise. One is a little mystified by the appearance of such a paper at all; the more so when it proceeds from modern Abbotsford. Some light is thrown upon the puzzle by the consideration that this sketch was prepared for Mr. William Gibb's 'Abbotsford and its Treasures.' Whatever may have been its value in that context, we feel sure that it will cause some disappointment now. An erroneous impression of contents is conveyed by a taking title. Whether the three essays next following 'The Making of Abbotsford' may be considered to fall within the definition "Incidents in Scottish History," will depend largely on the reader's point of view. Their subjects are "Barbour's Legends of the Saints," "The Life of St. Margaret," and "St. Magnus of the Orkneys." We should class them under the literature of edification, though some parts of the setting are historical. The bulk of the book is occupied with short studies of topics which are very apt to interest Scotch Roman Catholics, and would interest the general public if their treatment but disclosed full and independent research. Mrs. Scott has, in almost every case, based her abridgment on certain sources which she candidly avows, but which, uncriticised and unsupplemented, are poor material for the historian. We do not feel called upon to estimate her account of Mary Stuart beyond saying that it seems typical of her method. One seldom meets such light-hearted neglect of what can be urged on the other side. The Marquis of Bute has aided Mrs. Scott in the preparation of her article on "St. Magnus of the Orkneys." To those who have read his rectorial address at St. Andrews, this collaboration will not appear strange.

It is but three years ago that we reviewed the concluding (fifth) volume of Creighton's 'History of the Papacy from the Great Schism to the Sack of Rome,' a work of high rank for English readers and students, which has just been reissued by the Longmans in six convenient duodecimo volumes, with a general index, and we can only recommend it anew. Its bibliographical and documentary utility is very great.

In keeping with their publication of Mrs. Browning's Letters, the Macmillan Company have very fittingly brought out the first complete edition of her Poetical Works, in a single volume. It is the inclusion of her youthful performances which distinguishes this collection from its predecessors; and the only omission is of the earlier translation of the "Prometheus Bound," which Mrs. Browning wished atoned for and obliterated by the later. The arrangement of the poems is chronological by volumes as originally published, but with a text of the author's final revising. Mr. F. G. Kenyon has thus edited with discretion, and Mr. Roger Ingpen has furnished a valuable chronological list of Mrs. Browning's works, and the index. We should add that this volume includes two prose papers—one on the Greek-Chris-

tian Poets, the other on 'The Book of the Poets,' both dating back to 1842.

An excellent idea, and well carried out, is that of the 'King's Story-Book' (Longmans), prepared, it is to be supposed, by Mr. George Laurence Gomme. He, at all events, furnishes the very sensible introduction, in which he points out that English history and romantic literature are capable of furnishing children as much entertainment as fairy tales, together with some more solid benefits. He has naturally drawn most freely on Scott; but Shakspere is liberally quoted. The field covered is from Hastings to Waterloo, and, while tastes may differ as to some of the selections, they are, as a whole, such as to stir the blood of those who love to listen to the recital of valiant deeds.

The 'Lincoln Literary Collection,' by J. P. McCaskey (American Book Co.), contains some six hundred selections in prose and verse, most of them of a suitable length for memorizing. The collection is named for Lincoln because of the habit attributed to him of committing to memory such poems as he enjoyed. The selections are, on the whole, good; at all events, a sufficient number of good ones can be chosen from so liberal a supply, and the book may well be put in the hands of children. Mr. McCaskey's idea that many of them should be "learned by heart" is, in our judgment, commendable.

One of the most charming of Christmas books for children issued in a long time is 'The Second Book of Nursery Rhymes,' set to music by Joseph S. Moorat, illustrated by Paul Woodroofe (F. A. Stokes Co.). The nursery rhymes are the delicious old English nonsense about the cow that jumped over the moon, pussy in the well, and that sort of thing, and it is high praise to say that the pictures and the music are equal to the verses in quaintness and merit. The illustrations are artistic, and the music is surprisingly good, even in its harmonies, which in books of this class are usually commonplace and machine-made. Another meritorious volume is 'Gems of School-Song,' selected and edited by Carl Betz (American Book Co.). Mr. Betz is supervisor of music in the public schools of Kansas City, and his object in making this compilation was to acquaint the teachers of our public schools with the songs used in the public schools of Germany. Many eminent composers are represented in the list, and there are a number of folk-songs; all being arranged according to their subjects—spring, flowers, home, birds, soldiers, forest, hunters, etc.

We welcome the third volume of 'American Book-Prices Current,' compiled from the auctioneers' catalogues by Luther S. Livingston (Dodd, Mead & Co.). Two sales in particular, in the period covered (September 1, 1896-'97), the Bierstadt and the Roos, gave an opportunity to gauge the values of first editions of American authors. The Sewall collection secured $1,250 for a single book, the Book of Common Prayer of 1788, in which Franklin had a hand; and the Frederickson Library reaped $615 from Shelley's 'Queen Mab,' first edition, with autograph presentation inscription to Mary Wollstonecraft Godwin. For the rest, it was made evident that the Shelley cult is rather feeble in this country.

In his 'Theory of Electricity and Magnetism' (Macmillan), Dr. A. G. Webster of Clark University has aimed "to present to the student the results of the theory as it stands to-day after the labors of Faraday, Maxwell, Helmholtz, Hertz, and Heaviside." This he has accomplished in a thoroughly satisfactory manner. A suitable mathematical introduction clears the way for an unencumbered discussion of the subject. The diagrams, which have been especially prepared for the text, are clear and attractive.

From Longmans, Green & Co. we have a translation, by Dr. C. V. Burton, of Ebert's 'Magnetic Fields of Force, Part I.' In this work the conception of lines of force is used in the exposition of the phenomena of Magnetism, Electro-Magnetism, and Induction, and the subject is treated in accordance with the latest theoretical developments. The treatment is clear and concise throughout, and many experiments are described which well illustrate elementary principles. This method of presenting the phenomena by the logical application of the conception of lines of force makes clear the relationships between various phenomena which are too often overlooked by the student, and enables him to get a more connected and complete understanding of the whole subject.

Dr. Christiansen's 'Elements of Theoretical Physics' has been translated by Prof. W. F. Magie of Princeton (Macmillan). The work presents in compact form a review of many important topics in mathematical physics. By judicious selection of the material, and by considering only what is especially weighty, the author has been able to give a satisfactory discussion in limited space. The treatment is up to date, clear, and vigorous.

Anthony and Brackett's 'Text-Book of Physics' has appeared in a revised edition (Wiley & Sons) from the hand of Prof. Magie. The reviser has adhered to the original design of the authors in presenting the fundamental principles with brief statements of their experimental verification. The principal changes in the revision are: the omission of several demonstrations of minor importance; a rearrangement and enlargement of the Mechanics; the addition of a discussion of the kinetic theory of matter, and a treatment of Magnetism and Electricity by the method of tubes of force, with discussions of hysteresis and the Roentgen radiance. The Mechanics is treated more logically than in the former editions, and the discussion of flux of force furnishes a suitable preparation for the presentation of Electricity and Magnetism by the method of tubes of force. Sound is put in a more natural position, being placed after Mechanics and before Heat, and many minor changes and corrections have been made.

Mr. John Ritchie, jr., librarian of the Boston Scientific Society, has sent, without charge, to a large number of libraries, a "List of Books in English on Travel, Exploration, and Mountaineering, published during the year ending August 31, 1897." The List occupies 13½ single-column pages, very well printed, and the accompanying flyleaf suggests that the publication, if found useful, will be continued. It is an author list, without a subject index, but with a one or two-line critical opinion of each book. It will, therefore, be useful to those whose business it is to choose books for purchase, but the number of persons who would benefit by it would have been vastly larger had the titles been arranged by subjects, with index to authors. We notice a variation from accepted rules of cataloguing in placing De Amicis under A instead of D; but no misprints, except J. I. for I[saac] I. Hayes. In a few cases neither the title nor the cataloguer's comment gives even a hint as to what part of the world is described.

'L'Espagne en 1897,' by Gaston Routier, is the fourth edition of this Paris journalist's book, and is sent us by Lemcke & Buechner. It is pitched in a decidedly dithyrambic key, from "The more one knows Spain the more one loves her" of the beginning, to the final words, "Chapeau bas, messieurs, et salut à l'Espagne!" But despite this rather alarming tendency to gush, the volume has a good deal of statistical and political information which is of undoubted value. The personal details in the chapter on the Madrid press, for example, it would be hard to find so compactly given elsewhere. Frankly journalistic (M. Routier represents, we believe, the *Petit Journal*), the book nevertheless yields many an instructive glimpse of contemporary Spain. Every one in private, says the author, groans over the Cuban war and wishes it ended on any terms; but the same people in public pledge their last peseta and their lives to the defence of the "integrity of the national territory." And they mean it, too.

The current *Harvard Graduates' Magazine* offers nothing of equal interest to Prof. Norton's sketch of the late Prof. Child, and Messrs. Lane and Tillinghast's tributes to the late Justin Winsor. They add much to what has already been written regarding these two personalities (alike indefatigable, but otherwise very distinct), and show that no one hand could do justice to their remarkable qualities of head and heart. A heliotype portrait of Winsor and a portion of Kruell's engraving of Child accompany the articles, and will give posterity a true idea of their appearance. We should like to join the life-examples of these two men of an elder generation to the "Important Suggestions in Athletics" made in another part of this number of the magazine.

It appears from a recent article in the London *Notes and Queries*, that British soldiers no longer fight under a flag, and that the color-bearer's occupation is now gone. The flag of one regiment was laid up last summer in Lichfield Cathedral with some ceremony. In the course of this function the following statement, in a letter from the Commander-in-Chief, Lord Wolseley, was read: "In future it would be madness and a crime to order any man to carry colors into action. You might quite as well order him to be assassinated. The Germans carry the poles on which the colors used to be, so that they attract no notice in action. We have had most reluctantly to abandon a practice to which we attached great importance, and which, under past conditions of fighting, was invaluable in keeping alive the regimental spirit upon which our British troops depended so much." This letter gives a glimpse of a department of military history on which standard authors are taciturn, but ought to speak out. An officer who was in a battle before Atlanta informs the present writer that Sherman there left his horse altogether to his orderly, and was himself dressed in the uniform of a private. How often Sherman or other officers took this expedient for making themselves less conspicuous targets for sharp-shooters, and how often, if at all, in our civil war, regiments fought without color-bearers, members of the Grand Army can tell us.

The "words by Rudyard Kipling" attached to 'An Almanac of Twelve Sports by William Nicholson' (New York: R. H. Russell) do not enhance the worth of a decidedly attractive thin folio. The cleverness of the artist for strong contrasts and effective coloring overbears that of the verse-maker, who is all but bent on being as foolish as he can.

—Among the noticeable illustrated articles in the *Century* for December are one on "Tennyson and his Friends at Freshwater," by V. C. Scott O'Connor, and one on "The Wonderful Morning-Glories of Japan," by Eliza Rubamah Scidmore. If the latter leads to a convolvulus-variegation craze in this country, we shall know whom to hold responsible. The article is worth reading even by those who know little of flowers, for the reflected light it throws on the Japanese character. The Tennyson article contains some reminiscences of the poet's brothers which are certainly worth preservation, as might have been also a well-known anecdote of Septimus that we do not remember to have seen in print, making him reveal himself to a casual and astonished visitor as "not Alfred," but "I, Septimus—the most morbid of the Tennysons." The "Causes of Poverty," by the late Francis A. Walker, is a solid article, in which a good deal of humbug is demolished, as, for instance, the theory that rent is necessarily a progressive cause of poverty. The argument demolished may be stated in a very few words, as follows: Labor-saving improvements increase the production of wealth—for wealth labor and land are required; hence the effect of labor-saving improvements will be to intensify the demand for land, thus increasing rent, which is wrung from the poor. The logical answer to this is obvious: If the demand for land is increased, so may be the demand for labor; hence wages may rise as rent does. And so, as a matter of fact, they do rise. "In those forms of production which specially characterize modern society, the rate of enhancement of the demand for labor tends to exceed, and far to exceed, the rate of enhancement of the demand for land." E. H. House's "Edwin Booth in London" saves from oblivion a conversation about the drama between Charles Reade and Edwin Booth, reproduced from memoranda taken down at the time by Mr. House. It is Reade to the life, even to the little mechanisms of expression, as, "Give our actors a metrical speech to deliver, and—endure it if you can." Of Forrest he says: "A lusty cock on his own dunghill, he runs abroad into his neighbor's barnyard, and gets crowed down for his pains, and then he sulks, and tries to set two countries by the ears." To Reade the stage was a natural element—almost more than literature—and it is interesting to observe the deference with which all his statements and opinions about the details of the dramatic art are listened to by Booth. Reade insisted that the way for an English author to win the American heart was to keep clear of "injustice."

—The *Atlantic* contains a paper by Mr. T. W. Higginson on "Literary London Twenty Years Ago," which seems to carry us back much farther than 1878, the illusion arising from the fact that the principal people mentioned are now all dead and "bound up." He recalls one or two neat pieces of observation by Matthew Arnold. Mrs. George Bancroft had said that she had never known an English scholar who, if he had chanced to dine with a nobleman, would not speak of it to everybody, whereas no German savant would ever think of mentioning such a thing. "Very true," said Arnold, "but the German would be less likely to be invited to the dinner." He also pointed out that the word *mésalliance* was not English, nor was there any word in our language to take its place—the explanation being, of course, that in England intermarriage between noble and non-noble is encouraged. Dr. George Birkbeck Hill brings the correspondence between Swift and his friend Chetwode to a close in a fourth paper, which possesses a good deal of interest. It is curious to find that in 1729 one might, according to Swift, live in England, in the country, "with repute, and keep the best company," for £100 a year; and the editor cites Boswell's account of Peregrine Langton's housekeeping in confirmation of this. Swift as a correspondent, though always candid, was careful to avoid the familiarity which even among friends breeds contempt. In verse he allowed himself a license which leads Mr. Hill to think that the lines,

> "But laughed to hear an idiot quote
> A verse from Horace learned by rote,"

may have been a hit at Chetwode, who, in an undated letter, had referred to the ninth satire. Swift replies that it is "a miracle" to him how his friend "came acquainted with Horace." This is justly endorsed by Chetwode, "a very extraordinary letter, designed, I suppose, to mortify me." The correspondence ends sadly enough. As Thackeray says somewhere, Swift's mind in its sanity is so great that there is something awful in the premonitions of its decay and the gloomy shadow which his fate casts before it.

—*Harper's* article on "A Bird's Egg," by Ernest Ingersoll (with colored plates), is really the most interesting paper in the number, but there is a belated account of the Queen's Jubilee, by Richard Harding Davis, with many illustrations, and a collection of early letters of George William Curtis (contributed by George Willis Cooke), which contains one of considerable interest. It was written from New York in 1844, and explains his earliest views about association and individualism. For a young man of twenty, it shows a remarkable insight, and explains why he began his career out of sympathy with the Brook Farm experiment, though interested in it. "I feel," he says, "that our evils are entirely individual, not social. What is society but the shadow of the single men behind it?" Beginning as an Emersonian individualist, his life and experience made him a practical and political individualist, and it is interesting to see in this letter the germs of the character which made in the end an independent journalist and leader out of a man whose other youthful letters show him so sympathetic, impressionable, and adapted to be drawn into associated action of all kinds. Some of his little imitators who imagine that independence consists in "organizing a movement" against those who are not independent, should study this letter.

—The first part of "The Workers," by Walter A. Wyckoff, comes to an end in the Christmas number of *Scribner's*, and the current paper deals with life in a logging camp. If this is what he represents it to be, such Labor has got very little above the animal stage. His idea seems to be that the only cure for Labor is a sort of ecstatic religious revival. Mr. Wyckoff is now going to show us Labor at work in Chicago and other crowded centres, and there possibly the reader will find a higher type than the country produces. The general result thus far will do little but reinforce the view of those who regard realistic altruism as a virtue which should not go too far afield in search of its objects. Cosmo Monkhouse's article on Sir Edward Poynter gives some interesting reproductions, while "The Posing of Vivette," a poem by J. Russell Taylor, illustrated by A. B. Wenzell, is a novelty in its way.

—The State Historical Society has done something for leavening Wisconsin with a bibliothecal spirit. There are thirty-five free libraries in the State, each of which has more than 1,000 volumes, while the aggregate total is 238,855 volumes. One of these, in Menomonie, founded ten years ago by a lumberman, as a memorial of his daughter, has 6,121 volumes, and is free to all inhabitants of Dunn County. But one of its directors, J. H. Stout, observed that this choice library was of little use to 17,173 inhabitants of Dunn (a vast majority of the population of 22,664) who lived beyond the city limits of Menomonie, and who took out less than 3,000 books in a year. They were scattered over a region two-thirds as large as Rhode Island. In view of these facts, Mr. Stout bought 500 volumes, the most suitable, so far as he could learn, for rural circulation. He divided his purchase into sixteen libraries, each of thirty volumes, packed in a box which would also serve as a bookcase, and gave notice throughout the county, where he had been already known as a philanthropist, that he would send a travelling library for free use to every village, hamlet, and cross-roads where it could be suitably cared for, and as soon as one set of books had lost the gloss of novelty, he would replace it with a fresh series. In May, 1896, his first plant was at sixteen stations, but these during the year increased to thirty-four. Every book in the first ten boxes sent forth was taken out on an average twelve times in six months. The depositories were stores, post-offices, and farm-houses, so sequestered that there was neither store nor post-office in sight. This initiative of Mr. Stout induced the Legislature of the State to make enactments in furtherance of his movement, which everybody wishes had been started sooner. His example has also proved contagious. It has likewise provoked his brethren by the higher birth in Chippewa, Lincoln, and Wood Counties to emulate his endeavor, which was "to do the greatest good to the greatest number." His new departure seems likely to sweep the State like a prairie-fire, and make libraries as multitudinous as saloons. A pamphlet just issued by the Wisconsin Free Library Commission at Madison ('Free Travelling Libraries in Wisconsin') sets forth this history in detail, with many photographic illustrations.

—In a valuable bulletin prepared by Alfred J. Henry, and just issued by the United States Weather Bureau, relative to the rainfall of our country, it is stated that rain probably falls in the United States at one point or another every day in the year. Theories of rainfall are then briefly set forth, as are our limitations to clear understanding of all causes for sudden atmospheric cooling sufficient to produce precipita-

tion, and some of the known forces (chiefly geographic) contributing to abundant rains. As to geographic distribution, a narrow belt of very heavy rainfall extends from Cape Flattery on the north to the middle of Oregon Coast on the south, and inland to the summits of the Coast Range. Precipitation on mountains is always large, though not as yet accurately tabulated. East of the one hundredth meridian the average fall varies from about twenty inches yearly to sixty on the Florida and Gulf Coasts. Local distribution of rainfall is erratic, the catch of two gauges but a few miles apart often showing a total difference of ten or even fifteen inches, a few thunder-storms alone being enough to account for the variation. Unlike ordinary weather conditions, droughts have apparently little progressive movement from west to east, but show a tendency to irregular recurrence in periods of from four to eleven years. The amount of water falling in a "cloud-burst" or "torrential down-pour" has never been accurately ascertained. The great majority of excessive rains of short duration in the United States occur east of the one hundred and fifth meridian, chiefly in summer months. Frequently they appear in connection with afternoon thunder-storms, occasionally happening in the track of West India hurricanes, and are less frequent inland than on Southern coasts. A series of fine weather maps and carefully tabulated results accompany this rainfall bulletin.

THE HOUSE OF BLACKWOOD.

William Blackwood and his Sons: Their Magazine and Friends. Annals of the Publishing House. By Mrs. Oliphant. 2 vols. London: Blackwood; New York: Scribners. 1897.

"A' contributors are in a manner fierce," said the Ettrick Shepherd, himself a contributor whom it would be hyperbolical to call polite. For William Blackwood and his sons the publishing business was a long and severe training in diplomacy, and about the Edinburgh offices there ever hung a strong aroma of warfare. After an Iliad of libel-suits bravely faced and duels averted, they have fitly received their apotheosis at the hands of a contributor, Mrs. Oliphant, whose reverence for the house, its traditions, and its magazine, attains the dimensions of a cult.

The genius for editorship which runs in the Blackwood family first displayed itself in the founder of the publishing house, William Blackwood the First, who, early in this century, began his career as a dealer in old books in Edinburgh. His first publication was a catalogue of his own books, and is noteworthy from the fact that it was the first in which the books were classified, and is still regarded as an authority. The Scotch agency for the great London house of Murray—an honor eagerly sought by every Edinburgh bookseller—gave Blackwood a footing which he was not slow to secure. Those were the days when the authorship of 'Waverley' was still a mystery to the general public. But in Scotch publishing circles it was an open secret, and when James Ballantyne, Scott's literary agent, offered Blackwood a work in four volumes to be called 'The Tales of My Landlord,' the ambitious young publisher knew that it was Walter Scott with whom he had to deal. He writes in a letter to Murray: "I naturally asked him, was it by the author of 'Waverley'? He said it was to have no reference to any other work whatever, and any one would be at liberty to form their own conjecture as to the author" (p. 57). So it was that, for a brief period of triumph, Blackwood became Scott's publisher. Unfortunately he prided himself on "taking an interest in the literary side of my business," and was rash enough to make some criticisms on the 'Black Dwarf,' whereupon his connection with Scott came to an abrupt close with the following expurgated note from the irate novelist:

"DEAR JAMES [BALLANTYNE]: I have received Blackwood's impudent letter. Tell him that I belong to the Black Hussars of Literature, who neither give nor receive criticism. I'll be cursed, but this is the most impudent proposal that ever was made.
"W. S."

Thus did Blackwood's first publishing triumph become a two-edged memory. In the end, it was Scott that suffered. If, instead of returning, in a fit of resentment, to the shaky firm of Constable, he had left his publishing affairs in the reliable hands of Blackwood, he would have been spared the financial ruin that clouded his later years and turned his literary life into a painful struggle with debt.

Susan Ferrier, the novelist, whose vogue in her undiscriminating day was much greater than that of her contemporary, Jane Austen, owed her early success to Blackwood's encouragement. Her first novel, 'Marriage,' published anonymously, as was the fashion, drew a charming tribute from Scott, the last sentence of whose 'Tales of My Landlord' was as follows: "If the present author, himself a phantom, may be permitted to distinguish a brother, or perhaps a sister, shadow, he would mention in particular the author of the very lively work entitled 'Marriage.'" In her estimate of Miss Ferrier, Mrs. Oliphant's love of all things Scotch has run away with her critical sense, and the reading world, which leaves 'Marriage' unread, may well be astonished at her remark that Susan Ferrier and Jane Austen "now occupy a very similar level" (p. 42).

But, for Mrs. Oliphant, as for the firm, the story of William Blackwood's rise in his profession and his publishing adventures is but the prelude to that auspicious day in 1817 when, even as fifteen years earlier, Jeffrey, Sidney Smith, and Brougham, at a casual meeting, had founded the *Edinburgh Review*, so John Wilson, Lockhart, and Blackwood put their heads together and produced *Blackwood's Magazine*—the immortal "Maga." Blackwood's first magazine venture had been unlucky, owing to the incompetence of his editors; and the periodical that rose from its ashes was managed by the three leading spirits, in a committee of which Blackwood was the predominant partner. "Maga" was a Tory rival of the Whig *Edinburgh*, and the politics of both magazines colored the literary articles and the reviews to a degree that we, for whom literature is independent of every criterion save that of taste, can hardly realize. Those were the days when newspapers were few and "not respectable," and men looked to the monthly reviews for political writing. The author might be alien to politics. "The Reviewer," says Lockhart, "does not mind that; when he sits down to criticise, his first question is not, 'Is the book good or bad?' but, 'Is this writer a Ministerialist or an Opposition-tionist?' . . . If the author has a nephew or a cousin or an uncle who is a member of Parliament and votes, that is quite sufficient" for both *Edinburgh* and *Quarterly*.

Mrs. Oliphant has a keen sense of the romance of "the Trade," in the happy *tempus actum* before the author sold his work "per thousand words." Her description of Blackwood's home-coming on the eve of the appearance of the first number of "Maga" is worth quoting:

"He walked home in the keen evening air . . . with the precious little packet under his arm. He went into his house, where all the children—by this time a nursery full—rushed out with clamor and glee to meet their father, who, for once, in his excitement, took no notice of them, but walked straight to the drawing-room, where his wife, not excitable, sat in her household place, busy, no doubt, for her fine family; and, coming into the warm glow of the light, threw down the precious Magazine at her feet. 'There is that that will give you what is your due—what I always wished you to have,' he said, with the half-sobbing laugh of the great crisis. She gave him a characteristic word, half satirical, as was her way, not outwardly moved, with a shake of her head and a doubt. He was always sanguine, but she had no bees in her bonnet. Sometimes he called her a wet blanket when she thus damped his ardor—but not, I think, that night. And the next day all Edinburgh was ringing with the wild, witty, flagrant attacks upon all the nobilities. And the authors were the only men who did not venture to laugh too much over this joke, which convulsed their world" (p. 128).

We Epigoni, far removed from those Titanic enterprises may marvel at the *succès de scandale* achieved by the "Chaldee MS.," which Wilson and Lockhart, with the countenance of the "man in plain apparel," concocted for that famous first number. Mrs. Oliphant thinks it "scarcely necessary to explain" what the Chaldee MS. was, but we imagine that its very title is unknown nowadays to all but students of literature. This satirical composition, at which all Edinburgh shook and far-away London was moved, was an attack in Biblical language on the rival publishing firm of Constable, with a background of Edinburgh notables, including Scott, "that great magician which hath his dwelling in the old fastness." The descriptions of themselves by Wilson and Lockhart clung to them for life. Wilson figured as "the beautiful leopard from the valley of the palm trees, whose going forth was comely as the greyhound, and his eyes like the lightning of fiery flame. And he called from a far country the scorpion, which delighteth to sting the faces of men." But the reader who is interested in those heroic days of literature will count the real scandal the bitter attack on Coleridge and his works which appeared in the same number. It was followed by the famous blundering article on the "Cockney School of Poetry," in which Leigh Hunt was the chief victim, though the writer of the article promises to attack in turn "the younger and less important members of the Cockney School, the Shelleys, the Keatses, and the Webbes." Blackwood was promptly threatened with two libel suits, one in London, brought by Leigh Hunt, the other in Edinburgh, by an advocate who had figured as a "beast" in the Chaldee MS. "All you have to do is to keep your mind in good fighting condition," wrote "Christopher North," from the safe shelter of anonymity to the less fortunate publisher.

The early history of the magazine, on which we have not space to dwell, gives a vivid picture of Blackwood in the character

of Phaethon vainly trying to control his plunging coadjutors. We may, however, remark in passing that, whereas for Mrs. Oliphant "Maga" was the turning-point in the fortunes of the Blackwood house, and a source of undying fame to its contributors, a very different view of its influence has been taken by Mr. Andrew Lang. In his recent 'Life of Lockhart,' Mr. Lang expresses a pious regret that Lockhart blighted his prospects by his association with the magazine. "It is painful for a biographer," says Mr. Lang, "to be obliged to confess his hero's inexplicable attachment to 'the mother of mischief.' But he is well assured that, while Scott did not indeed regard the offences of 'Maga' with our modern horror, still he did most earnestly endeavor, on every occasion, to withdraw Lockhart and Wilson from the cup of her inexplicable sorceries. Alas, to each might have been said:

" 'La laide Dame Sans Merci
Thee hath in thrall.' "

Mr. Lang can find excuse for neither the blame nor the praise of "Crusty Christopher," but his rhetoric is quite misplaced, for it is doubtful whether Lockhart could have done better for himself than he did by that lively career of Edinburgh journalism which indirectly led to his position as Scott's son-in-law, and gave him, later, the editorship of the *Quarterly*. Lockhart's claim to fame rests on his Lives of Burns and Scott, and his youthful indiscretions in criticism are forgotten save by the professional critic. If he blundered over "Shelly" (*sic*) and the Cockney School, we may remember that his criticisms on Tennyson's earlier poems were, in the main, just, as Tennyson acknowledged by his alterations of the passages criticised. In these days of huckstering criticism, when only ink is shed, when the minor poet lives by writing well within the comprehension of his century, and the minor critic lives by praising him, we may spare some indulgence for Jeffrey and Lockhart and "Christopher North," who lived in an age that would not look at Coleridge's 'Lyrical Ballads,' but devoured three editions of Leigh Hunt's 'Juvenilia.' The Blackwoodsmen did not cultivate the gentle art of suffering fools gladly, and in their joy of battle they made some serious blunders. "I now think with deep sadness of the pain my jibes and jokes inflicted," wrote the "Scorpion" Lockhart, later, of his share in that literary horseplay. "The Animosities are mortal, the Humanities live for ever," was Wilson's fine apology to Leigh Hunt.

Blackwood's Magazine was the first to publish a serial novel. Not the least interesting pages in Mrs. Oliphant's 'Annals' are those that describe George Eliot's connection with the Blackwood firm. The larger part of the correspondence dealing with this period has, however, been reserved for the third volume of the 'Annals,' which Mrs. Oliphant did not live to complete. The Blackwoods rejected Thackeray's 'Roundabout Papers,' and declined the 'Hoggarty Diamond,' but their mistakes of this sort were few, and they erred rather on the side of enthusiasm for new writers. Lord Lytton was a constant contributor to "Maga"; we cannot refrain from quoting a note to the firm written by this ladies' novelist, in anticipation of a public dinner in Edinburgh:

"Pray, let me express a hope that the Music Hall will not be crowded with ladies—they always throw a chill upon every audience. Accustomed to talk, it bores them to listen, and their unaccustomed and frigid silence stifles every attempt at a cheer which the laboring orator vainly endeavors to provoke. If those fair refrigerators are to be multitudinous, I hope they will be ranged together, and not interspersed throughout, so as to leave the whole assembly despoiled of any spark of electricity by non-conductors of silk or muslin."

"Now that we are all dead," as Sydney Smith would say, the publication of the letters of the famous Blackwood group, which are of the deepest interest to the historian of literature, can hurt no one's feelings. Even Mr. Gladstone, who, if he cares for these things, can derive little pleasure from the recent biographies of his famous contemporaries, comes off here with nothing worse than faint praise. "I liked him much better than I expected," says John Blackwood. Mrs. Oliphant was herself for forty years a contributor to *Blackwood's Magazine*, and we may fitly conclude our notice of her last work with her own account of an early interview with the representatives of the house to whose history she devoted her last years:

"I had myself gone through many vicissitudes of life when I found myself in the winter of '60 in Edinburgh, whither I had come with my little family of three fatherless children. I was poor, having only my own exertions to depend on, though always possessing an absolute, foolish courage in life and Providence. . . . My contributions sent from Italy, where I had passed a year watching my husband's waning life, had been, as I can see through the revelations of the Blackwood letters, pushed about from pillar to post, these kind-hearted men not willing to reject what they knew to be so important to me, yet caring but little for them. . . . Why I should have formed the idea that in these circumstances, when there was every appearance that my literary gift, such as it was, was failing me, they would be likely to entertain a proposal from me for a serial story, I can scarcely now tell; but I was rash and in need. At the time I was living in Fettes Row, in a little house consisting of the ground floor and the basement below. . . . I walked up to George Street, up the steep hill, with my heart beating, not knowing what they would say to me. There was, indeed, only one thing they could say. They shook their heads. . . . I remember very well how they stood against the light, the Major tall and straight, John Blackwood with his shoulders hunched up in his more careless bearing, embarrassed and troubled by what they saw and no doubt guessed in my face, while, on my part, every faculty was absorbed in the desperate pride of a woman not to let them see me cry, to keep in until I could get out of their sight. I remember also the walk down the hill, and a horrible organ that played 'Charlie is my darling,' and how one line of the song came into my mind, 'The wind is at his back.' . . . I went home to find my little ones all gay and sweet, and was occupied by them for the rest of the day in a sort of cheerful despair. . . . But when they had all gone to bed, and the house was quiet, I sat down—and I don't know when, or if at all, I went to bed that night; but next day (I think) I had finished, and sent up to the dread tribunal in George Street a short story, which was the beginning of a series of stories called the 'Chronicles of Carlingford,' which set me up at once, and established my footing in the world."

Although the "Annals" are as yet incomplete, Messrs. Blackwood have wisely provided Mrs. Oliphant's two volumes with an excellent index. We need hardly say that the book is admirably got up in all respects.

RECENT AMERICAN POETRY.

Goethe's saying that so soon as a man has done anything good, the world conspires to keep him from repeating the process, is well illustrated when a volume of unquestionable merit, such as Mr. Lloyd Mifflin's 'At the Gates of Song' (Estes & Lauriat) is at once handicapped by praises so extravagant as not merely to create a reaction in the minds of more deliberate critics—a result not wholly injurious—but to risk damaging almost irretrievably the standard of the author himself. If a man is told outright that his first book places him at the head of all poets of the nineteenth century, what hope is there that his second book will do him any credit? Great reputations rarely begin in a blaze of triumph; it is during a period of obscurity, *obscuro in ævo*, that the fame of Marcellus grows; it is the Martin Tuppers and Alexander Smiths who go up like rockets. There are fortunately many indications in this book that Mr. Mifflin is more modest for himself than are some of his critics for him, and that he may vindicate some of their predictions if they will only let him alone. Daring he certainly does not want, if printing a volume consisting exclusively of one hundred and fifty sonnets can demonstrate it; neither Petrarch nor Rossetti attempted as much, and we can recall no corresponding attempt except in the case of Mr. Wilfrid Scawen Blunt. Then it is to be remembered that the sonnet, of all forms of literature, has its own laws, imperious and vital; and not only does Mr. Mifflin venture on the dangerous experiment of six-syllable lines (p. 139), but he is often slovenly in his rhymes, though rarely in his measure; nor does he keep closely to the distinction between what is sublime and what is fustian. Both these defects are apparent, oddly enough, in the very sonnet selected by his most ardent admirer as having "no parallel in nineteenth-century English literature, unless it be Hunt's famous sonnet on the Nile," Let us quote this, by way of criticism (p. 23):

SESOSTRIS.

Sole Lord of Lords and very King of Kings,
He sits within the desert, carved in stone;
Inscrutable, colossal, and alone,
And ancienter than memory of things.
Graved on his front the sacred beetle clings;
Disdain sits on his lips; and in a frown
Scorn lives upon his forehead for a crown.
The affrighted ostrich dare not dust her wings
Anear this Presence. The long caravan's
Dazed camels stop, and mute the Bedouins stare.
This symbol of past power more than man's
Presages doom. Kings look—and Kings despair;
Their sceptres tremble in their jewelled hands,
And dark thrones totter in the baleful air.

Compare the magnificent dignity of the closing lines of Shelley's sonnet on a similar subject, "Ozymandias," with the merely melodramatic terrors of the last three lines of Mr. Mifflin's; note the feebleness of sound in the line preceding these; observe the flagrantly false rhymes of "man's" and "hands," with the ungrammatical "ostrich dare"; and see how far the poem is from that perfection of external form which is the first test of a sonnet. In another sonnet selected by the critic for praise almost equally extravagant ("The Flight," p. 49), we find at the very beginning three words used as rhymes which have to a delicate ear three distinct terminating sounds, namely, "stood," "solitude," and "brood." It is useless to point out instances where poets of high reputation (Mrs. Browning, for instance), have used rhymes far worse than these—they doubtless have; but a sonnet is a sonnet; the false stroke which would not show on a statue may be fatal to a cameo.

For the rest, we may say without hesitation

that no recent volume by a new American poet gives so much food for thought or so much real beauty of imagery as this by Mr. Mifflin, and it is not antagonism but good will that dictates these criticisms. The following sonnet seems to us one of the noblest and best sustained of those contained in the volume: its symbolic meaning is clear and elevated, and it rises with gradual swell to a fine conclusion (p. 109):

THE FRONTIER.

O Soldier, treading through the long day's heat,
With tattered banner and with drooping crest,
Now as the sun sinks down thy purpled West;
Thou who hast come so far with aching feet,
Thou who must march and never canst retreat,
Art thou not weary of the bootless quest?
Look'st thou not forward to a time of rest?
Sweet will it be—beyond all telling sweet—
After long marches with red danger fraught;
The wakeful bivouac; the assault and flight—
After thy scars of glory; sore distraught;
To camp afar—beyond defeat and fight—
Wrapped in the blanket of a dreamless night,
Out past the pickets and the tents of thought!

Critics of the rough-and-ready school were, it seems, mistaken in the eagerness with which, a year or two ago, they consigned the sonnet to oblivion. There have appeared almost simultaneously two sets of American translations of the remarkable sonnets which won for the Franco-Cuban Hérédia an unexpected promotion to the French Academy. Part of these appear in the "Library of the World's Best Literature" (xiii, 7277), the translator being Prof. Maurice F. Egan, and the rest in a volume, 'Sonnets of José Maria de Hérédia,' done into English by Edward Robeson Taylor (San Francisco: Doxey). There is something improbable to many minds in the suggestion of a Frenchman, even if only a semi-Frenchman, as being a sonnetteer, although Prof. Egan reminds us that the Provençals claim that the very name came from the recurrent tinkling of their sheep-bells (*sonnette*), and that all Paris was divided between the merits of the two sonnetteers of the seventeenth century, Voiture and Benserade. But no one who reads Hérédia's poems, whether in the original or in the translation, will doubt that in his hands a new quality is introduced into the sonnet—something which neither Petrarch nor Rossetti developed—a fiery enthusiasm, a brilliant touch, and an astonishing command of technical and local vocabulary. Of the two translations, Prof. Egan's is the superior, as showing the more trained poetic touch, and he has also the advantage of measuring himself only against ten picked sonnets, while Mr. Taylor undertakes more than a hundred. On the other hand, Mr. Egan refines more upon the vigorous and daring dialect of the poet, and therefore gives us a little less of his flavor. Each is responsible for some feeble or lax lines, and in respect of rhymes Mr. Taylor is frequently faulty, giving us, for instance, *keen* and *skin*, *tongue* and *long*; *fume*, *boom*, and *foam*; *drear* and *where*; *on* and *own*; *then* and *gain*. In ordinary, loosely jointed lyrics some of these rhymes might pass; but a sonnet, we repeat, is nothing if not perfect, and Mr. Taylor himself claims for his author "technical perfection." Mr. Taylor gives us also quaint words of his own, such as *kissful*, *bashed*, *defeatures*, besides the perilously varied and often technical language of Hérédia himself. Nor can it be claimed that even the latter's artistic taste is perfect, when we find him capable, at least once, of unquestioned bathos. No one recognizes better what the French call veiled climax in the sonnet—the need of leaving each thought at high-water mark in the last line; yet who but a Frenchman would close the fine succession of pictures in "The Sunset" with two lines such as one might expect from a professional rhymer of the Bon Marché or the Magasins du Louvre?

"The sun on rich dark clouds sinks slow away
And shuts the gold sticks of his crimson fan."

Nevertheless, Mr. Taylor's work is well and honorably done, and has given to the English-speaking world the opportunity of some knowledge of one for whom Mr. Edmund W. Gosse has claimed, in his "Critical Kitcats," that he is probably, as to mere execution, the most remarkable poetic artist now writing in Europe.

No anti-climax, certainly, mars the strength of this fine sonnet, descriptive of fiery horses, with their no less savage riders, bathing amid the plunging waves of a rocky coast (p. 146):

THE BATH.

Like handsome antique monster, man and beast,
Bitless and free, the sea have entered in,
Midst the gold mist of acrid pulverin—
On fiery sky athletic group expressed.

The savage horse and rustic tamer with zest
Inhale the salty fragrance as with keen,
Abandoned joy their naked flesh and skin
Are by Atlantic's icy stream caressed.

The surge swells, runs, wall-like is piled,
Then breaks. They cry. His tail the stallion plies
Till azure wave in jets transplendent flies;

And with dishevelled locks and aspect wild
Their smoking breasts in passion they oppose
To foaming billows' lashing, angry blows.

Or this, of the Spanish conquerors (p. 113):

THE CONQUERORS.

As falcons from their native eyry soar,
So, tired with weight of their disdainful woes,
Rovers and captains out of Palos rose,
To daring brutish dreams mad to the core.

They longed to seize the fabled metal ore
Which in Cipango's mines to ripeness grows,
And trade-winds willingly inclined their prows
Toward the mysterious occidental shore.

Each eve, athirst for morrow's epic scene,
The tropic sea with phosphorescent sheen
Bound all their visions in mirage of gold;

Or from the fore-deck of their white carvels,
They watched amazed on alien skies enscrolled
Strange stars new risen from ocean's glowing wells.

Mrs. Harriet Prescott Spofford, in her 'In the House of Titian' (Copeland & Day), brings together the work of her later years under a title which well represents that instinct for color which in earlier years almost overcame her, but which she has now learned to control. In its place there yet remains at times a little film or mist, as of delicate lace, between her and her thought, so that while it charms it does not quite master; nor has she ever wholly equalled the lyric chord she struck in her very first published poem, the song, "In a Summer Evening," which so delighted Lowell forty years ago. In this she resembles Celia Thaxter, who was, like her, a child of the pine-trees and the sea, and who never quite caught up with her first verses, "Land-locked." In Mrs. Spofford's present volume there is a fine ballad—vigorous, fresh, free, and with that originality of rhythm which marks so much of her best work (p. 32):

OFF BRETON COAST A THOUSAND YEARS AGO.

Put the boat round, and head her for the sea!
Did I hear, Damrosée? Did you answer me?
Has the wind so sweet a sigh as that whisper which went by?
Oh, bring the boat about, and head her for the sea!

Soft the old gray towers sink beyond the view,
Clouds of wings above them dark upon the blue;
Oh, the rooks come back at night, however long their flight,
But nevermore, Damrosée, those towers encircle you!

Up blaze the bonfires on the great bluff's side,
Tremblingly the bridegroom hastens to the bride;
With many winters' snows upon his head he goes;
Oh, tremble, dotard, like the lights that in your jewels hide!

Tremble! For the tide between yourself and her
Wide swells, and wider, a purple plunderer!
A thousand spears of light, it strikes your startled sight,
And every spear a foeman! and the great winds stir!

Many a time, Damrosée, have I sailed along the lea,
When nights were still and dark, and when glad gales were free,
Seen your towers shine where they stand, and fair, I said, the blooming land—
Oh, fair and broad!—but my dominion is the sea.

Oh, beautiful dominion, where the wild storms bloom,
Where field on field forever flies the foam-wreath's plume,
Where sleep the silver swells, where the moonlight weaves her spells,
Where sunrise like a spirit bursts from the gray gloom!

See, how far above us the bright sail takes its breath!
See, how far below us the great sea darkeneth!
Oh, Damrosée, wild the bliss, heart to heart and kiss to kiss,
With nothing but a tree's stem between our flight and death!

'Lyrics,' by John B. Tabb (Copeland), is handicapped by the multiplicity and extreme brevity of the poems, and a certain general similarity of tone to those preceding; but there is scarcely one of the small pages that does not contain a thought, and hardly a thought without a gem of originality. The curious resemblance to Emily Dickinson still continues; thus, the following might have come from either of them (p. 97):

INDIAN SUMMER.

No more the battle of the chase
The phantom tribes pursue,
But each in its accustomed place
The autumn hails anew:
And still from solemn councils set
On every hill and plain,
The smoke of many a calumet
Ascends to Heaven again.

Or this (p. 28):

LIVERY.

Old-fashioned raiment suits the Tree:
Tho' flouting winds are fain
To strip the foliage, presently
He patterns it again;
Fastidious of chivalry,
Rejecting as in scorn
All other than the panoply
His ancestors had worn.

Sometimes there is promise of a more lyric and melodious quality than we have before attributed to this poet, as in the following (p. 29):

SLUMBER-SONG.

Sleep! the spirits that attend
On thy waking hours are fled.
Heaven thou canst not now offend
Till thy slumber-plumes are shed;
Consciousness alone doth lend
Life its pain, and Death its dread;
Innocence and Peace befriend
All the sleeping and the dead.

And the author has extended his range so far as to include a few sonnets, as thus (p. 185):

POE.

Sad spirit, swathed in brief mortality,
Of Fate and fervid fantasies the prey,
Till the remorseless demon of dismay
O'erwhelmed thee—lo! thy doleful destiny
Is chanted in the requiem of the sea
And shadowed in the crumbling ruins gray
That beetle o'er the tarn. Here all the day
The Raven broods on solitude and thee:
Here gloats the moon at midnight, while the Bells
Tremble, but speak not lest thy Ulalume
Should startle from her slumbers, or Lenore
Hearken the love-forbidden tone that tells
The shrouded legend of thy early doom
And blast the bliss of Heaven forevermore.

In Mr. E. C. Stedman's volume, 'Poems Not Before Collected' (Houghton, Mifflin &

Co.), we gladly recognize the conscientious workmanship that is invariable with him, but are compelled to admit the presence of that larger element of the occasional and even the mechanical which is apt to mark the later productions of poets, and especially of those as much given as he to laborious task-work in the way of editing and criticising. We find him, however, at his best in the brief lines "On a Great Man Whose Mind Is Clouding" (p. 115), and in this exquisite poem on the deaf, dumb, and blind maiden, Helen Keller. Much as has been written on that rare and beautiful personality, this is the best yet achieved (p. 39):

HELEN KELLER.

Mute, sightless visitant
From what uncharted world
Hast voyaged into Life's rude sea,
With guidance scant;
As if some bark mysteriously
Should hither glide, with spars aslant
And sails all furled?

In what perpetual dawn,
Child of the spotless brow,
Hast kept thy spirit far withdrawn—
Thy birthright undefiled?
What views to thy sealed eyes appear?
What voices mayst thou hear
Speak as we know not how?
Of grief and sin hast thou,
O radiant child,
Even thou, a share? Can mortal taint
Have power on thee unfearing
The woes our sight, our hearing,
Learn from Earth's crime and plaint?

. Not as we see
Earth, sky, insensate forms, ourselves,
Thou seest, but vision-free
Thy fancy soars and delves,
Albeit no sounds to us relate
The wondrous things
Thy brave imaginings
Within their starry night create.

Pity thy unconfined
Clear spirit, whose enfranchised eyes
Use not their grosser sense?
Ah, no! thy bright intelligence
Hath its own Paradise,
A realm wherein to hear and see
Things hidden from our kind.
Not thou, not thou—'t is we
Are deaf, are dumb, are blind.

Messrs. Copeland & Day, whose establishment may be regarded as the Bodley Head of American poets, give us other thin volumes of varied merit from their different bards. Mr. John Vance Cheney, in his 'Out of the Heart of Silence,' offers nothing essentially different from what he has heretofore produced; Miss Hannah Parker Kimball includes in her 'Victory, and Other Poems' a single poem, "The Daughter of Herodias," which, although Browningish and also somewhat repellent, shows a power which she has not heretofore exhibited; while Mr. Richard Burton, in 'Memorial Day, and Other Poems,' shows a distinct advance, in various directions, upon his previous work. One of the most striking of these newer compositions, and one which has historic interest as the only portrayal of a unique and wholly American situation, is the following (p. 16):

THE RACE OF THE "BOOMERS."

The bleak o' the dawn, and the plain is asmoke
with the breath of the frost,
And the murmur of bearded men is an ominous
sound in the ear;
The white tents liken the ground to a flower-meadow embossed
By the bloom of the daisy sweet, for a sign
that the June is here.

They are faring from countless camps, afoot or
ahorse may be,
The blood of many a folk may flow in the'r bounding veins,
But, stung by the age-old lust for land and for
liberty,
They have ridden or run or rolled in the mile-engulfing trains:

More than the love of loot, mightier than woman's
lure,
The passion that speeds them on, the hope that
is in their breast;
They think to possess the soil, to have and to
hold it sure,
To make it give forth of fruit in this garden
wide of the West.

But see! It is sun-up now, and six hours hence is
noon;
The crowd grows thick as the dust that muffles
the roads this way;
The blackleg stays from his cards, the song-man
ceases his tune,
And the gray-haired parson deems it is idle to
preach and pray.

. . . . . .

And over the mete away the prairie is parched
and dry,
A creature of mighty moods, an ocean of moveless waves;
Clean of a single soul, silent beneath the sky,
Waiting its peopled towns, with room for a host
of graves.

The hours reel on, and tense as a bow-cord drawn
full taut
Is the thought of the Boomers all: a sight that
is touched with awe;
A huddle of men and horse to the frenzy pitch upwrought,
A welter of human-kind in the viewless grip of
Law.

. . . . . .

High noon: with a fusillade of guns and a deep,
hoarse roar,
With a panting of short, sharp breaths in the
mad desire to win,
Over the mystic mark the seething thousands pour,
As the zenith sun glares down on the rush and
the demon's din.

God! what a race: all life merged in the arrowy
flight;
Trample the brother down, murder, if need
be so,
Ride like the wind and reach the Promised Land
ere night,
The Strip is open, is ours, to build on, to harrow
and sow.

. . . . . .

So, spent and bruised and scorched, down trails
thick-strewn with hopes
A-wreck did the Boomers race to the place they
would attain;
Seizing it, scot and lot, ringing it round with
ropes,
The homes they had straitly won through fire
and blood and pain.

. . . . . .

While ever up from the earth, or fallen far
through the air,
Goes a shuddering ethnic moan, the saddest of
all sad sounds;
The cry of an outraged race that is driven otherwhere,
The Indian's heart-wrung wail for his hapless
Hunting Grounds.

In 'Aphroessa, A Legend of Argolis,' by George Horton (London: Unwin), the author, who is understood to be an American, seems to us to have done what Keats feared to do, and to have touched too late the beautiful mythology of Greece. In 'Trialogues,' by William Griffith (Kansas City, Mo.), we have a little book which would hardly, one would say, have come into existence had not John Davidson and Kipling gone before it in its very measures. If intended to be simply an imitation, it must be pronounced successful. Mr. Henry Hanby Hay's 'Trumpets and Shawms' (Philadelphia: Arnold) shows a distinct advance upon the rather crowded rhetoric of his earlier work, and interest is added to the volume by a preface from Hall Caine, addressed to the author as to a fellow-Manxman, though now a resident of the United States. Mr. R. W. Gilder scarcely does justice to his growing reputation in coming before the public in such very small volumes as 'For the Country' (Century); but he has the example of Whittier before him in this respect, and the same excuse with Whittier, that he writes as one with a message, which is, in this case, a manly and simple love of country. If to this can be added a touch of inspiration, the result is a fine one, and this was not always present in Whittier, nor is it wanting in Gilder. Even Lowell showed it, we must remember, in only one ode out of his four. Were patriotism all, there is enough and to spare of it in the curious volume of Japanese poems, 'Poetical Greetings from the Far East' (Tokio: Hasegawa), which, rendered successively through a German adaptation by Dr. Florenz and an English version by A. Lloyd, are presented in all the fulness of Oriental paper, and still retain a pleasing flavor of heroism and cherry orchards.

Is it possible that Canada, so long kept in the background and discouraged, has suddenly become possessed of two gold mines—in her Klondike range and in her poets? We called attention, long since, to the prominence rapidly being assumed by Mr. Carman, Mr. Roberts, and Mr. Campbell among the writers of this Continent, and the little book called 'Ballads of Lost Haven: A Book of the Sea' (Lamson) has in some degree restored to Mr. Carman the leadership which he seemed to have risked by dallying too long amid Bohemian bowers. It is a hundred pages of salt sea, without a trace of Kipling, and yet having a sea-flavor as unmistakable as his, and with a finer touch—with less of repetition, less of mere technicality, and a more varied human interest. It has, withal, a quality of grace which is surely legitimate, when we consider that the sea itself, which is the strongest thing on this planet, is also the most graceful. A single poem like "The Master of the Scud" in this volume is, at any rate, enough to make a reputation, and no one who has ever sailed in a coasting schooner or ever watched a mackerel fleet into Gloucester harbor on the edge of a gale, can help being thrilled by the strong movement of the poem we quote (p. 29):

A SAILOR'S WEDDING.

There is a Norland laddie who sails the round sea-rim,
And Malyn of the mountains is all the world to him.
The Master of the Snowflake, bound upward from the line,
He smothers her with canvas along the crumbling brine.
He crowds her till she buries and shudders from his hand,
For in the angry sunset the watch has sighted land;
And he will brook no gainsay who goes to meet his bride,
But their will is the wind's will who traffic on the tide.
Make home, my bonny schooner! The sun goes down to light
The gusty crimson wind-halls against the wedding night.
She gathers up the distance, and grows and veers and swings,
Like any homing swallow with nightfall in her wings.
The wind's white sources glimmer with shining gusts of rain;
And in the Ardise country the spring comes back again.

. . . . . .

The dusk is long and gracious, and far up in the sky
You hear the chimney-swallows twitter and scurry by.
The hyacinths are lonesome and white in Malyn's room;
And out at sea the Snowflake is driving through the gloom.
The whitecaps froth and freshen; in squadrons of white surge
They thunder on to ruin, and smoke along the verge.
The lift is black above them, the sea is mirk below,
And down the world's wide border they perish as they go.
They comb and seethe and founder, they mount and glimmer and flee,
Amid the awful sobbing and quailing of the sea.
They sheet the flying schooner in foam from stem to stern,
Till every yard of canvas is drenched from clew to ear'n'.
And where they move uneasy, chill is the light and pale;
They are the Skipper's daughters, who dance before the gale.

. . . . . .

They love the Norland sailor who dares the rough sea play;
Their arms are white and splendid to beckon him away.
They promise him, for kisses a moment at their lips,
To make before the morning the port of missing ships,
Where men put in for shelter, and dreams put forth again,
And the great sea-winds follow the journey of the rain.
A bridal with no morrow, no welling of old tears,
For him, and no more tidings of the departed years!
For there of old were fashioned the chambers cool and dim,
In the eternal silence below the twilight's rim.
The borders of that country are slumberous and wide;
And they are well who marry the fondlers of the tide.
Within their arms immortal, no mortal fear can be;
But Malyn of the mountains is fairer than the sea.
And so the scudding Snowflake flies with the wind astern,
And through the boding twilight are blown the shrilling tern.
The light is on the headland, the harbor gate is wide;
But rolling in with ruin the fog is on the tide.
Fate like a muffled steersman sails with that Norland gloom;
The Snowflake in the offing is neck and neck with doom.
Ha, ha, my saucy cruiser, crowd up your helm and run!
There'll be a merrymaking to-morrow in the sun.
A cloud of straining canvas, a roar of breaking foam,
The Snowflake and the sea-drift are racing in for home.
Her heart is dancing shoreward, but silently and pale
The swift relentless phantom is hungering on her trail.
They scour and fly together, until across the roar
He signals for a pilot—and Death puts out from shore.
A moment Malyn's window is gleaming in the lee;
And then—the ghost of wreckage upon the iron sea.
. . . . . .
And there when daybreak yellows along the far sea-plain,
The fresh and buoyant morning comes down the wind again.
The world is glad of April, the gulls are wild with glee,
And Malyn on the headland alone looks out to sea.
Once more that gray Shipmaster smiles, for the night is done,
And all his snow-white daughters are dancing in the sun.

We do not wish to take too great a liberty with Mr. Carman by counting him in among American poets after his announcing himself, through an interview in *Black and White* about a year ago, as an "intense imperialist"; but as he has, so to speak, furled his sails and come to anchor in the peaceful harbor of Scituate, Mass., he must take the consequences. It is a great pity that some arbitration treaty could not settle for us the question of literary domicile. Why, for instance, should we habitually claim as American, through the accident of his birth, Mr. James, who probably could not find his way about New York, or Bret Harte, whose very heroes and heroines could not now make themselves at home in California; while on the other hand we do not include Mr. Kipling, who dwells half the year in Vermont, and sails out of Gloucester, and belongs to the American Authors' Guild? In the meantime let us welcome, wherever we find it, that touch of genius which makes the whole world akin.

CHILDREN'S BOOKS.—II.

'The Slambangaree, and Other Stories,' by R. K. Munkittrick (R. H. Russell), is a collection of whimsical sketches, most of them very short and very slender, but pleasing in a small way. The title story, though the longest, has little originality—being merely a variant of the plum-pudding nightmare theme—and compares unfavorably with "The Turtle's Story," for instance, which is the last and one of the least in the book.

The ever-dear, kind, tiny, and powerful fairies hold the field in 'Prince Uno' (Doubleday & McClure Company). Children will never tire of hearing and reading about these little people—so small that only years of fruitless search can convince them that they may not some time, by extra good luck, meet one in the woods or garden, and be offered the three magic wishes which bring lasting content.

'Icelandic Fairy Tales' is the title of a thick book, translated and edited by Mrs. A. W. Hall (Frederick Warne & Co.). She has, says the preface, changed and softened some of the incidents to make more suitable reading for children, and doubtless this was needed. There is still enough left, as in all these Northern tales, of savage giants and greedy ogresses to satisfy the primitive instinct for horrors which most children possess and most parents are loath to foster.

The exactly opposite taste, the taste for the prosaic, will be gratified by Amy E. Blanchard's 'Three Pretty Maids' (J. B. Lippincott Company). This is one of those stories which enthusiastic young girls tell each other "might really have happened just so." No doubt self-love has something to do with such praise. If such every-day girls are worth writing a book about, the importance of all commonplace girls is increased. These pretty maids, however, are not unwholesome company, and their wise mothers' and grandmothers' counsels may profit more girls than the three to whom they are addressed.

Though its title-page names a list of books by the same author, Ruth Ogden (Frederick A. Stokes Company), 'Little Homespun' is one of those loose-jointed, halting stories which usually betray the beginner. Not the strictest propriety of tone nor the greatest elevation of moral enforced can prevent the conclusion that, when a writer's fourth or fifth book shows such artistic incompetence, it is time for a faithful friend to advise her to try cooking, making paper flowers, or some other less exacting profession.

A dear old lady, whose husband was notoriously tyrannical and ugly, once stopped a younger woman who was saying something in presence of a discerning child about unhappy marriages. "Unhappy marriages!" cried she, with a glance at the child; "why my dear, you know very well there's no such a thing." A similar warning ought to have been given Dolf Wyllarde, the author of 'A Lonely Little Lady' (Dodd, Mead & Co.). As a piece of writing, the book is better done than many child's stories, but its introduction of unnatural family relations makes it unhealthy reading for any child, except such an unfortunate as Henry James's Maisie, who sadly "knew it all already."

E. R. Herrick & Co. reprint in attractive form, and with liberal illustrations by Blanche McManus, some of Dr. Watts's best known 'Divine and Moral Songs,' under the title 'Childhood's Songs of Long Ago.' This was a happy thought, for the pieces are too good to lose; but it will perhaps be hard to persuade children to take the volume as seriously as some of the "divine" songs deserve, because the pictured children do look so very funny in their antiquated clothes.

A tale of frontier life in that past when the "Far West" was no idle form of words is 'An Oregon Boyhood,' by Louis Albert Banks (Lee & Shepard). This boyhood began in a one-roomed log-cabin little less than a half-century ago, and, in the years that followed, a wide-awake, open-eyed boy saw much that was worth recording. The book is written with quiet dignity, content to do without the sensational.

Why Mr. S. R. Crockett—"and him a minister, too"—should have picked out chapter 36 of his 'Sir Toady Lion' (Frederick A. Stokes Co.) for the invidious comment, "There is no moral to this chapter," is hard to see. Are we to infer that the rest is approved—for instance, Hugh John's "gospel of dasht-mean," which is, that to avoid being "dasht-mean"—a depth of ignominy—you must give and take hard knocks, but never appeal to constituted authority to right your own and others' wrongs? "Too good boys not allowed to read this book" stands for legend on the fly-leaf (an inscription, by the way, which might make it just a trifle lacking in compliment as a gift-book). We imagine a strict *censor morum* would wish to reverse it, and allow only the too good, prim, priggish, inactive fellows to read a book where the rough, careless, and selfish boy receives so much encouragement. That the book is written with technical skill far beyond the ordinary, and is full of good things for the old boys to chuckle over, it is needless to say—no part more so than the immoral chapter. But these touches of nature are most to be enjoyed when boyhood is far enough behind to rob the acknowledgment of former kinship of its shame.

'Mother Goose in Prose' is a large and rather sumptuous book by L. Frank Baum (Chicago: Way & Williams). Perhaps we have been mistaken in imagining part of Mother Goose's charm to lie in the sketchiness of her songs, which have left ample room for childish fancy; and if so, this book, which tells it all out in detail, as why and how the Man in the Moon came down too soon, and shows a picture of him doing it, will fill a long-standing, if not long-felt, want.

The Ruins and Excavations of Ancient Rome; A Companion Book for Students and Travellers. By Rodolfo Lanciani. Boston: Houghton, Mifflin & Co. 1897.

Prof. Lanciani is known in this country chiefly as the author of two popular works on ancient Rome. The one was made up of a course of lectures which he delivered in various American cities in 1886; the other consisted, in part, at least, of articles which had appeared in periodical literature. These were unsystematic books, in which he did not profess to treat a subject with any degree of exhaustiveness. They differ widely from his new volume, which is, as its title shows, a handbook for students and travellers, intended primarily for use in Rome itself. But it would be a mistake to suppose that this is anything like the ordinary guide-book. In fact, Lanciani is incapable of inflicting upon the reader a dull mass of facts, a dry manual crammed with merely useful and necessary information. His imagination is too exuberant, his fancy too free to be confined within such limits. Accordingly, we find here, as in his earlier books, that charm of language and that richness and variety of anecdote which made them such delightful reading. Lanciani has also

a great advantage over the every-day writer of a manual of topography or a guide-book. The latter is generally a mere compiler; but our present cicerone is a man of independent learning, one who was for years in charge of the excavations undertaken by the Italian Government; and to hear from him the story of the ruins of Rome is to listen, like Dido to Æneas, to one who, in telling the tale, can add at every turn *quorum pars magna fui*. He is also a man of wide reading in unusual and mediæval authors, and his browsings in their heavy old tomes or his hunts through the sketch-books of artists of the Renaissance furnish him with many an interesting anecdote of the past and invaluable picture of palaces or temples which might be otherwise lost for ever.

This volume, of a little over 600 pages, is divided into four books. The first describes the fundamental lines of Roman topography —the site, geology, climate, water supply, walls, and roads. The second is devoted to the Palatine hill. Book III. is entitled 'A Walk through the Sacra Via from the Coliseum to the Capitoline Hill.' In Book IV., the rest of the city is described in an order which follows the *regiones* or wards of Augustus. The volume is illustrated with half-a-dozen double-page maps, a number of smaller maps and plans (some taken from the author's great 'Forma Urbis' now in course of publication), and about 200 process cuts, chiefly from drawings and photographs prepared expressly for this book. The work is, as a whole, by far the best which has appeared in English upon its subject; and even professed scholars will find in it much material which is not contained in the larger and more detailed books by German topographers.

Here, then, Lanciani appears for the first time before an American public in his proper character, that of a professional archæologist, treating his subjects in a systematic manner. The book, therefore, while not lacking the attractive style of his earlier writings, is free from that attempt to please a merely ephemeral and uncritical audience which was too often apparent in the others. For example, the sort of over-enthusiasm which led him, in his 'Pagan and Christian Rome,' to find in Tacitus, in Suetonius, and even in inscriptions, evidence that the Christian faith was accepted by various noble families as early as the time of Domitian, is here carefully curbed; and Acilius Glabrio is put in his proper place, in the reign of the Antonine, instead of in the first century. In this book, too, chapter and verse are given for the more important statements, and at the end of the description of each building, or the treatment of each leading topic, a brief bibliography is appended for the aid of those who desire a more detailed knowledge.

Among the best and most original parts of the book may be mentioned the section on the water supply and the drainage of ancient Rome, a real *urbs pensilis subterque navigata*, as Uncle Pliny justly called it; the account of the walls, the various systems of which are described, from the original stockade down to the elaborate fortifications of to-day; of the private houses on the Palatine—for example, Cicero's, which was owned at different times by seven different persons known to history. The chapter on the Sacra Via is also full of interest, although the large plan which accompanies it, otherwise excellent, is turned in the direction exactly opposite to that to which we are accustomed in plans of that locality. Another attractive part is that in which Lanciani describes the early settlements of Antemnæ and the Terremare in order to draw from them a picture of what prehistoric Rome must have been. But the most novel thing in the whole book is his full account of the very recent investigations which have led Italian archæologists to conclude that the Pantheon, as we have it, is not the actual building of Agrippa, but an entire reconstruction made in the time of Hadrian.

The maps and plans, particularly those of the *regiones*, will be found very useful. It is strange, however, that in the midst of so much new work we should find that the general plan of the Palatine hill is a mere reduction of the one which Lanciani published in his 'Guide au Palatin' in 1873; it is naturally now incorrect in details, and, in fact, it does not wholly agree with the smaller plans of parts of the hill printed in this very book.

Lanciani is not always happy in the inferences which he draws from the Latin authors. His interpretation of a passage is apt to be overstrained, if not absolutely false. Thus, there is nothing in Pliny, *N. H.*, 36, 24, 2, to prove that Agrippa himself was actually rowed into the Cloaca Maxima (p. 15), nor any detailed description in Horace, *S.*, 1, 8, 15, of Mæcenas's work in reclaiming the Esquiline (p. 100). It is more than doubtful whether the second ode of Horace's first book has any reference to the flood of the Tiber in 23 B. C. (p. 16). It seems hardly possible that this ode could have been written after the settlement of the Empire in 27 B. C.

Mechanically considered, the volume is on the whole creditable; but it is a great pity that publishers cannot find a paper which will "take" process cuts without being so heavy as to make a book a burden to hold. This one is, for its size, really tiresome. There is a useful appendix in it, containing lists of emperors, popes, painters, sculptors, and architects; tables of money, weights, and measures; and a list of the varieties of ancient marble. There are also two special indexes, but no full general index, which is much to be regretted.

Decorative Heraldry: A Practical Handbook of its Artistic Treatment. By G. W. Eve. London: George Bell & Sons. 1897. Sm. 8vo, pp. 281.

It is a genuine surprise to meet with a treatise on heraldry presenting any novelty of design. With the revival of interest in heraldic studies, the public has been presented with innumerable text-books and guides; but as the rules are few and simple, and the symbols most formal and arbitrary, the various manuals have differed only in respect to the expense of the book. Mr. Eve has started a new idea in trying to extend the scope of heraldry, not only by calling attention to the beautiful examples of former ages, but by attempting to connect heraldry with other forms of decoration used in remotest times, as by the Egyptians, Assyrians, Greeks, and Persians. We cannot concede that his examples have any relation to heraldry, and yet it is interesting to notice the artistic relation between decorations of entirely differing purposes. For example, on p. 69, he figures a design from Serpoula in Chaldea, of immense antiquity. It represents a lion-headed eagle displayed, grasping with its claws the backs of two lions passant in opposite directions. The treatment is entirely heraldic—that is to say, the posture of the eagle is entirely artificial, but distinctly decorative. Yet the emblem, whatever its intent, has nothing in common with personal heraldry, including the hereditary feature. So, again, in the designs upon their coins and gems, the Sassanian Kings bear a most curious head-dress, an inflated ball surmounting the helmet. This seems to have been the peculiar device of the monarch, yet it has no counterpart in heraldry, though these Kings also used in their head-dress a crescent and a star, both favorite heraldic devices. Again, a statue of Sapor I. given by Rawlinson ('Seventh Oriental Monarchy') might almost be thought to represent a European King of the days of chivalry. He wears a mural crown of a strictly conventional type, his sword, baldric, and armored shoes are of a mediæval type; yet there is not the slightest reason to suspect that Persian art influenced that of Europe.

Mr. Eve has done well, however, in bringing forward examples of heraldic designs gathered from the churches and palaces of England and the Continent. The great gain to art by the new processes of photography and photo-engraving is here clearly shown. During the fifteenth and sixteenth centuries, heraldry was an art, and occupied a distinct and honorable branch of the arts of sculpture and painting. Now that these masterpieces can be reproduced at trifling cost by engravings, it is to be hoped that Mr. Eve will find followers.

Our author touches new ground, also, in his remarks about heraldic engravers. He points out that the herald-painters possessed the true artistic spirit, keeping within well-recognized limits in their drawings, and yet animating these with life and grace. But when heraldry appeared in print, the decline was rapid and distressing. The illustrations in Gwillim's 'Heraldry,' in the middle of the seventeenth century, are not only poorly engraved, but badly drawn. They are not archaic, but uncouth; an affected coarseness not resulting from mechanical ignorance, but from want of taste. As the art of engraving improved, however, the heraldic taste was steadily vitiated. The Peerages, with their hundred of examples of coats-of-arms, led the fashion; and while the wood-engravers rapidly improved in technique, it was all in the wrong direction. The lion dropped from the realms of heraldry to the level of the menagerie, until the Debrett of 1830 looks like a revised edition of Goldsmith's 'Animated Nature.'

The Victorian era, by its revival of the study of Gothic architecture, arrested the decline of heraldic art, and has witnessed a revival and improvement even more rapid than the fall. Perhaps the turning-point was the publication by John Henry Parker of Oxford, 1847, of Henry Gough's 'Glossary of Heraldry.' Here not only were the illustrations clearly drawn and well balanced, but the figures of animals were distinctly copied from better authorities. Evelyn Shirley's 'Noble and Gentle Men of England' was another example of the new school; and the genealogical magazines, the *Miscellanea Genealogica et Heraldica* and Nichols's *Genealogist*, helped the cause. Above all, as Mr. Eve states, the Peerage

and the Baronetage edited by Joseph Foster in 1880-2 firmly established the new school. The late Dom. Anselm and J. Forbes Nixon were the artists, and their work is most admirable. The revived taste for bookplates is fostering a school of designers of which T. Erat Harrison seems to be a worthy leader.

We cannot conclude without the melancholy reflection that American art has so far done nothing for heraldry. We have State coats-of-arms, and various town and city shields, besides many private examples. Our public attempts are simply atrocious. The national coat-of-arms is simple and appropriate; but the collection of our State shields is a gallery of horrors. Regardless of the evident fact that a national symbol should be simple and distinctive, something for the unlettered to recognize and remember, with hardly an exception our States set forth for a shield a panorama of emblems, full of petty details, utterly unfit for decorative purposes. The thirty-odd cities of Massachusetts have seals of which not over one or two are even passable. Boston has a seal overloaded with inscriptions, but the centre is taken up with a landscape view of the city with vessels and boats in the foreground. And this monstrosity stands when any herald would have jumped at the chance to place instead a tri-mountain, properly delineated with a few bold strokes. Worcester has an admirable seal, a crowned heart, for the "Heart of the Commonwealth." Somerville has a good idea, injured by too much detail, viz., a Minuteman. The remainder of the cities have railroad trains and sawmills, bridges and school-houses, each worse than its fellows. When heraldry as an important part of decorative architecture is recognized and studied in the United States, we may hope to see some of these faults corrected.

The Decoration of Houses. By Edith Wharton and Ogden Codman, Jr. Charles Scribner's Sons. 1897.

One opens a new book on decoration with a weary anticipation, remembering how much has been lately written on the subject for Americans, and to how little purpose; but now the whole style and practice of decoration has changed, and the teaching of the last generation has become obsolete. 'The Decoration of Houses,' a handsome, interesting, and well-written book, not only is an example of the recent reversion to quasi-classic styles and methods, but signalizes the complete reaction that has thrown to the winds, even before the public discovered it, perhaps, the lately accepted doctrines of constructive virtue, sincerity, and the beauty of use. The authors take the new ground uncompromisingly, snap their fingers at sincerity, have no horror of shams, and stand simply on proportion, harmony of lines, and other architectural qualities. "Any *trompe-d'œil* is permissible in decorative design," they say, "if it gives an impression of pleasure." To this have we already come; yet it seems not to have produced harmony between the outside and the inside of their volume.

The thread of their discussion is historical. Its fifty illustrations, taken from Italian, French, and English interiors, with a somewhat omnivorous appetite, are of various interest; but the book is the fruit of study, and of a larger knowledge of examples than has commonly been the case with its predecessors. It is aimed, not at professional readers, but at the public, whom it instructs with many intelligent criticisms and sensible directions, calling their attention to artistic aspects of decoration which have been neglected by writers of the last dispensation. It touches the root of present difficulty when it says, in the preface, that "the vulgarity of current decoration has its source in the indifference of the wealthy to architectural fitness." But, to the authors, architectural fitness means agreeable proportions and combination of lines, and no more.

The temptation of the literature that we have left behind was that any ready-witted writer could discourse magisterially about decoration; and, inasmuch as his material was pure theory, it called for neither experience nor knowledge, nor yet for artistic or technical acquirement; in truth, after the beginning, the writers were mainly literary men and amateurs. Nevertheless there were valuable truths in their writings, and principles which, under due limitation, should have infused freshness, vitality, and manliness into decorative work. If these have been forgotten before they have borne their due fruit, the fault may have been in the narrowness, vehemence, and want of technical enlightenment with which they were urged. But whether we are morally wise, or historically, the things we need for decorative work are taste and instinct for form—qualities which still wait their development among Americans. Till these are evolved, we must either intrust ourselves to professional hands, or be left to vibrate between the dicta of dilettanti on the one hand and doctrinaires on the other.

BOOKS OF THE WEEK.

Bamberger, Ludwig. Studien und Meditationen. Berlin: Rosenbaum & Hart.
Banks, Martha B. Castle Daffodil. Boston: Pilgrim Press. $1.

HATCHARDS.

This is the favorite BOOKSTORE, and for 100 years the resort of the smartest people in London. It is visited and patronized by all who love books. London is the great market for books, and all the best as well as the cheapest editions can be had by writing here. Special collections formed, and fuller information supplied than from any other house. Books, both old and new, and relating to any subject, can readily be supplied, at very moderate prices.

Agents for Clubs, Libraries, and all private collectors.

187 PICCADILLY, LONDON, W.

Little Journeys

To the Homes of Famous Women.

By ELBERT HUBBARD. Being the series for 1897. Printed on deckel-edged paper, and bound in one volume, with portraits. 16mo, gilt top, $1.75.

Uniform with the above:

Homes of Good Men and Great.
Homes of American Authors.

The 3 vols., as a set, $5.25.

"The series is well conceived and excellently sustained. The most captious critic could not suggest an improvement. Never was there more satisfactory packing, in more attractive shape, of matter worth at least ten times the money. Such books as these ought to be circulated in the schools; they are full of instruction, and must inevitably whet the young appetite for what is healthy, bracing, and developing in pure literature."
—*Buffalo Commercial.*

The Series for 1898 will be

Homes of American Statesmen.

School Agencies.

FOR COLLEGE POSITIONS IN THE WEST,
Apply to ALBERT & CLARK, Pullman Building, Chicago.

SCHERMERHORN'S TEACHERS' Agency. Oldest and best known in the U. S. Established 1855. 3 E. 14th St., N. Y.

Teachers, etc.

PH.D.—SUCCESSFUL COLLEGE IN- structor (fifth year in charge), seeks for next September a responsible post in a Department of Romance Languages. She is proficient in French, Provençal, Italian, and Spanish, Philology and Literature, having studied in American and European Universities. Address ECOLE DES HAUTES-ÉTUDES, care *Nation.*

CHARLES W. STONE, Tutor for Har- vard, 68 Chestnut Street, Boston.

School Trustees, Principals, Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. About 10,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Advertising rates, 15 cents a line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 208 Broadway, N. Y.

Each with heliotype frontispiece. 12mo, $1.00.

The North Italian Painters of the Renaissance. In preparation.

G. P. PUTNAM'S SONS,
New York and London.

Important Historical Work.

France Under Louis XV.

By JAMES BRECK PERKINS, author of "France Under the Regency."

2 vols., crown 8vo, gilt top, $4.00.

"This book makes more fascinating than ever the story of the decay of the ancient *regime*. No striking colors are used in depicting the characters of that fateful epoch, no eloquence is used in summing up the evils of its political conditions, but the pages are none the less full of light and feeling—white light and calm feeling, such as thorough knowledge and judicial temper naturally create."—*The Outlook.*

"Mr. Perkins's volumes are the most authoritative attempt yet made to present to English readers the history of the reign of Louis XV. and the Pompadour. . . . Few writers could so successfully have avoided the errors and pitfalls for the historian of so complex politics and civilization as that of France in the eighteenth century, or carried the work to such successful completion."—*The Dial*, Chicago.

Sold by all Booksellers. Sent, postpaid, by

HOUGHTON, MIFFLIN & CO., Boston,

THE MACMILLAN COMPANY, 66 Fifth Ave., New York.

The Nation.

NEW YORK, THURSDAY, DECEMBER 23, 1897.

The Week.

The fortnight's session of Congress which ended on Saturday seems to have settled one thing about the question of civil-service reform. Despite all the talk about radical legislation on the subject, it is generally agreed that no bill will be sent to the President. Many Republicans of the Senator Gallinger and Representative Grosvenor school would be very glad to support a measure undoing a large share of the work which has been done since 1883, but comparatively few of that party are ready to vote for the repeal of the original act passed in that year. On the other hand, many Democratic Senators and Representatives would gladly vote for repeal, because they either do not believe in the merit system or want to "put the Republicans in a hole," but they do not propose to support modifications which would remove from the protection of the rules a large number of their own party. The general expectation, therefore, is that in the end Congress will do nothing, and the entire responsibility of making any change will thus rest upon the President. This is most fortunate, as it will be much easier to bring public sentiment to bear upon one man than upon the hundreds of Senators and Representatives.

It is most fortunate that the spoilsmen in Congress insist upon a thorough discussion of the whole subject of civil-service reform. Such a discussion is exactly what the advocates of the merit system most desire. They want the office-mongers to have a chance to offer to the public all their objections to the competitive method, with an equal opportunity on their own part to submit the other side of the case. The spoilsmen had their innings in the House, and on December 15 there was presented in the Senate the strongest demonstration ever yet made of the immense saving in efficiency and cost to the Government of the application of the reform. Mr. Carroll D. Wright, Commissioner of Labor, is the most eminent statistician in the United States. His bureau is under civil-service rules, while the Census Office, of which he has also had charge, has not been. Mr. Wright shows from the records that the cost of production in the Census Office for the same amount of matter in its reports is nearly 179 per cent. greater than in the Department of Labor; or, excluding from consideration the enumerators and special agents employed in census work outside Washington, almost 147 per cent. greater. On this latter basis, the saving in taking the last census, if the employees had been selected by the competitive system, would have been nearly $3,400,000.

But this contrast between the Labor Bureau under the rules and the Census Office outside them, is only one illustration of a distinction between the two systems which holds true everywhere. The competitive method since 1883 has been applied to nearly all the employees of the Government in the departments at Washington, outside the Census Office, and to tens of thousands of other federal employees in post-offices, custom-houses, and elsewhere throughout the United States. The efficiency of employees selected on the basis of merit has been so marked that the number required in the various Washington offices grew only from 13,374 to 15,963 in the thirteen years between 1883 and 1896, or less than one-fifth, while during the same period the growth of the business done has been immense, several times as much matter being turned out of the Government Printing-Office now as formerly. Such convincing facts and figures as these will now secure the attention of the people, and they will remove any lingering doubts which may remain in the minds of candid men as to the complete vindication of civil-service reform by the test of experience. The result must be such an uprising of public sentiment against the scheme to overthrow the system, as will make short work of it.

There could hardly be a more striking illustration of the absurdity of our diplomatic system than the treatment of the mission to China. The place has been filled most admirably for a dozen years by Charles Denby, who was appointed early in Cleveland's first administration. He is ready to remain, and the ordinary arguments for retaining a well-qualified minister, who has the benefit of long experience, are reinforced by the critical situation of affairs in China now, and the doubtful outlook for the future. It is the simple truth to say that there is no place in the diplomatic service which at present makes larger demands upon the incumbent, and no place where the highest order of ability and training will be more urgently demanded during the next four years. In such an emergency as this, President McKinley removes the able and experienced representative of the United States in China, and nominates as his successor a young man who not only is without any knowledge whatever of diplomacy, but also is without ordinary common sense, having made himself a laughing-stock at Washington. It really is so grotesque a performance that it would seem incredible if we were not hardened to it by long experience of the spoils system.

The President has nominated Attorney-General McKenna for the Supreme bench as the successor of Justice Field. This has been expected ever since the Californian was selected for the cabinet last winter, as Judge Field's retirement was then known to be impending, and it seemed inconceivable that a man would resign the life place on the circuit bench which he held, for the uncertainties of the attorney-generalship. This intermediate step, as it has all along been regarded, has proved to be a most unfortunate one for Mr. McKenna. As Judge of the Circuit Court on the Pacific Coast, he was little known to the country at large, but the fact that he had reached this position raised a certain presumption in his favor. As Attorney-General, however, he has been called upon to decide a most important question, as to the discriminating-duty clause which was smuggled into the Dingley tariff bill; and the opinion which he rendered was so obscure and blind in its reasoning that it raised the gravest doubts as to his fitness for any high position. There are only nine members of this court, and they ought to be nine of the strongest men that the legal profession has developed in the United States during their lifetime. It is not enough to say of a possible candidate that "he is a good-enough man," or that he has ability enough so that he will probably not bring discredit upon the court. It is an affront to the bar that a lawyer so poorly equipped for the place as Mr. McKenna should be given one of the great prizes of the profession, while it is a misfortune for our highest court that its character should be lowered at a time when it needs rather to be more firmly established in the popular respect.

The bill to prohibit pelagic sealing by American citizens was passed by the House on Thursday. It had previously passed the Senate. So now, for the first time, it is unlawful for Americans to take seals on the high seas. Three or four years ago Secretary Gresham and Sir Julian Pauncefote came to an agreement that the sum of $425,000 should be paid as damages for the seizure of British sealing vessels under the decision of the Paris tribunal, subject, of course, to an appropriation by Congress. The House committee having the matter in charge reported a bill appropriating the money. The bill was defeated mainly by the efforts of Mr. Hitt, the present chair-

man of the committee on foreign affairs, on the express ground that a large part of these claims were those of rascally Americans who were violating the laws of their own country by pelagic sealing, and who had put their ships under the British flag for that purpose. This unsupported statement was swallowed raw by the Republicans of the House and by a sufficient number of Democrats to defeat the appropriation. Now the same Mr. Hitt carries through the House a bill, to do what? Why, to make a certain act unlawful which he said and persuaded the House to believe was unlawful before.

The facts in the case were that Congress had never made pelagic sealing outside the three-mile limit unlawful, but the executive branch of the Government had committed itself to the doctrine that such sealing was unlawful *per se*, and had assumed the right to keep foreigners as well as our own ships out of Bering Sea. When this right was disputed, a clumsy attempt was made in 1889 to pass a bill expressly forbidding the catching of seals in Bering Sea by anybody. Such a bill passed the House, but the Senate amended it so as to limit it to "the dominion of the United States in the waters of Bering Sea," which dominion was simply the three-mile limit known to international law. Now, at this late day, after all the expenditure of wind power and sawing of the air that has been heard and witnessed during ten or twelve years, Congress has found out that pelagic sealing has been a lawful vocation all the time for our sailors as well as for those of other nations, and that all the seizures and warnings and other steps taken by the Treasury Department have been unwarranted usurpations of power. This is a humiliating confession to make, although it need not be so to the present head of that department. It follows, of course, that the reasons advanced for throwing out the bill appropriating money to pay the Paris award, viz., that it included the claims of rascally Americans who were violating the laws of their own country, were wholly nonsensical and unfounded.

Attached to the bill prohibiting American citizens from pelagic sealing is a clause prohibiting the importation into the United States of "fur seal skins taken in the waters mentioned in this act." The purpose of this clause is to make pelagic sealing unprofitable by cutting off the principal market for the skins. This is entirely within our right, and the only objection to the clause is that it is not stringent enough to be fully effective. There is still a sealing industry on or around the Shetland Islands and another off the coast of South America. These are not large, but how are our customs authorities to distinguish between the catch in one place and that in another? The bill, to be effective, ought to prohibit the importation of any such skins whatever in any shape whatever. Very likely such prohibition would render the industry so unprofitable that pelagic sealing would cease without further ado, and save us from any more shirt-sleeves correspondence, to which, we observe, Mr. Foster has made a fresh contribution under date of December 2, charging the Canadians with "unneighborly" acts, in the winning style of former communications.

The executive committee appointed by the Indianapolis convention last February—the same that selected and organized the present Monetary Commission—has decided to call a new convention after the commission shall have made its report. It will be an entirely new body, not a mere reassembling of the individuals composing the old one, and will be chosen by the Boards of Trade and other commercial organizations of the country. It will meet at Indianapolis on Tuesday, January 25. The present executive committee, of which Mr. H. H. Hanna is the chairman, was authorized to receive the commission's report, present it to Congress, and endeavor to secure the enactment of laws in accordance therewith. They thought, however, that it would be a wiser plan to call a new convention of business men similar to the former one, in order to convince Congressmen that the commercial classes are really earnest in their desire to have something done looking towards the withdrawal of the Government from the banking business. Such a convention and the preliminary steps for bringing it together will have the effect also of stirring local opinion and promoting neighborhood discussion, which will perhaps have more influence on congressional opinion than the report of the commission or any abstract document could have. It is a mistake to suppose that Congress, or either branch of it, is against currency reform *per se*. On the contrary, it is in favor of whatever it imagines the constituencies want. Mr. H. H. Hanna's committee is therefore right in taking steps to reach the constituencies before laying the commission's report before Congress.

The convention of Southern bankers at Atlanta on December 15 was in general harmony with the Indianapolis movement. The resolutions, unanimously adopted, ask that the Government be taken out of the banking business and that the banking business be taken out of politics; that the greenbacks and Treasury notes of 1890 be retired and cancelled, and that banknotes be substituted therefor; that banking facilities be extended to the smaller towns; that our various forms of currency, now eight in number, be reduced to two, namely, banknotes and specie; and finally, that the Bankers' Association of each Southern State be requested to appoint a delegate to go to Washington and aid in securing legislation in accordance with the foregoing resolutions. There was no suggestion in the Atlanta resolutions that State banks be allowed to issue notes free from federal supervision.

The cut in wages in the cotton-spinning industry at Fall River, which has been preparing for some time and has excited a great deal of discussion, was announced last week. It is equal to 11 per cent. and a fraction more, and it includes officers as well as employees. It is not yet known what answer the operatives will give, but the step taken seems to have been imperative, the alternative being the closing of the works. This is not a case of a temporary glut of goods, which needs time in which to work them off. The trouble is more deep-seated. It lies in the fact that, for one reason or another, cotton-spinning can be done more cheaply in other parts of the country, and particularly in the Southern States, than in Massachusetts. The nearness of the Southern factories to the raw material is of no consequence in comparison with wages and hours of labor. Southern wages are considerably lower than Northern, and the hours of labor are not 58 per week, as in Massachusetts, or 60 per week, as in Maine, but 66 and in some places 72. The skill and efficiency of Southern labor have been improving steadily. This improvement will go on, and will tell in favor of the Southern mills until hours and wages are equalized North and South. This equalization must be effected in one of two ways, or perhaps in both. Either the Southern must go up to the Northern level, or the Northern must come down to the Southern level.

Is there anything to be said about the Dingley tariff in connection with this cut in wages at Fall River? Not much—the less the better, we think; for the Republican papers, we observe, have very few comments to make, and they allude to the subject as "Fall River's New Wage Scale," instead of Fall River's Wage Reduction. According to the Dingley theory, this ought to be a period of advancing wages. Dingley himself tells us that the country is prosperous and that the prosperity is due to the protective tariff that bears his impress. Whether the country is prosperous or not, is hardly worth disputing about, because it is a question that each man answers for himself. Each one, whether employer or employee, knows whether his capital or his labor brings him a fairly good return or not. It is very certain that if the men of Fall River could be polled they would deny Dingley's thesis stoutly. And yet we cannot say that Dingley has done anything

to cause this cut in wages, but merely that he has done nothing to prevent it. He and his kind are to blame for imagining that they could do anything to prevent it, and they will get punished at the polls in due time for holding out the hope and expectation that they would prevent it. One lesson tariff-wise this event does teach, and that is that protection was not needed to build up the cotton industry of the South. It came to life in spite of the competition of New England. No tariff ever helped it to the extent of one farthing. Nor would it be less prosperous if all tariffs were removed to-day. It stands on bedrock and will outlast all the protective tariffs imaginable.

It is now officially admitted in Havana that Col. Ruiz, the aide of Gen. Blanco, who went out to parley with the insurgents, was shot by them. Whether he had a formal safe-conduct does not appear; but that he and his superiors thought he had what amounted to that, is clear. Otherwise he would not have gone to certain death. The best the Cubans can say is that he was invited to go out and talk "as a friend," but that, the moment he began to refer to accepting autonomy, he violated the understanding, became an enemy, and had to be shot. But this is to put a thin veneer over what is essentially an act of savagery. We should be glad to hear from some of our congressional experts on "atrocity" their opinion of this slaughter of Col. Ruiz. Suppose the case was reversed and it was a Cuban emissary lured within the Spanish lines to be shot down in cold blood. What would happen in that event we know, because we know what happened when the rumor that Antonio Maceo had been ambushed—and so killed—convulsed, or appeared to convulse, Congress and the nation. Several newspapers at once declared war on Spain, in consequence, and interviewed able "jurists" on their right to do so. Yet here is a much more flagrant violation of the laws of war and of civilization, which seems to be unquestionably authentic, while the Maceo story was instantly shown to be an invention; but we hear nothing from Morgan, Lodge is silent, and all the other orators who erstwhile were so eloquent on "Butcher" Weyler and the inhuman Spaniards, are dumb. Other messengers have been sent out on the same errand to various parts of the island, and it is said that not one of them has returned or been heard from. The insurgent officers, it is credibly reported, have offered these agents of Blanco's a simple choice—joining the rebel forces or death. In the face of this condition of things, the ending of the war through a compromise on a home-rule government for Cuba seems impossible. It is a waste of time to go on offering compromise to people who shoot the very men bearing its terms.

How rapidly the great navies of the world are becoming a sort of Frankenstein to the nations that create them, may be seen in an important parliamentary paper, lately published in London, setting forth the total naval expenditures of the leading countries. The British empire, of course, heads the list, with an annual outlay on sea-going force of $126,000,000, or more than one-fifth of the entire revenue. France comes next with an expenditure of $64,000,000; the United States follows with $30,500,000; then come Japan with $29,700,000; Russia with $29,000,000; Germany, $21,000,000; Italy, $20,500,000; and the little fellows straggling along with all the millions they can afford. The document in question also gives statistics relating to the mercantile marine, annual clearances of shipping, and gross foreign trade, which, taken together with the figures of the fighting navy and the sums spent on it, ought to be thoroughly digested by statesmen at home and abroad who prate about "trade following the flag" and commerce won as a trophy of war.

Two main reasons are given for the way in which increasing naval expenditures are thus heaped upon the backs of taxpayers. One is the need of keeping the navy up to date. A man-of-war becomes obsolete in type in a few years. This is Emperor William's plaint; it is not that he wants so many more ships, but that the old vessels must be replaced with those of the latest construction. But by the time these are built, there will be a later construction, and so on, world without end. Then there is the great strategic need of each country's ordering its own navy so as to bear a certain relation to other navies. Here again the frank Wilhelm enlightens us. Germany, he says, must increase her fleet that she may have a naval strength nearer that of France or England. But see how this apparently simple problem in proportion is really insoluble. Germany's new ships will be the signal for France to order more. English naval authorities already say that they will build a new squadron as soon as the Reichstag votes the Emperor his added cruisers. Then he will be again just as badly off, relatively, as he is now, and the work will have to be begun all over, only to prove again just as futile. But the naval contractors like it; they have the advantage over Sisyphus that they get rich while rolling the stone up the hill. Nor does Emperor William fail to use the argument which all other advocates of a fighting navy use—namely, that he wishes only to put himself in a strong defensive position, and so restrain the hot heads who otherwise might attack him. This is what they all say. Not one of them would use a war vessel aggressively. Heaven knows, they would not wrong the weakest by attacking. Now it is obvious that if such vows were put in writing, or in a general treaty, the need of a fighting navy would vanish. All would be bound not to attack, and so no one would be compelled to prepare for defence. But any shipbuilder, we are sure, could expose the fallacy that lurks in this.

The writer of the article in the *Revue des Deux Mondes* of two or three months ago, "Who Will Exploit China?" was more of a prophet than he knew. The calm way in which the various nations are preparing now to treat China as they have long been treating Africa—seizing harbors and islands and marking out "spheres of influence"—is a striking comment upon the "Yellow Terror" which the bimetallists have been parading in Europe, and in this country, too, for a few years past. The Chinese were going to crush Western civilization by industrial competition. They were going to "dump" on our devoted shores bicycles and watches in awful quantities. Of course, it was their silver standard that enabled them to do this, and of course the only way for us to prevent it was by going to the silver standard ourselves. This was the great "Yellow Terror" as put on exhibition in Congress and House of Commons. Well, here are the Powers walking up to the Yellow Terror and finding nothing terrible about it; helping themselves to the Yellow Terror's best with the coolest cynicism. It would be interesting to know the official Mandarin view, at the present moment, of the White Terror.

The news that Russia has at last taken the final step necessary to place herself on the gold standard is as important as the news about her taking possession of Port Arthur, or aspiring to supremacy in Korea, or proposing to continue occupying first place in all that relates to the Eastern Question. It is, in fact, to be regarded as strictly related to all these plans for advancing Russian prestige and power. A great and progressive nation, with intricate and expanding international relations, simply cannot remain a silver-standard nation. The two things are inconsistent. The silver standard is the note of a backward or barbarian people, and Russia is determined to shake off any such imputation. Whether her expansion and immensely heightened power, which now seem inevitable, are to come through peace or through war, the gold standard is a necessity. It means security and stability and a soundly based commerce in peace, and it means the highest purchasing and borrowing power in war—and wars are more and more won or lost by money. But it is quite possible that the silverites may consider the Russian adoption of gold another sign of their own success.

CROSS-EXAMINING THE SECRETARY.

Secretary Gage appeared before the House committee on banking and currency on Thursday, and made a quiet and satisfactory explanation of his plan for currency reform. When we say satisfactory, we do not mean that the advocates of reform ought to be satisfied with it as a finality. Nor do we think that Mr. Gage himself looks upon it in that light, but rather as the best thing that there is any present chance of carrying into effect by legislation. It will always be a question whether this plan, or the more radical one of retiring and cancelling the greenbacks, would be the more feasible in case Congress should prove deaf to all suggestions of reform, thus compelling its advocates to go before the wider forum of the people. On such a question the judgment of the Secretary must be accepted. He is the one responsible for methods of reaching the result at which he aims. If there is a failure it is his failure, and so long as his methods are really towards the desired end, he is entitled to the support of all those who wish to gain that end.

What Mr. Gage aims at was stated by him in very clear and simple terms. It is first to commit the country more thoroughly to the gold standard. The present bonds are payable in "coin," and although the laws require the Secretary to keep the two kinds of coin—silver and gold—at par with each other, some doubt hangs over the public mind, which Mr. Gage would like to remove. Hence his proposition for refunding the public debt in a 2½ per cent. bond payable specifically in gold. Such a refunding, he thinks, would save the Government about $10,000,000 per year in the way of interest. This would be an incidental gain, but it is not the chief end of the bill.

The Secretary's next aim is to make the demand liabilities of the Treasury a manageable quantity, first by separating its functions as a bank from those as a receiver and disburser of taxes, and second by curtailing the amount of the demand liabilities outstanding, and third by doing this in a way which shall not contract the circulation in the hands of the people. The plan involves the collection of $200,000,000 of those demand liabilities in the Treasury and the issue of an equal amount of national bank-notes. He estimates that if this plan could receive the sanction of Congress the Treasury would have no more trouble with greenback redemption, with the "endless chain," or with the maintenance of parity between silver money and gold money.

Here the cross-examination of the Secretary began. Mr. Brosius wanted to know how the parity of the two metals could be maintained if the Government's demand obligations were withdrawn from circulation and accumulated in the Treasury. The drift of this inquiry, as disclosed by subsequent questions, showed that Mr. Brosius and other members of the committee look upon the Government as the fountain of gold, and apprehend that if this fountain is dried up, the public will not be able to get any to pay their foreign debts with. Mr. Gage said very properly that there would still be a sufficiency of demand obligations outstanding for this purpose, but that the public would simply ask the banks for gold when they wanted it instead of asking the Government. Here Mr. Gage's cross-examiners came out strong, and wanted to know what would happen if the banks when called on for gold should refuse to pay it. Mr. Gage said that they must pay in legal-tender money, which would always bring gold. If they did not pay in legal-tender money the Government would seize their assets according to law and turn the same over to their customers. "But how if they pay silver instead of gold?" asked one member. Silver dollars are legal tender; how will the public obtain gold to pay their foreign debts with if the banks pay silver dollars instead of gold or greenbacks?

Mr. Gage's answer was twofold—first, that the banks would not do anything of the kind, because it would not be for their interest to do so; second, that in such a case the obligation imposed on the Treasury to keep the two kinds of money on a parity with each other would be imperative and would be obeyed. Then he gave some illustrations of banking methods out of his own abundant experience, which must have tended to soothe the fears of his friends on the committee. The questions put to him show how the bad education of the greenback régime has indoctrinated the public mind with false conceptions of money. The spectacle of the Government furnishing gold on demand when wanted by the mercantile community for legitimate trade or by the public in a panic, and the difficulty that the Government has experienced in obtaining it, have led many people to think that without the hoard in the Treasury there would be no gold, and that if there were no greenbacks available, merchants would go through the streets wringing their hands because they could get no gold to pay their foreign debts with. This conception ignores several patent facts. One is, that whenever the Government runs short of gold, it applies to the banks for a fresh supply and always obtains it. Another is, that it is no more difficult for a bank to pay gold than it is to pay anything else. In the panic of 1893 they did pay gold as long as they paid anything.

Another fact is, that banks always pay the kind of money that their depositors want, because it is for their interest to be on good terms with their customers. The only instance in recent years when they have refused either to pay gold or to draw gold from the Treasury for their customers, was when they were trying to protect the Government against a panic run. Even in this case they paid greenbacks when they were demanded, with which the depositors could draw gold from the Treasury if they wished. In no instance—not in the severest pinch—was a tender of silver dollars made. Such a tender to an unwilling customer would probably have precipitated a special run on the offending bank and closed it up. At all events, no such thing ever happened. It is within recollection that on several occasions the banks have voluntarily tendered gold to the Treasury, independently of bond sales, tens of millions at a time, with no other purpose than to quiet public apprehensions. And yet men can be found in Congress who think that the banks, rather than pay gold to their customers on demand, would take silver certificates and carts to the Treasury, draw silver dollars $30,000 of which weigh a ton, bring those back to their own vaults and pass them over the counter in payment of checks, with the certainty that every customer so treated would become an enemy of the bank, and would transfer his account elsewhere the next day.

SUBSTITUTES FOR THE PRIMARY

One of the most cheering signs of the times is the steadily increasing distrust of the primary among the better class of politicians. The old delusion that the only way in which to secure more desirable nominations is to "go into the primary," has clearly seen its best days. For the first time almost in the history of the Republican party in this city, the entire Better Element refused last week to be enticed into the machine primaries. Heretofore most of them have weakened at the last moment, and, "for the sake of the party," have consented to put themselves once more into the hands of a lot of political rapscallions who gain possession of the party in order to use it for their personal benefit. What Platt did in the last campaign did not differ in kind from what he has done many times before, but the situation forced him to do it more openly than ever before. There was, in fact, no answer to such questions as these: Should we not have been better off without any organization at all than with the one we had? Would not all Republicans then have voted for Low, and would he not have been elected? Without the regular organization, would Tracy ever have been put in the field, or, if he had been put in the field, would he have polled votes enough to enable Tammany to win?

Going into the primaries with the Plattites and their kind is, in fact, like going into a faro bank with a select

company of honorable gentlemen and proposing to the proprietor and his associates to unite with them to reform the game. You will either be thrown into the street at once with a broken head, or swindled of your money and put out later. The men who run the primary game are in possession, have all the tricks of the business at their command, and can always command support enough to enable them to overcome or outvote any amount of reformers. If by any chance they are defeated in a contest, all they have to do is to appeal to the "regularly constituted authorities" of the party, and their opponents will be set aside as "irregular," and they themselves reinstated in power as "regular." Such is the law of this State, as prepared and enacted under machine guidance, and as interpreted by the Court of Appeals.

Reform of the primary being hopeless, the only course for the advocates of honest nominating methods to follow is to seek such measures as will make the primary powerless. The first step in this direction is to let it alone—leave it, as the Hon. Jacob Worth would say, to "stew in its own juice." Let its nominations stand for what they are—nothing except those of the machine. The next step is to oppose these nominations with really good ones, and in this field there is much opportunity for thought and suggestion. As we have said repeatedly, one method is always at hand, and that is the nomination by petition as authorized by the new ballot laws which are in force in most of our States. Platt has done his utmost to destroy the usefulness of that right in this State, by placing the number of signatures to a nomination petition so high as to be prohibitive in many localities. A systematic effort should be started at once to get these provisions amended. The voters of the State are now aroused to the merits of the subject, and it will do much good to arouse them still further. A refusal by Platt and his legislators to amend the law will be certain to add to the popular disgust with him which has already made his doom certain in the near future.

A method of nomination otherwise than by petition has been devised by Mr. F. M. Brooks, an active anti-machine Republican of Brooklyn, which is worthy of consideration. He proposes the institution of a nominating ballot system, to be put in use at all the polling places on the days of registration. A fixed number of citizens, say fifty or more, according to the importance of the office, could by petition get the name of any man whom they wished to be nominated, placed upon a nominating ballot. They would have to make oath that they belonged to a particular party, and were in sympathy with its principles. The names of all candidates thus properly presented to the Election Bureau would be arranged in order under the various offices and divided into party groups. That is to say, under "Republican" could be arranged all candidates of that party, and under "Democratic" all candidates of that party. When the voter registers he can be handed one of these nominating ballots, and, going into a booth, can mark the candidates whom he would prefer to see nominated. The voting would be continued through all the days of registration, and the box containing the ballots would remain unopened till the close.

Mr. Brooks proposes a law providing for this system, and requiring that the name of the person receiving the highest number of votes in each party for each office shall be the nominee of that party, and have his name printed as such on the official election ballots. He argues that as a larger number of citizens register at every election than vote on Election Day, his system would be likely to secure a very general expression of opinion from the voters, and would thus work naturally to defeat any efforts of the professional politicians to control it.

The first objection which will occur to students of such matters will be that since no effort can be made at the time of registration to ascertain the politics of a voter, there can be no check upon the right of the members of one party to take a hand in the nomination of candidates of the opposite party. The politicians of both parties could, in fact, combine to help one another nominate the candidates of their choice. Of course, the Republican who voted for a Democratic nominee would deprive himself of the opportunity to vote for any Republican nominee, and vice-versa. Mr. Brooks thinks that this fact would act as a sufficient regulation, and it might do so, but there are conditions under which it would almost surely fail to do so. Any man who voted on both sides would have his ballot thrown out.

The plan is worth considering. It would depend for its efficacy, if enacted and put in force, upon the willingness of the people who desire good government to take the necessary trouble to secure it. If they failed to bestir themselves sufficiently to get good names upon the nominating ballots, the professional politicians would get the names of their men there, and would control the system as easily as they control the present primaries. The great merit of the Brooks plan is that it takes the nominating machinery out of the hands of a lot of people in a room. Anything which brings a company of men together in a room to make a nomination produces inevitably a machine of some sort. Somebody has a plan for "running the meeting," and in that necessity, for it is a necessity, lies the germ of the political machine. Nomination by petition rids us of this, and so does nomination by the ballot as proposed by Mr. Brooks.

LITERATURE AND POLITICS.

The question has been raised in *Literature*, by its American correspondent, apropos of Mr. Cabot Lodge, whether a man can be "a successful politician of the partisan type" and at the same time "a conscientiously equipped man of letters," both of which the writer says Mr. Lodge is. We admit that he is a successful politician of the partisan type, but can a man of this kind be "a conscientiously equipped man of letters"? Without meaning to make too much of Mr. Lodge, as an example, we must doubt it extremely. "Successful politicians of the partisan type" are very common both here and in England. Platt, Quay, Gorman, Disraeli, Chamberlain, among others, are of this type, but in all these cases it has been found that this partisanship was incompatible with literary success in any field but fiction. In fiction a writer does not need to be conscientious. Nobody expects him to put any conscience into his work unless he chooses. What he has to do is to make his book sell and not outrage decency. Consequently, it was easy enough for Disraeli to write successful novels, and Chamberlain and Quay might readily compose a 'Utopia' or a 'Voyage to the Moon,' without drawing on any qualities of character except diligence.

But if any of these men chose to write history, or moral or philosophical essays, the question of their sincerity and truthfulness would at once come up. Do they believe what they say? Are they in the habit of making statements for other purposes than diffusing opinions honestly formed and honestly held? Would they knowingly misrepresent a fact for the purpose of achieving concealed ends? These are inquiries which are inevitably made when a man presents himself to the public either as a narrator or as a moralizer. People want to be sure, before they read him, that he has taken pains to ascertain the truth, and that the triumph of this, and not party triumph, is his chief aim. For this reason, for instance, John Morley is held to be a "conscientiously equipped literary man," but no one will claim for him that he is "a successful politician of the partisan type." Mr. Gladstone is a successful politician of the partisan type, but, in spite of his many great qualities, nobody will call him a successful literary man. Disraeli was a very successful politician and novelist, but if he had undertaken to write history or moral essays, the world would have laughed.

The reason is, that it is impossible to become a preacher or a trusted narrator without character, and political success does not make character. There are many successful politicians whom sober-

minded people habitually designate as rascals. Character consists, not of occasional spurts of goodness, or the occasional utterance of ennobling sentiments, but of habitual devotion to one's ideals of truth and justice; and the foundation of all these things is sincerity. Sincerity is the basis of good living. To have the reputation of it people must feel sure that you yourself believe what you utter, through their knowledge that throughout your career you have seemed to do so. It is not enough that, as they say of the New York politicians, you "pull straight this time." They must know you have always been "pulling straight." Suppose Platt were to write a history of New York politics during the last twenty years; who would buy it or read it, except through curiosity or for fun? And yet it might be truthful, and he might say that for this work he was "conscientiously equipped."

The world has found, in fact, that the successful practice of partisan politics involves frequent departures from the truth, frequent misrepresentations, frequent pretences that you hold opinions which you do not hold; the habit of saying in private what you do not say in public; the practice of measuring men's reputations by their value to your own party, and judging measures by the attitude of the party towards them, rather than by their importance to the country. Rightly or wrongly—we think rightly—people believe, on an overwhelming mass of testimony, that the effect of these things on character, when long practised, is destructive; that no man can serve party and serve conscience, and that if he succeeds in politics he does so at the expense of many of the finer qualities of the soul, and more especially of those which enable him to write effectively of duty, or honor, or patriotism.

It is easy enough to apply these canons to Mr. Lodge's case. He pretended to be a silver man, and asked for a discriminating duty on British goods to punish England for being a gold nation. In two years he was denouncing Bryan's silverism, and clamoring for the gold standard for us. He pretended for months to know that Great Britain had encroached on Venezuelan territory, and to know even to what extent in square miles. It now appears he could not have known anything of the kind, because nobody knew it. We cite two plain cases. There are several others which only excite suspicion. But they are sufficient for the public to rule Mr. Lodge out of the category either of conscientious politicians or of conscientious literary men. He is one more illustration of the incompatibility of the position of successful politician and of that of the man who writes for instruction or elevation, or, in fact, for anything but entertainment.

We are far from holding that the career of a demagogue may not be a useful, or even a necessary one. In modern as in ancient democracy, the work of getting people to vote in one way or another, on questions they do not understand, or do not understand fully, must be done by somebody, and it cannot be nice work. It is, of course, as full of temptations as the work of a courtier. It invites flattery, humbug, and misrepresentation in about equal parts, and these are temptations which every man who pursues the calling, cannot be expected always to resist. The utmost we can expect from most men in it is that they shall abstain from the grosser forms of deception, or, in other words, shall be as good as the circumstances will permit, and never go further than seems necessary. An adherence to this rule on the part of leading Republicans would have stopped the silver craze in the seventies. A persistent but unnecessary course of pretending to believe what they did not believe, on the part of the leading men of the party, of whom Mr. Lodge was one, at last produced that shape of dread, "Bryanism."

Indulgent as the public may be to the demagogue, it will seldom or never excuse his setting up for a moralist, or claiming "conscientious equipment" as either an historian or an essayist. It insists on his lying in the bed he has made for himself, on his playing the rôle he has deliberately assumed for himself. No man need be a demagogue unless he pleases. A hundred other ways of usefulness are open to him, especially if he has a fortune. But he must choose, and stick to his choice. The only display of conscience which the world allows him is the proof that he does not "deceive all the people all the time," and that he does the dirty work, which somebody must do, as well as he can. But it does not permit him to walk from the caucus to the professor's chair, and, after having arranged with Barney to euchre Jake, to talk to us of faith, virtue, and knowledge, of the martyrs of duty, and of the heroic souls who "died as the fool dieth," for principle.

THE QUESTION OF CHEAP BOOKS.

English publishers have been for some weeks agitating and organizing to put an end to the practice of selling books at a discount from the list price. Their aim was to introduce in England something like the German system, with the bookseller only a sort of agent or servant of the publisher, and bound to maintain published prices or be driven out of business. After formulating their proposals, the publishers submitted them to the Authors' Society. Without the assent and coöperation of writers, the plan would not, the publishers confessed, be practicable, and, as they wrote, would be "necessarily dropped." The Authors' Society returned an adverse report on November 30, and the plan must, therefore, be considered dropped.

But it opens up the whole question of cheap books and sales at a discount, which is a question having many relations to human nature and morals, as well as to the interests of author and publisher. This is not the first time that a project of this kind has been urged. In the years 1848-52 a very general effort was made in the English publishing world to keep up the prices of books. At that time, too, many authors refused to join the movement. Dickens declined to lend his sanction; so did Carlyle and Darwin and Tennyson. They maintained two propositions: (1) that it was to the advantage of both writer and public that books should be cheap; and (2) that, even if it were not, it would be impossible to prevent evasion of any publishers' agreement that might be made. If booksellers did not cut under list prices, tailors or grocers or stationers would. There is no doubt a deep-seated instinct of the human heart in the shape of a strong desire to buy books, like other commodities, at something "off." "Inside" prices and the "most-favored-nation" discount do, in truth, appeal to a powerful passion in mortal breasts. The ravages of it we have seen in painful form, and we are not sure that we have not at times suffered from them ourselves.

The real difficulty, from the point of view of a close corporation, or iron-clad agreement, among publishers, is that there is no law, human or divine, by which they have the sole right to print and sell books. This truth was set forth with much force by the committee of the Authors' Society. Granting the desirability of keeping up the prices of books, there was no way of compelling a popular author to do it. If he knew that he could sell 20,000 copies at $1, as against only 5,000 at $2, he would have the publishers at his mercy. He could print his book himself, or get a draper or a department store to do it. And if it were said that he would be kept out of the regular channels of the trade, the answer would be that one of the big shops often sells more books in an hour than a country book-store does in a year. It thus appears that book-publishing is, in the nature of the case, not a business which can be monopolized, or made into a Trust, even if the majority of authors were willing to see it done.

Authors are, from their nature, bound to advocate cheap books. They all expect great popularity and unbounded influence; they know they can obtain it only by enormous sales, and enormous sales go with low prices. Hence they cannot really wish prices to be high. Many of them are vividly aware, too, that putting a high price upon their books does not mean that sales will be

made at the fixed rate. The proudest author can imagine a purchaser who would buy him at 87 cents, yet who would pass him by at $1.49. When an author has, like Thoreau, to pack away nine-tenths of his first edition unsold, it is no comfort to him to think that his pile of "collected works" of that sort was at any rate high-priced, that not one volume had been sold at the least per cent. "off." The whole issue taken at a most ruinous discount would please him better.

George Sand, in the account she gave of her publisher, Michel Lévy, the great inaugurator of cheap well-made books in France, touched upon most of the essentials of the entire question. Lévy's root idea was that it was better for both author, publisher, and public, that 50,000 copies of a good book should be sold at four francs than 15,000 at eight francs. George Sand expressed her fears as an author, when the scheme was broached to her. There was a vast clientèle nôt then buying books at all, she admitted, that might possibly be won. But could it be held? Attracted by the good book at four francs, would it not be immediately captured by the poor book at two francs, the vicious book at one franc? Possibly for a time, replied Lévy; but the appetite for reading, once acquired, would inevitably lead in the end to the best reading. His forecast proved correct, wrote George Sand; the *format* Lévy and the *format* Charpentier overran France. But this was to base too much on her individual success. No author can think hardly of a public which buys him largely; and George Sand could not be blamed for believing the great sales of her own works at a low price a proof of the soundness of French taste. But what would she say to the cheap books the French are reading now?

Under present conditions of publishing and of copyright, the argument that lovers of cheap books are not necessarily lovers of poor books has one great advantage—the cheapest books on sale are the best books on sale. In English, at any rate, the expiration of copyright and the cheapening in the cost of production of a book, merely as representing so much paper, ink, and labor, have placed the treasures of our literature within reach of the poorest. Critics and moralists have little to say about the extraordinarily low prices at which extraordinarily good books may now be had, but the fact is of the highest literary and moral significance. It is no doubt hard on contemporary authors to be subjected in this way to the fatal competition of "the dead hand of literature," as it has been called; but the influence of a readable Shakspere complete for fifty cents, of Scott and Thackeray and Emerson and Hawthorne at incredibly low prices, must be enormous and cannot be bad. At any rate, cheap books, like low prices, have come to stay. Make of them what we may, no publishers and no writers, be they bimetallic, symmetallic, or polymetallic, can alter the hard facts.

THE DUTCH ARCHIVES.

ITHACA, December 11, 1897.

About Forefathers' Day the thoughts of students interested in colonial or American continental history turn toward the archives of the little country behind the dykes which had once so much to do with the Western World, both through its own commerce and colonists and because of its being the shelter-land of the founders of New England. Two pamphlets recently published by Mr. Charles M. Dozy, the archivist of Leyden, Holland, one of which is reprinted from the *Revue Internationale des Archives, des Bibliothèques et des Musées*, gives a bird's-eye view of the historical materials and the system of storage and classification in the Dutch archives. The central depot is at The Hague. In 1802 the historian Hendrik van Wijn was nominated archivist of the Batavian Republic. He was charged with making an inventory of the important documents previous to 1648, and ordered to report from time to time the result of his inquiries. It was not, however, until 1814 that the state documents of a date previous to 1794, and, a little later, those between 1794 and 1813, were brought together in one place at The Hague. In 1854 the present building now in use, formerly the old house of the Deputies of Amsterdam in the State of Holland and later the palace of the Prince of Orange, became the depository. Before this formation of the central depot, one could consult the 'Conspectus of the Netherlandish National Archives,' published by Bakhuizen van den Brink, the archivist-in-chief and translator of Motley's histories. Since 1887 Mr. Th. van Riemsdijk, with three assistant archivists, has had charge of the national collection at The Hague.

The Provincial archives have been organized, one after the other, since 1802. By the Constitution of 1798, which abolished the ancient sovereign States, they were declared national property; yet it was not until 1877 that the centralization of the provincial and national archives was made, and their curators were put directly under control of the national Government. This has, however, been fully accomplished, so that all the depositories and keepers are under direction of the general archivist at The Hague. Since 1878 their reports, as well as their proceedings at the meeting of the archivists held annually at The Hague, are published annually in the periodical *Verslagen omtrent 's Rijks oude archieven*. Thus there is already an imposing collection of volumes giving lists of inventories or printed manuscripts, under the title "Overzicht van de inventarissen der oude Rijks-archieven in Nederland." It is the design of the Government to construct in each of the different provinces, eleven in number, commodious buildings to hold the provincial archives, in which buildings the danger of fire will be reduced to a minimum. At The Hague the new building, already begun, is to stand on the land directly behind the present edifice in use, and is to cost when finished 545,000 guilders ($218,000).

The very large masses of documents which have accumulated in the hands of notaries and are now in governmental possession, as well as the records which still remain in more or less danger of loss by fire, damp, or carelessness in the local communal archives, are not yet accessible to the public, though it is probable that they will be before long. All the provincial and national archives, however, are free to students and inquirers. The large cities of Amsterdam, Rotterdam, Dordrecht, and Gouda are still discreditably behind the requirements of the age, making use of old-fashioned, ill-adapted, and not altogether safe edifices for storing their priceless treasures; but at Groningen and Leyden are superb edifices. These latter are built in modern style, with almost every conceivable advantage of light, comfort, ventilation, warmth, and safety; and, I may add from personal knowledge, of courteous assistance for research from those in charge. In addition to the manuscript state records and the great mass of printed matter now accessible in books, are large stores of documents illustrating what we may call the wet side of this very much watered country. Furthermore, the student of charities, sociology, hygiene, organized industry, the military and fire departments, and pretty much all that belongs to the life of a municipality, will find in these provincial and city archives amazing riches. There still await, too, some future Brandt, Gieseler, or Schaff, to say nothing of a possible Motley, Macaulay, or Froude, the records of the Reformed churches, of the Jansenists or Old Catholics, and of the Mennonites—the successors of the Anabaptists. Our own American church historian, Dr. E. T. Corwin of New York, is now at work among the archives of that wonderful Classis of Amsterdam, the mother of Dutch, German, and missionary churches all over the world.

Under the appreciative care of the present Queen Regent, there has been erected to contain the archives of the House of Orange-Nassau a handsome edifice, which is to serve both as a library and as a museum. In its reorganization of the service, the Government has sent to Germany, Austria, and France Dr. P. J. Blok, the present occupant of the chair of Netherlandish History in Leyden University; to Russia, Dr. C. Uhlenbeck; to Dresden and Vienna, Mr. J. L. Berns; and to England, Dr. Hajo Brugmans, to make investigation of documents of importance in Dutch history. This special work has been continued from 1886 to the present time. Several societies, like those at Utrecht and at Leyden, also publish documents of value, particularly such as illustrate literature and language. In 1892 the Society of Archivists was founded, which now numbers forty members and meets annually, publishing also a periodical, the *Nederlandsch Archievenblad*. In this, as well as at their meetings, the technical matters relating to their profession are treated in preference to all others, and historic questions are not raised. At the gathering in 1897, a project for a complete organization of the whole system, general, provincial, and local, throughout the entire country, was to be discussed.

Leyden is to-day the chief city of Rijnland, which is the most important part of Holland for the study of hydraulic engineering and the great enterprises of the Water State. It is also the centre of the textile industry of the country. Its City Hall, where so many of the Pilgrim fathers and mothers

went to declare intentions of marriage, was for centuries the depository of thousands of papers from A. D. 1400. At the end of the sixteenth century, Secretary Jean van Hout gathered together the records of the secularized convents and classified and inventoried them, making a collection of about four thousand pieces. At the beginning of the seventeenth century, David Van Royen collected and inventoried the precious "Kenningbocken," which to-day gives Leyden a unique collection of materials for the history of the Dutch judiciary.

There were few followers of these careful and conscientious public servants until 1886, when Mr. Charles M. Dozy began his work, bringing order out of confusion, and facilitating reference both by the native scholar and magistrate and the local or foreign students—as many American, British, and German men of research can testify. Still, the danger and the lack of space until recently have been deplorable. In 1891 the Krantz family stepped in to solve the double problem of safety and of room for storage, by offering the city of Leyden forty thousand guilders to erect a proper edifice for archives. In the autumn of 1893, the precious papers were removed to their new home. This very handsome edifice, which I have examined and in which I have spent some pleasant hours, stands immediately fronting the canal into which came the rescue-boats under Admiral Boisot, when they brought loaves and fishes to the starving multitude at the raising of the memorable siege in 1574. It fronts Boisot Kadé (or Quay), and it is but a few feet away from the canal down which the English Separatists moved with their boats when, through the Rapenburg Canal and the Vliet (or Fleet), they journeyed from Leyden to Delftshaven on their voyage to America. There is abundant room for the eighteen thousand volumes and portfolios, which hold papers and parchments antedating 1852. Documents written or printed since that year are still at the City Hall on the Broadway; the three thousand notarial registers of Leyden lie at The Hague, but will some day, probably, be where they belong and become accessible to the public. Apart from American political origins and interests, when it is remembered that the Congregationalists, Baptists, and Mennonites, to say nothing of the Quakers, must look to Holland as their cradle-land, and when the work of the Venezuela Boundary Commission is recalled, one can see in this reorganization of the Dutch archives matter of interest to many of our American students of history.

W. E. GRIFFIS.

POLITICAL CHANGES IN JAPAN.

TOKYO, November 19, 1897.

It is only on the principle that the darkest moment is just before the dawn that the optimists of Japan can extract any hope from the present political situation. It is all confusion and disappointment, compared with what existed during and immediately after the Chinese war. Then it was generally believed that political parties were so well organized that they were on the point of realizing a condition of fair equilibrium between their aspirations and the actual government of the country. But some evil sprite seems to have interfered with their good intentions, and to have succeeded not only in putting a stop to further party organization, but in demolishing much of the work already accomplished. At present all who have looked forward to a settlement of the political struggle between the Parliament and Government are convinced that an entirely fresh start must be made.

It is easy to see from the course of affairs during the past year what the inherent weaknesses of the cabinet were. Count Matsukata, the Prime Minister, is a man of the Satsuma persuasion, and gave up more than one-half of his Cabinet to Satsuma influences. The Choshu element, represented by Marquis Ito, which has hitherto joined with the Satsuma party, has been absent from the present Cabinet, and in its place has been an independent element, directed by Count Okuma, who has for years been the advocate of a more liberal form of government. Count Okuma secured the coöperation of the powerful Progressive party, the successors of the old Progressionists, in the last session of Parliament. By a skilful use of patronage and other more hidden methods, the Government broke up the National Unionists and Liberals, and reduced the Opposition to trifling dimensions. In this way it scored a complete success against its opponents in the last session. The Progressives were rewarded for their fidelity to the Government. Some of them were appointed vice-ministers of certain departments, others were made chiefs of certain important bureaus, and not a few received the coveted positions of prefectural governors.

But the Cabinet, while successful in stifling the Opposition in the lower house, could not save itself from internal dissensions. Never was there less likelihood of long cooperation between the two elements of which the Cabinet was composed. The Satsuma men in Japan represent the extreme wing of the Satcho principle. Their boast is their domineering and uncompromising attitude toward opposition of any kind, their military tastes, and their dislike of parliamentarism. Their chosen field has always been the army, in which to-day they have a paramount authority in Japan. It was hardly likely that the extremists of the Satcho faction would find it agreeable to pull together with so liberal a representative of parliamentary government as Count Okuma. The latter is, above all, the champion of the commercial, educational, and in general the civil interests of the country. It was only the overshadowing reputation of Count Okuma in the sphere of foreign diplomacy, and his influence over a large political party, that made it necessary to appoint him to a Cabinet position. From the start, however, he was regarded as a disturbing element by the Satsuma wing. Rumors of a split in the deliberations of the Ministry began to be heard almost as soon as the Government was secure from attack in Parliament.

The present Cabinet has never succeeded in winning any popularity either from the public or the press. It was tolerated, and might have been tolerated much longer without open opposition had it only conducted the public business in a manner that was negatively free from criticism. But, apart from its own internal want of harmony, it seems to have gone out of its way to arouse popular antagonism. One of its mistakes was the appointment to the Educational Department of a man who, though generally respected, was totally without experience in education. It is commonly believed that the whole organization of this department is in need of reform, and, judging from the length of time that the public have been clamoring for a change, no one can help coming to the conclusion that there is room for improvement. The substance of this criticism is, that the higher officials of the department, instead of concentrating their attention on matters within their proper sphere, spend their time in venting personal jealousies and in political wrangling. Another cause of irritation to the public was the action of the Government in removing certain officials of the Audit Bureau of the Treasury. Several auditors of great experience and character were summarily removed without cause, so far as the public could judge, except to make room for new favorites. It was thought that this arbitrary action may have been due in part to a want of docility on the part of these officials to the demands of the Government. But, whatever the reason, the whole proceeding was denounced in the public press as high-handed and inexcusable.

Both these acts, however, were secondary to the so-called Formosa scandal. The administration of this new acquisition has long been a cause of bitter denunciation of the Government by the Japanese press. The conduct of the officials who have been sent to administer the island is far from what it should be, and has estranged the natives more and more from their new rulers. The civil officials are accused of nearly every sin of omission and commission, of venality, negligence, and disregard of popular rights. It had been expected that the present Cabinet would introduce a better régime in the island as soon as possible after the budget was passed by Parliament; but, far from this being the case, the conduct of the present Administration, according to the Tokyo press, has, if anything, deteriorated. Property and life are not protected against brigands, and crime is left unpunished.

One of the administrative officials of the island, who also occupied a judicial position, a certain Judge Takano, was summoned to appear in Tokyo during the month of August or September. As soon as he arrived, he was put on the retired list—a change equivalent to dismissal from the service. He refused to accept the order, and, in returning it to the department, denied the power of the Government to dismiss him. He took the ground that his office was guaranteed him under the constitutional provision that a judge cannot be removed except by the ruling of a disciplinary court. The order was again forwarded to him, but he resolutely refused to accept it. The Government, however, determined to enforce its authority. It took the position that Formosa did not come within the scope of the Constitution, that it was, as yet, without the existence of a disciplinary court, but was under the special authority of a Governor-General not responsible to Parliament—in brief, Formosa must be considered a Crown colony rather than an integral part of the Japanese empire. Judge Takano still refused to bow to the rulings of the Government. The press of Tokyo strongly backed him up and made him the hero of the hour. At a large meeting held in his honor he gave the reasons for his action in a speech of great independence and courage. In a few words he explained the conditions now existing in Formosa, and how the island was in a state bordering on anarchy.

"Laws," he said, "are well administered

when they operate in such a manner that their corrective effect is a hundred times greater than their punitive. Justice tempered with mercy is the first principle to be observed in putting laws into operation. The three millions of inhabitants of Formosa are crying out to-day that they cannot obtain security for their lives and property. The reason for this unfortunate state of affairs is that the local police are not sufficiently strong, and the rebels go about freely by day and by night defrauding honest folk who have no means of resisting them, and whose appeals to the police for aid meet with no adequate response."

In the contention between the Government and Judge Takano it seems that the former was not technically wrong. The Constitution of the empire does not as yet extend to Formosa, and therefore the Government had the right to remove an official who was not so much a judge (*hanji*) as a judicial administrator (*hangwan*). But from the point of view of common sense and tact the Government's position is almost indefensible. It assigned no reason for retiring him, though Judge Takano repeatedly demanded from the Government a statement of its grievances against him. Moreover, its action has excited a general belief that the removal was due to the Judge's zeal in exposing the corruption of certain Japanese officials, thus provoking enmity that sought revenge.

Judge Takano refused to the end to submit to the Government's order of dismissal. He returned to Formosa, where he attempted to resume his duties; but the officers in charge were ready to prevent him by force if necessary. The scene threatened to become dramatic, but ended finally in the Judge yielding to the mere display of force. He is now on his way to Tokyo, and at all the important towns in Japan he is receiving the ovations of the people. The whole incident will furnish material to the opposition parties with which to attack the Government during the next session of Parliament.

In the general breaking up of the two chief opposition parties during the last session of Parliament, the seceders were left without any definite leadership or organization. Some of the deserters from the Liberal party (Jiyuto) formed a temporary union known by the name of the Parliamentary Club. It was evident at the time that this was merely a provisional title. At present they have formed a new organization known as the *Kodo Kai* (Reform Association), under the leadership (it is asserted) of some of the Satsuma chiefs of the Cabinet. Whether this body will actually support the Cabinet during the next session of Parliament is extremely doubtful. Some of the newspapers allege that this new party was established for the definite purpose of opposing the Government measures. Its platform is excellent, but is in no wise different from that of any other party; and as its members are chiefly seceders from the older organizations, it cannot expect to secure much popularity. As it numbers about fifty representatives, it may derive a certain advantage from holding the balance of power between the older parties.

Another band of seceders, mainly from the Liberals, has established a separate organization known as the North Eastern Alliance (*Tohoku Domei Kai*). The platform of this party, too, has all the ordinary planks, and is of the most irreproachable kind. Its only novelties are the increase of the salaries of the minor officials and of the members of Parliament, the extension of the franchise and the privilege of representation to the inhabitants of the Loochoo Islands and the Hokkaido. For a time a suspicion prevailed that the condemnation of clan government in the platform of this coterie was merely a subterfuge to cover its real purposes. But this was removed when the leader declared roundly against the present Cabinet. It is now certain that this small faction, numbering scarcely more than fifteen, will be in the front rank of the Opposition during the next session.

Perhaps the most curious miscarriage of the Cabinet during the past six months has been its failure to secure the confidence of the business classes throughout the country. At a meeting of the Tokyo Chamber of Commerce held in the early part of November, to consider the proposed increase of taxes for the coming year, the President of the Chamber gave a long review of the shortcomings of the Government. Among other things he said:

"Up to 1895, the state budgets used not to exceed 80 or 90 million yen, but, in consequence of the post-bellum undertakings, they grew to 200 millions in 1896, and to 240 millions in 1897. The Ito Cabinet compiled a table of expenditures covering a period of ten consecutive years, and the Matsukata Cabinet amended it, making some increases. According to that table there ought to be a surplus of five million yen on the side of revenue in the fiscal year 1898-9, but, on the contrary, there is a deficit of twenty-seven millions. Such figures naturally inspire grave uneasiness as to the future dimensions of the budget. What is to be the limit? What we understand by regulating the finances is not an increase of taxation. Anybody could make ends meet if there was nothing to be done but to collect additional revenue."

A number of members of the lower house, possibly twenty, for the most part business men, who hold the same views as those expressed in the above lines, have formed a Financial Reform Association, the purpose of which is to oppose all further increase of taxation, and to demand a reduction of expenditures, chiefly of the army. In the last session of Parliament the bill was passed to raise the standing army from six divisions to twelve. The members of this association propose to have the increase limited to nine divisions. If the Government accepts this compromise, they agree to support it, but if they meet with a refusal, they pledge themselves to oppose all Government measures to the utmost. As it is hardly within the bounds of probability that a Satsuma cabinet will yield on this point, the members of this organization will throw their influence with the opposition parties. It is worthy of note that this group has at least an intelligent and practicable platform.

All these coteries, hardly deserving the name of political parties, would not seriously embarrass the prospects of the existing Cabinet during the next session, had only Count Matsukata been able to retain the allegiance of the powerful Progressive party and its acknowledged leader, Count Okuma. This party can count at least one hundred members of the lower house, and, had it determined to support the Government in the next session as it did in the last, it could without doubt easily bring fifty more into line so as to secure the necessary majority. But though the Progressives were liberally rewarded for their support in the past session, they have gradually become more and more dissatisfied. They saw that they were not fully taken into the councils of the Government. They lived merely on the outskirts of the official circle, and the Satsuma chiefs never admitted them into inner combinations. Further, as political managers, feeling the pulse of public sentiment, they knew they had gained nothing from their alliance with those in power. Unless they could in some fashion demonstrate that their union with the Government had produced certain beneficial results, they were doomed to lose influence with their constituents. The newspapers were clamoring for certain reforms in the administration, in Formosa and in the Cabinet itself. After the affair of Judge Takano they assumed a tone of indignant remonstrance. The Progressives saw clearly that they must strike a blow for a reconstruction of the Cabinet, or lose every shadow of respect from the public. They finally decided, at a general meeting held in October, to formulate certain demands and lay them before the Prime Minister. The demands were, essentially, the removal of the extreme Satsuma faction from the Cabinet, the reform of the budget, and the reorganization of the administration of Formosa. The most important of these was the first, as it was believed that a unified Cabinet would soon be capable of introducing a more vigorous policy into the various departments of the Government. On the following day (October 21) a deputation of the Progressives was appointed to visit the Prime Minister. The latter received them with courtesy, and asked them whether they came as political friends wishing to talk over the political situation, or as members of a party. To this they replied that they wished to talk over matters of national importance in a friendly manner. The Prime Minister agreed to meet them on these terms, provided the colloquy was not to be published in the papers, but to remain a private matter. The delegates signified their approval of this condition, and then made known their terms.

On the day following this conference the entire discussion between the Prime Minister and the delegates was printed in the regular organ of the Progressive party, and it was represented that there was no friendly colloquy whatever, but rather that the delegates had submitted their demands in the form of an ultimatum, Untrue as the last statement probably was, yet the general outlines of the conference were correctly reported. The Prime Minister thereupon had but one course to take. He transmitted to the delegates a memorandum to the effect that they had not observed the condition of secrecy imposed upon them; and as it now appeared that they had made certain demands upon him, he could only remind them that he held his position from his Majesty the Emperor, and was under no obligations to follow their injunctions or to admit the advice of outsiders. This answer was sufficiently decisive. The Parliamentary members of the Shimpoto met again, and replied to the memorandum of Count Matsukata that they profoundly regretted the publication of their interview with him, but that this was a mere detail. The upshot of the entire affair was the severance of all party relations with the Cabinet, the resignation of a large number of officials appointed to offices from among the leaders of the Progressive party, and finally the resignation of Count Okuma himself.

The new appointees to the vacancies have been almost entirely of Satsuma proclivities. Never before has Japan had a Cabinet so free from anti-Satsuma influences. But this *pure* Satsuma combination, as the Japanese call it (*Jun Satsu-ha*), has perhaps less support from the press, the public, and the political parties than any cabinet that has held the reins of power since the introduction of Parliamentary government into Japan. Daily rumors are spread abroad of new combinations between the Satsuma clique in power and particular parties and factions, who are to support it in the coming session. But whatever attempts have been made in this direction, they have so far entirely failed. It is almost certain that whatever political parties or individual members support the Government in the next session will suffer in popularity with their constituencies, and no people in the world are more sensitive to changes of public opinion than the Japanese. A general impression exists that the Cabinet will fail in its efforts to secure sufficient coöperation. In this event it will have to resort to dissolution and a new election for relief. An imperial rescript convening Parliament on the 21st of December has been already issued, and, when the session opens, the forces of Government and Parliament will once more oppose each other to decide whether or not clan government shall keep possession of the field. G. D.

Correspondence.

ASSOCIATION FOOTBALL.

To the Editor of The Nation:

Sir: A few years ago, I felt the necessity of differing from you on the subject of football. But the experience of the last three or four years, while not, perhaps, leading to a complete reconciliation, has led me to believe that your attitude toward the brutalities of the game, as played in America, is one that should receive the attention it well merits. To attempt to do away entirely with a sport which commends itself so heartily to a large community, composed of spectators who are keenly interested in a well-contested competition, and also of that growing number of relegated heroes who once felt the dash of glory on the field, is to rob a large number of citizens of a privilege they have a right to enjoy. But to strip the game of its savage character—better, to substitute something that will satisfy us all, spectators and players—is another thing.

Perhaps my personal experience may be of some value, with this object in view. I began as player, progressed to the position of referee, even being in at the death of a worthy young man, whose life was uselessly sacrificed on the altar of this craze. I have seen many of the so-called famous matches. Chance has been the means of my seeing recently many of the Association games, as played in England and so much despised by us Americans. I am convinced our feeling toward the English game is taken from a lack of knowledge of the game—from never having seen the game properly played, or from having witnessed it with a casual indifference born of the *parti pris* for our development of the Rugby game. I make no mention of the game of Rugby football as played in England, except to concede to national pride that a picked team from our universities could probably hold its own with a team selected from the same ranks here, although eager aspirants for international honors should remember that the great games of Rugby football in England are not played by hastily trained undergraduates. But the Rugby game has its chapter of casualties, and is really popular in only a few sections of England, as compared with the Association game.

To sum up, then, some of the points in favor of the Association game, one can say that, while it is the pastime of small boys, it also can be played with a ferocity that would interest the most blasé habitué of the quondam Springfield games. It engages the attention of athletes in every county of England, who can scarcely wait for the cricket season to close to open with the football. It is witnessed by thousands of interested spectators, who accord it every kind of enthusiasm, and that, too, from men who are as fond of the exciting as we are. It is full of opportunities for fine plays, by pass-kicks and head-punts, and it is eminently suited to our kind of temperament, which finds its most picturesque athletic expression in alertness and running. In the hands of American management, it has possibilities beyond what even the English give to the game. But its great point, of course, is its freedom from the brutal element connected with the Rugby game. As the game is strictly football, practically the whole of the play is done with the feet and legs. Consequently, all attention is concentrated upon those parts of the player's body. The moment a foul is made with the hands or by tripping, or anything unfair occurs, it becomes at once visible, and the whole field cries out, and the referee's whistle brings to light the offending party. Too frequent a repetition of unfairness calls for a vigorous protest, and the offending member is removed. And to be debarred from playing in a league game or a cup tie is sufficient denial to make even the most irascible smother his wrath. As so much of the American game consists in being hurled to the ground, and the attendant consequences, we are naturally shy about playing after the frost has set in, and thus only a limited period can be devoted to the play; whereas the season might be prolonged even through the whole winter.

Finally, the Association game is a worthy substitute for what has surely grown to be no longer a fair, healthy competition; and rather than give up football entirely, we might easily adopt it, while we should be spared those gruesome and silly appendages—the doctor and his appliances—which, necessary and desirable in their proper place, are a burlesque connected with a sport, and render us open to the charge of seeking a cheap notoriety at a small cost. Should we really be so keen over our splints and ambulances if we thought serious danger was ahead of us? Edward Brooks.

Studland, Wareham, Eng., December 7, 1897.

CONGRESSMAN.

To the Editor of The Nation:

Sir: Allow me to enter a plea in behalf of the accurate use of the word Congressman. Naturally, the word means 'member of Congress,' and applies with equal propriety to a member of either branch of our National Legislature. The tendency to restrict its application to Representatives is to be regretted. If that meaning becomes fixed upon the word, then we shall have no simple term by which to designate a member of Congress without indicating his rank.

Calvin S. Brown.

December 15, 1897.

[Our correspondent is not the first to point out this encroachment of the lower house upon the upper; but does it not smack of poetic justice that our debased Senate is implicitly ignored by this assumption of the term "Congressman" by the Representatives?—Ed. Nation.]

Notes.

The Macmillan Co.'s latest announcements are 'The Sun's Place in Nature,' by Sir Norman Lockyer; 'Cairo of To-day,' by E. A. Reynolds-Ball; Zola's 'Paris,' the third volume in the "trilogy" composed also of 'Lourdes' and 'Rome'; 'Where the Trade-Wind Blows,' West Indian tales by Mrs. Schuyler Crowninshield; 'Melic Poets,' by Prof. Herbert Weir Smyth, the first volume of his "Greek Lyric Poets"; 'The Science of Law and Law-Making,' by R. Floyd Clarke, of the New York bar; and 'Outlines of Sociology,' by Lester F. Ward, LL.D.

The Sentinel Printing Co., Keene, N. H., has in press 'The Bellows Genealogy,' by Thomas Bellows Peck, from which the biographical sketch of the most eminent bearer of the name, the late Rev. Dr. Henry Whitney Bellows, has been extracted to make a thin pamphlet with portrait (not flattering). This too may be had of the above firm.

Mr. David W. Hoyt, Providence, R. I., now follows up his circulars regarding his proposed genealogical work, 'The Old Families of Salisbury and Amesbury, Mass., with some related families of Newbury, Haverhill, Ipswich, and Hampton,' with a specimen Part I., which will also be the last part unless two hundred subscribers can be found at five dollars for the total five parts. Mr. Hoyt wisely prefaces the family genealogies with early lists of inhabitants of the two principal towns, so that (the scope of the work reaching to the year 1700) would-be subscribers have a good opportunity to judge how much their interest lies in these pedigrees. It is clear that Mr. Hoyt is an expert and careful genealogist, of the best school. On p. 28 he remarks on the numerous errors in Joshua Coffin's 'History of Newbury,' and his consequent resort to the town records for dates of Newbury families included in this book. Nor is this a solitary instance of correction of printed error.

The seventh volume of the *Land of Sunshine* shows a table of contents betraying no falling off in interest and no sign of weariness in the indefatigable editor. The story of the "Disenchanted" Mesa is here retold, with abundant photographs showing the mesa and the ascent of the party which succeeded Prof. Libbey. For the rest we have the familiar text and illustrations regarding the exhaustless wonderland of our Pacific Coast. The first number of the new (eighth) volume is marked by a return to Mr. Lummis's laudable practice of publishing facsimiles of early Spanish-American documents. He now treats of the first American books, notoriously printed in Mexico, and gives us the last page of the 'Manual de

Adultos' (1540), the third American book; the first engraving, from the title-page of the 'Tripartito' (1544); and the first music, from a psaltery of 1584. The whole subject will be thoroughly discussed in Mr. Lummis's 'Awakening of a Nation,' now in the press of Harper & Bros.

A favorable specimen of the better class of subscription-books is 'Germany's Iron Chancellor,' by Bruno Garlepp, translated by Sidney Whitman. The publishers are the Werner Co., Akron, Ohio, whose "Bismarck Department" is at 78 Fifth Ave., New York. This sumptuous folio is profusely illustrated with a great variety of subjects; portraiture of Bismarck, his family and his ancestors, and his coadjutors, predominating. There are also numerous double-page color prints from historic paintings. On this side, the volume is well worthy of attention. The text falls at once under the shadow of so much illustration, and it is not, in fact, biography of a high order. If proportion alone be considered, one-half the volume is occupied with Bismarck since his dismissal—which is excessive for an anti-climax. Whole chapters are given to his 80th birthday, the visits of deputations, congratulatory addresses, and like demonstrations dear to the German heart. Still, when all is said, the man, his pedigree and his domestic environment especially, are well brought out for study and reflection, by the writer and the photographer. Meanwhile the ex-Chancellor is yet among us, to delay putting the capstone on monuments like these.

Our readers are already familiar with M. Léon Lecestre's recent publication of Napoleon's inedited letters. An English version of them, by Lady Mary Loyd, has just been brought out by the Appletons ('New Letters of Napoleon I., omitted from the edition published under the auspices of Napoleon III.'). This is an authorized edition, but it is a little odd that M. Lecestre's name is nowhere mentioned in connection with it. The translation appears to be adequate but not remarkable; and why should letters to Napoleon's mother be headed and (worse still) indexed as to "Madame Mère"?

'Shirley' and 'Rob Roy' fare better than 'Pendennis' and 'Vanity Fair' in the one-volume series of standard novels now for some time in course of production by Service & Paton, London (New York: Putnams). The longer-winded novelist is punished by being put into small type and a condensed page. In all other respects this is a comely edition, and is tastefully bound.

The same moral is applicable to Bulwer's 'Harold,' which introduces the "Library of Historical Novels and Romances" edited by George Laurence Gomme for Archibald Constable & Co. (New York: Longmans). On the other hand, No. 2, Charles Macfarlane's 'The Camp of Refuge,' has a much more open and agreeable typography. The idea of this series—continuity in historical fiction—is very good, and Mr. Gomme, as his introductions show, does not slight his duty as editor. Besides his analyses of the tales and his annotations, he supplies pertinent antiquarian pictorial illustrations, topographical views, maps, etc., in liberal measure.

Mr. T. H. Robinson's numerous illustrations to Sterne's 'Sentimental Journey' (Longmans) are to be praised for decorative taste and restraint; and the letterpress is excellent. What is noteworthy is that this is an exact reprint of the first edition (1758), save the correction of sundry printer's errors. Those to whom Sterne's emotional and suggestive punctuation is a concern will be glad to have the original to turn to.

By way of contrast we must think 'A Book of Old English Love-Songs' (Macmillan) over-illustrated and decorated by George Wharton Edwards. On a larger page this defect might disappear, for the margins would supply the white now so sedulously ostracised by superfluous head and tailpieces. The designs by themselves are not without merit, though not of the highest. A slight introduction is furnished by Hamilton W. Mabie.

The simplest of Mr. Charles Robinson's pen-drawings for 'Lullaby-Land,' Eugene Field's "Songs of Childhood" (Scribners), are the best, *e. g.*, his gingham dog and calico cat, his shuffle-shoon and amber-locks, etc. The whole has a rather spotty look, and is not a good lesson in taste to the infant mind. The songs, too, have an uneven quality—the poet's eye was not always on the children, especially in his pathetic mood; and part of his humor lies in a vocabulary not by any means infantile.

The new Library of Congress does not lend itself internally to broad vistas. Some idea of it, however, is to be got in detail from the series of heliotype views under the above caption, just issued by Dart & Bigelow, Providence. It is not complete, even in the way of examples—for example, Kenyon Cox's decorations are passed over; and there is a little laxity in designating the objects in each plate.

In writing "about a very little corner of a very great place," especially if the place have gentle memories for many people, it is not difficult to arrest their attention by shocking their sensibilities; but no amount of literary skill will make such perverted success aught but worthless. All the fiction ever written about Harvard is inferior to a volume of the *Graduates' Magazine* in suggesting the eternal verities of the place; but if we must have Harvard stories, let them be wholesome and pleasant ones, like Mr. W. K. Post's—not a réchauffée of 'Guerndale,' sauced with brutalities of language in the early manner of Rudyard Kipling, as in Charles Macomb Flandrau's 'Harvard Episodes' (Boston: Copeland & Day). Mr. Flandrau's atmosphere is of one particular club at one particular date; his portraits, though true to nature, are luckily not types; his brilliant cynical conversations are beyond the ken of the average healthy undergraduate—and Harvard College is made up of more than 2,000 such undergraduates, not of the few failures, accidents, and unworthy successes. We sincerely regret that the book is so clever, for its effect, so far as it has any, on outside opinion of Harvard can hardly help being mischievous. Too many people are ready to judge a whole body by what they learn about an excrescence.

The little collection of tales of Barford folk, by W. J. Dawson, 'Thro' Lattice-Windows' (Doubleday & McClure Co.), sombre in spite of liberal sprinklings of humor, may still be counted among the successful attempts to present with fidelity the varied human interests of a remote country village. It certainly reproduces to an unusual degree the curiously mingled charm and unrest induced by continued contact with genuine country life, with "its vital and contented desolation."

With so much good raw material it is a pity that Mr. Henry Seton Merriman should not have offered, as the finished product, a more convincing story than that which he calls 'In Kedar's Tents' (Dodd, Mead & Co.). Entire improbability may easily redeem an otherwise valueless piece of fiction; but a novel in which only the most important incident is improbable, may very well be ruined as a source of pleasure. Would a Carlist conspirator intrust to a wholly unknown Englishman a letter the miscarriage of which would mean death to himself and disaster to his cause, relying only upon the general reputation of all Englishmen for honesty? Or, having risked this, would he, without taking the slightest trouble to establish the fact, stab the Englishman on the suspicion that he had not delivered the letter? It seems unlikely that, even in Spain, such delicately grave responsibilities would be delegated to so unreasoning a human being.

Titian is the latest number in Knackfuss's "Künstler-Monographien" (Leipzig: Velhagen & Klasing; New York: Lemcke & Buechner). There is nearly one illustration for every page of the thin volume of 151 pages, and the number is sufficient to show for purposes of study the artist's range of subject and execution. The editor of the series contributes the text.

The next number of the *American Historical Review* will contain some new matter relating to the convention of 1787, derived from the papers of Major William Peirce, member from Georgia. The manuscript, which has turned up unexpectedly in Connecticut, includes a partial record of the debates, much less ample than Madison's, and a series of sketches of the members. Another piece of Peirce's on the convention, from another source, is subjoined. The same number will give the final portion of the posthumous chapter of the late Prof. Tuttle's History of Prussia.

The Camera Club of this city has just transformed its occasional official *Journal* into a punctual quarterly, *Camera Notes*. It will publish with each number "two photogravures representing some important achievement in pictorial photography," besides half-tone prints. The letterpress will go further afield than formerly and be less restricted to club topics. In short, we have here a new journal of photography. The two numbers at hand show a generous conception carried out with distinction, and prove the annual subscription (one dollar) to be very moderate for the return. Mr. A. Stieglitz contributes a charming "Bit of Venice" and an admirable portrait of the late lamented publisher Mr. A. D. F. Randolph, and Mr. F. H. Day his fine "Ethiopian Chief"; the smaller pieces, too, are carefully chosen. The club's address is No. 111 West Thirty-eighth Street.

The second number of *Mazama*, "a record of mountaineering in the Pacific Northwest," is devoted mainly to a description of Crater Lake in Oregon. It is illustrated by numerous interesting photographs and a map. The society of which this attractive periodical is the organ has for its aim not only the increase of our knowledge of the Northwest, but also "the preservation of the forests and other features of mountain scenery as far as possible in their natural beauty."

It is quite impossible to keep up with Mr. Bernard Quaritch's successive catalogues, whose quality is known to all who meddle with books on either side of the Atlantic, but his No. 175 has a rather permanent

worth in and for itself. It is styled 'Monuments of Printing,' and comprises books produced by the earliest presses in Germany, the Netherlands, Italy, France, Spain, and England from 1455 to 1570. Its three sections are Typography; Xylography (block books and facsimiles); and Bibliography (history of printing). Add the index, which can but be helpful for speedy reference.

Some ten or a dozen block calendars for the approaching year come to us from Marcus Ward & Co., who consult a great variety of tastes with selections from Scripture, Tennyson, Dickens, etc. There is one for Children, another for Ladies, and a third for the American Revolution. The ornamental backing we cannot, on the whole, accord much praise to, as color work or as design. More pleasing in this respect are the knotted sheets designated as "Floral Favorites" and "Violets for Faithfulness" from the same firm.

To the latter class exclusively belong the series published by Frederick A. Stokes Co., ascending from the New Humphrey and Little Sweethearts Calendars (studies of children) to the Longpré (flowers), Lucile (Mme. Lemaire's design for Owen Meredith's poem), A Bevy of Fair Women, and the Sarony (portraits of Ada Rehan, Mary Anderson, Ellen Terry, Fanny Davenport, etc.). Color and photography play here an equal part, with varying attractiveness.

It was,we believe, Louis XV. who could not abide one of the most charming ladies of his court because her teeth were so horribly dilapidated. It was reserved for an American to change all that, and the late Dr. Thomas W. Evans became dentist to the Emperor Napoleon III. and his court, bringing all the appliances which had been invented and developed in this country beyond all foreign competition. This skilful practitioner, who even played a chivalrous part in the flight of the Empress after the catastrophe of 1870, is naturally commemorated by a fellow-Philadelphian, Mr. F. Gutekunst, who sends us one of his well-known imperial photographs of Dr. Evans, in his usual high style of execution.

At the forty-fifth annual meeting of the Wisconsin Historical Society on December 9 it was shown that its books and pamphlets now amount to 192,000—more than half of them bound volumes—with an increase during the last year of 8,695 titles. Progress was reported on the fire-proof library, for which the Legislature two years ago voted $180,000. An appropriation of $420,000 has been since made for so enlarging the Historical building as to afford room under the same roof for the University Library. As next May brings the jubilee of Wisconsin's entrance into statehood, a law was passed by the last Legislature encouraging the formation of local historical societies auxiliary to that of the State. It is likely that not a few will be organized. The fourteenth octavo of the Society's collections is now in press, as is also its catalogue of newspapers, with notes, in 600 pages; the card catalogue of its books and pamphlets is completed.

The 30th of November was the eightieth anniversary of the birthday of Theodor Mommsen, and the great historian, we learn from an article by Dr. Fritz Jonas in the *Rundschau* for December, is still in the midst of unceasing labors, and, despite his fourscore years, has had no time to grow old. The amount of Mommsen's work is vast in itself, but it seems marvellous if one bears in mind that his lifelong scholarly industry has never caused him to neglect the most varied and important political and social duties. On the contrary, his public life, also, has been an exceptionally active one, and he despises those who "take off the citizen's coat for fear of compromising their scholar's dressing-gown." In his earlier years, it is well known, he suffered loss of liberty and position ("for the good of the University") in consequence of his too lively interest in political affairs.

The Ricardo fellowship of $350 will be awarded for the year 1898-'99 to all Harvard candidates for the degree of A.B. in 1898, and to members of the Graduate School and of the Law School, without regard to their pecuniary circumstances. The holder of it will be obliged to pursue the study of the subject ("some phase or phases of the relation of the public to public-service corporations, including the questions of governmental and municipal ownership and management") at Harvard in 1898-'99. Essays of candidates must be handed in not later than September 1, 1898, for award by September 20, addressed to the Department of Economics, in care of the Corresponding Secretary of Harvard University, of whom further particulars can be obtained.

"The Development of the Law, as illustrated by the decisions relating to the police power of the State," is the theme for the essay awaiting the award of the Henry M. Phillips prize by the American Philosophical Society at Philadelphia. Essays must be in the Society's possession before May 1, 1899, and must not exceed 100,000 words, exclusive of notes. The prize is $2,000.

—The Macmillan Company have recently published a Supplement for 1897 (62 pp.) to the 'Handbook of Courses Open to Women' in foreign universities, which was issued last year by the Graduate Club of Bryn Mawr College. The Supplement contains the necessary changes in the list of professors and lecturers, and is, in fact, a useful table of corrigenda and addenda. In all cases, the information given has been obtained at first hand by the editor, Dr. Maddison, from the officials of the universities and colleges concerned. Particulars of the University of Helsingfors, omitted last year, are now included, from which we learn that women who wish to enter the Finnish university in any faculty save that of medicine must obtain special permission from the Chancellor. Curiously enough, no such restriction is imposed in the case of the Medical School. The degree of M.A. was conferred on a woman for the first time, at Helsingfors, in 1882. On April 1, 1897—*absit omen!*—the degree of doctor of medicine was granted to a woman for the first time in Austria, at Vienna. In the field of women's education in England the most important events of the year 1896-'97 have been: the refusal to grant the title of degrees to women who have passed the honors examination of Cambridge University; the arrangement of greater facilities for women to study at Durham University; the opening of a hall of residence for women graduate students at Cambridge; and the foundation of the new Davy-Faraday Research Laboratory in London in connection with the Royal Institution. This laboratory, which has for directors Lord Rayleigh and Prof. Dewar, was endowed and given to the Royal Institution this year by Dr. Ludwig Mond. "It is open, at the discretion of the committee, to all persons, irrespective of sex or nationality, who have done scientific research work, or are judged capable of undertaking it." The permission thus obtained, there is no charge even for materials, chemicals, gas, electricity, etc. With these generous and, we imagine, unique conditions of endowment, we may fitly compare the case of the Zoölogical Station at Naples, where fees to the amount of $400 are paid for the privilege of a table. On page 32 for Adams read Adam; on page 38 for Tomm read Tomn.

—A correspondent, who remembers the publication in the thirties of pension lists, shows that they had other good results besides "spotting" men who were drawing from the Government money to which they had no just claim—indeed, that their publication had another aim. He writes:

"Temple, the pension agent in Rutland, Vt., had lived there for many years in finer style than any other inhabitant. When bills for publishing pension rosters were introduced in Congress, he made haste to Washington, and, joining the lobby who fought against them, perhaps retarded their enactment. After their passage he offered a bribe to a pension clerk, to induce him to omit certain names in the list he was preparing for the press—that is, of men whose pensions had been drawn after their death. Failing in this attempt at concealment, he hurried home—but watched the post-office. After some days he saw a letter there in the box of the United States Marshal which he told the office clerk he would carry to that officer. It was afterwards remembered that he was seen to break open the letter as soon as he had passed out of the door. Its contents were an order to arrest the agent and bring him before a judge who was his next-door neighbor. As Temple walked homeward he halted for a moment to gaze at two boys of his at play in the street. Reaching home he threw the letter into the fire in a stove, took his rifle and told his wife he would see if he could kill a squirrel. Passing by his hired man, who was husking, he exchanged some words, passed round the corner of the granary, and at once shot himself dead. Not only was his own peculation brought to a perpetual end, but the confiscation of his estate largely recouped the Government. Too few of those now following in his steps would commit suicide as he did, but many of them, thanks to a roster, might be made to disgorge, and the moral lesson would be good for encouraging the others."

—Mr. John Russell Young, Librarian of Congress, is reported as saying that the experiment of employing women in the Library of Congress has not been successful. Reports coming from readers there would lead us to agree with him. What better could have been expected from a bevy of novices, knowing nothing whatever of library work? In libraries where assistants are carefully selected, on the ground either of a good library experience or of a library-school education, the experiment of employing women has never failed and never will fail. When female assistants are appointed without regard to fitness, because they have the support of influential Senators or Representatives—and this is exactly the method in which all but the heads of departments have been appointed in the late reorganization of the Library of Congress—the experiment of employing women is sure to fail, not because they are women, but because they are incompetent. Men so appointed would have only this one point of superiority, that more of them probably would have had some business training which could be turned to account. On the other hand, men appointed

in such ways to such positions are not unlikely to be persons who have failed in other attempts to earn their living, whereas the women may never have tried, and more of them may possess ability and adaptability. But the whole system is wrong. Mr. Young's declaration is only another proof of the wisdom of those who wished to have the new corps of the Congressional Library appointed after a civil-service examination. That method may not, perhaps, give the best possible body of assistants, but at least does not, like the appointment by influence, give the worst possible corps.

—In an interesting paper entitled "Le Voile de l'Oblation," read before the French Academy on the 12th of November, M. Salomon Reinach attempted an answer to one of Plutarch's *Quæstiones Romanæ*. "Why is it," asked Plutarch, "that, in the act of worship, the head is veiled?" The veiling of the head to which Plutarch refers was unknown to Greek rites; but, at Rome, from the last centuries of the Republic, it was a universal custom—except, indeed, in the case of three gods, Saturn, Hercules, and Honos. The etiquette of the veil was supposed to date from the injunction of the seer Helenus to Aeneas (Aen. iii., *seqq.*). It was thus, we are told by Virgilian commentators, that, by the prescience of Helenus, Aeneas avoided an awkward rencontre with his Greek foe Diomede at the moment of sacrifice. Here we have the pseudo-historical explanation, and along with it Plutarch's three solutions: The head is veiled (1) in token of humility; (2) to escape hearing words of evil omen during prayer; (3) as a symbol that the soul, though covered and hidden by the body, adores the god from within. This last may at once be rejected as Pythagorean in origin. The second solution is favored by modern writers on antique usages such as Klausen and Marquardt. M. Reinach dismisses all three of Plutarch's answers, and prefers to connect the custom of the veil at prayer with its use in an altogether different rite—that of the *devotio*, or solemn consecration. Perhaps the earliest trace of this is in the account by Festus of the Italic custom of the *ver sacrum*, the "sacred spring." "The Italians," says Festus, "when they were menaced with great dangers, would promise to sacrifice to the gods all living things born in their midst that spring. But as it seemed cruel to kill innocent children, they were allowed to reach maturity, *were then veiled*, and driven from the territory." Obviously Plutarch's explanations would not account for the ceremony of the veil in this form of *devotio*. Nor would they suit the *devotio* of the guilty vestals who were always completely veiled before being buried alive. M. Reinach considers that the "taking the veil" in the modern form of personal consecration is essentially the same rite. When, in 340 B. C., Decius "devoted" himself on behalf of the Roman army, it was with veiled head that he rushed among his Latin foes. During Cicero's exile, Clodius "consecrated" his house as a temple of "Liberty." The essential rite in this *consecratio bonorum* was the veiling of the magistrate's head for the act of consecration.

—The governing idea of all these acts is that of a gift made to a divinity, and it should be noted that, when the gift is not a human being, it is the *giver* who wears the veil. In the veiling of the right hand, which was customary in sacrificing to "Fides," M. Reinach would trace the same idea of consecration, in this explanation again departing from ancient and modern critics. To the question how the notion of consecration is expressed by a veil, why the candidate for initiation at Eleusis or for Christian baptism at Jerusalem, the Roman bride and her Christian counterpart, conform to the same custom, M. Reinach gives the general answer that the act is that of putting aside and isolating from the world the consecrated object. To admit in this connection, even as an accessory idea, the covering of the eyes of a condemned criminal, is, we think, to carry the thesis too far. Nor do we agree with M. Reinach's explanation of the tragic gesture of Pompeius, who, Lucan tells us, when he saw the swords of his murderers,

> "swathed his visage, for he scorned unveiled
> To yield his life to fortune: closed his eyes
> And held his breath within him, lest some word
> Or sob escaped might mar the deathless fame
> His deeds had won."

It is Lucan's unhappy fate that he lies under the suspicion of rhetoric, even in his finest imaginative touches, and here M. Reinach thinks the explanation too rhetorical to be true. But he out-Lucans Lucan when he interprets the natural movement of a defeated man, suddenly confronted with a violent death, as a religious act of self-consecration to Roman liberty and the Senate. When Cæsar, after a violent struggle with his assassins, saw the uplifted dagger of his friend Brutus, he forthwith covered his face with his toga, and so died. Here again, we cannot follow M. Reinach in thinking that Cæsar, when he felt that he was lost, accomplished the act of *devotio*, like Decius. This slight criticism apart, the paper is an interesting and valuable attempt to answer Plutarch's question by the comparative and historical method—that is to say, by a sort of *étymologie des usages*; a style of investigation for which both Greeks and Romans were curiously inadequate.

—We have received two brochures by Signora Jessie White Mario which deserve the attention of students of social questions. The first, 'Il Sistema Penitenziario e il Domicilio Coatto in Italia' (Rome: Forzani), describes the present condition of Italian penal institutions, in which there is an astonishing amount of inhumanity, due partly to ignorance, partly to indifference, and partly to the perpetuation of semi-barbaric methods. Criminals are neither reformed nor made to contribute to their support—the latter being an evil which demagogic legislators still inflict on many of our own States. Signora Mario suggests as a remedy that the great army of criminals should be set to work reclaiming the three million and a half hectares of waste land in Italy and Sicily, and that habitual offenders of the worst sort should be separated from those guilty only of mild misdemeanors and from juvenile criminals. The value of her study is enhanced by the comparisons she makes with penal methods in France, Belgium, England, and the United States. Her second brochure, 'Le Opere Pie e l'Infanticidio Legale' (Rovigo: Minelli), deals with a still more shameful blot on the humanity of the time—the deliberate letting die of a large proportion of the infants admitted to the *crèches* and foundling asylums of Italy, and the wholly inadequate care given to those who survive. Thus, at the institution of the Santissima Annunciata at Naples, 853 out of 856 babes received in one year died. Comment on such figures is unnecessary. It should be said, however, that all Italian orphan asylums are not conducted in this atrocious fashion. Signora Mario reviews them in detail, good and bad, and points out that the adoption of the best system cannot do away with all the abuses now existing unless intelligent and disinterested philanthropic men and women dedicate themselves to the supervision of orphan and foundling establishments. Her description of the way in which the Neapolitan *camorra* levies large tribute on the funds intended for charitable purposes, sounds strangely like what we have read of New York's *camorra*—Tammany. When problems such as these remain unsolved—and each country has its own—how cheap, how uncivilized, are the cries of those persons who urge that only in war and in preparations for war are to be found motives worthy of a great people. Signora Mario pertinently asks the humane women of Italy who organize Red Cross societies to care for the wounded in battles which may never be fought, whether it would not be better to declare war at once against the legalized annual slaughter of myriads of innocents. Both of her studies afford further evidence of the failure of clerical methods to humanize and to make virtuous the race over which for centuries they had almost complete control. Now, as in the past, some of the most abominable of Italy's charitable institutions are those conducted by pious fraternities and sisterhoods.

IRVING'S ASTORIA.

Astoria: or, Anecdotes of an Enterprise beyond the Rocky Mountains. By Washington Irving. Tacoma Edition. G. P. Putnam's Sons. 1897. 2 vols. 8vo, pp. i-xxiv, 1-389, and i-xviii, 1-391; many plates.

This classic work has been before the public since 1836, and gone through uncounted editions, in one, two, and three volumes. It has been held by the present publishers since 1861 or earlier, and the latest edition is a sumptuous one, with a duodecimo typebed on a large octavo page, whose generous margin is partly occupied by an elaborate colored border; numerous full-page plates of greater or less pertinence to the text further embellish this fine piece of book-making. Whatever criticism Irving may have encountered from his contemporaries for this performance has long since been forgotten; the fame of 'Astoria' is perennial, and the witchery of Irving's matchless pen is invincible. No one could now say anything of 'Astoria' which would help or hurt it one iota in public estimation; we should as soon think of attempting to alter the place in literature of 'Robinson Crusoe,' or White's 'Selborne,' or Walton's 'Angler.' No one can be proof against the charm of 'Astoria'; we sat down to pen a brief notice of the handsome "Tacoma" dress Irving has just received, but forgot our business till we had read both volumes through, perhaps for the twentieth time. What we finally made up our mind to say seemed so ungracious, if not also so futile, that we wished to desist. But there are some things that need to be said about this book, since some new light has been shed on the whole subject of

Astoria by the appearance of the Journals of Alexander Henry, jr. Part III. of that work is devoted to this topic, and raises some questions which would not now be asked if Irving had had access to the Henry manuscripts, notably with regard to affairs at Astoria about the time it was captured by the British, and thereafter, when it was held by them as Fort George. The ill-known route of the Astorians across the continent and back again has come up for determination in the light of recent researches. Furthermore, all the editions of 'Astoria' we have seen have been careful literal reprints —Irving's masterpiece has never been textually tampered with.

We are far from proposing a reëxamination of 'Astoria' either as literature, or in those general commercial and political bearings it had when it was new; nor do we discuss Astor's policy, which writers like Alexander Ross have viewed differently from Irving. Regarded as history, apart from all charm of the telling, 'Astoria' has from the start included a number of errors of fact, chiefly in dates, which no one has hitherto been at the thankless pains to point out. From the standpoint of the geographer, 'Astoria' has never told us where the overland Astorians went. Something might also be said of Irving as of a genius who appropriated his own and transfigured it to his own purposes wherever he found it, as any reader of Brackenridge, Bradbury, Franchère, and Cox would discover. Waiving this latter point, and proposing no essay on 'Astoria' in its broad bearings, we make this luxurious edition of a classic work the occasion to point out some blemishes, individually insignificant, collectively worth noting, which can easily be done away with in future, and then address ourselves to the attempt to trace the transcontinental routes in terms of modern geography.

Chaps. v.-ix., pp. 60-126, on the voyage of the *Tonquin* and founding of Astoria, are more exclusively based on Franchère than Irving's slight recognition of this Astorian actor and writer would suggest. A nearly complete roster of the persons on board occupies Franchère's French original, p. 16, English translation, p. 29. Irving's thrilling story of the massacre tells more than anybody but the dead ever knew, but it can all be as easily imagined as is the new picture which embellishes this edition. The best check on Irving's pen is Ross Cox (p. 63 *seq.*). It is highly improbable that Clerk Lewis was the one who blew up the ship.

Many misdates need to be corrected, some loose ones to be fixed, and some missing ones supplied. P. 36, it is said that Lewis and Clarke (*sic*) accomplished their enterprise in 1804; but they started that year, reached the Pacific in 1805, and returned in 1806. P. 128, the reconnoitring party consisted of Alexander McKay, Robert Stuart, Ovide de Montigny, and Gabriel Franchère; they were gone May 2-14, and Irving's "not long after" means June 15 for the appearance of his "two wandering Indians." This episode is one of the most vitally important of all in the history of Astoria, bearing hard upon subsequent international controversies; for the "Oregon question" might have had another issue if David Thompson had not arrived just in time to be too late. Irving is substantially correct in all he says; but this can now be confirmed in Thompson's own words, from the opposing point of view (see extracts from his journal, in Henry, p. 748, etc.). P. 145, "early in August"; but Franchère says towards the end of July, and reports confirmed "some days after" by Indians from Gray's Harbor. P. 168, "the year gradually wore away"; various incidents are detailed by Franchère for November and December, 1811. P. 185, the missing names of the Missouri Fur Co. are given from contemporary records in the 1893 edition of Lewis and Clark, p. lxxix. Wm. Clark was one of them, and so was the "Mr. Henry" repeatedly mentioned, but never identified by full name. He is the *Andrew* Henry of Henry's fort and Henry's fork of Snake River, who died June 10, 1833, and has been ever since more or less mixed up with Alexander Henry, jr., with resulting doubly apocryphal biographical notices (for the facts, see Henry's Journal, pp. 752, 787, 843, 867, 885).

As to the special itinerary of the outgoing overland Astorians, whom Irving has safe in winter camp of 1810-'11 at the mouth of the Nadowa, he says on p. 193 that Hunt left them for St. Louis "on the 1st of January (1810)"! This sheer slip of the pen or misprint runs through all the editions of 'Astoria' we have seen; truly it is self-corrective, yet it has kept the overlanders hanging ever since between 1810-'11 and 1811-'12 in compiled accounts by careless writers. Hunt is next said to have reached St. Louis January 20—no year named, but 1810 again by previous error; read 1811, of course. Next comes an aggravating blunder, not only not self-corrective, but impossible to rectify on the face of the record. The party having started, at a date unsaid, reach St. Charles "the same afternoon." They started on Monday, March 11, 1811, but we next read, "on the afternoon of the third day, January 17th." Counting the starting day, the date is Wednesday, March 13, 1811 —not January 17, 1810, as Irving says for the day and month, and implies for the year by previous error. This right date is supplied by the contemporaneous evidence of the *Louisiana Gazette* of Thursday, March 14, 1811, which says that Hunt left with Bradbury and Nuttall on Monday, March 11. After this bad break Irving's chronology runs right, the next date being March 21, and so on, to p. 274, where, by a slip, "July" 3 appears for June 3, and p. 277, where "July" 5 stands for June 5. Thereafter we believe dates are correct through this volume.

Vol. ii., p. 35, for "Oct." 9 read Nov. 9 (1811). P. 92, for "nearly a month previously" read Jan. 18, 1812 (so Franchère). P. 120, Irving says "Mar. 22" for the date which Franchère, who was on the spot at the time, gives as Mar. 30. P. 144, "June 29" is in question; some say 30; Franchère is out of court, for he gives June 31! On p. 158, the misprint of August 20 in all former editions is now corrected to Aug. 10—the sole correction we have found. P. 269, for the loose date of sailing of the *Beaver*, read Aug. 4, 1812. P. 271, Jan. 16 is either this day or the 15th (see Henry's Journal, p. 761). P. 274, "in the meantime" means Mar. 31, 1813. P. 301 and p. 315, for Aug. 20 read Aug. 4, 1813 —so Franchère. Pp. 322, 323, occur four dates in some month Irving forgot to name; supply Aug. 14, 17, 25, and 28, 1813, from the Henry Journal, p. 845. P. 327, Oct. 2 is correct—misprinted September in Franchère. On p. 341, the most important date in the history of Astoria is wrong one day—that of formal possession of the place by the British and change of its name to Fort George. Franchère, who was present and made a speech, gives Dec. 12, 1813, which Irving and all others have accepted. But it appears from Henry, who was there too, and describes the incident at full length in his Journal, pp. 769, 770, that Capt. Black entered the fort at 11 P. M. on the 12th; that they all made a wet night of it, and finished the performance next day, Monday, Dec. 13. P. 345, Apr. 3 as date of sailing of the *Pedler* is given as Apr. 2 by Henry, who saw her off, but Irving's "next day," Apr. 4, 1814, is correct; see Henry's Journal, pp. 865-876, for a very full and entirely new account of the evacuation of Fort George by the Nor'westers and ex-Astorians, with roster of the names, bills of lading of the canoes, etc. This list, taken with another which Henry gives of the occupants of Fort George who did not go away, amounts to nearly a complete muster by name of the persons connected with the establishment in 1813-14.

The strength and composition of the overland Astorians will never be known exactly. In numbers, Irving says, p. 219, "nearly 60 persons." Some ciphering we have done with Capt. H. M. Chittenden, upon internal evidence of the book and other data, gives 64 persons, with probable error of one or two. The arithmetic is too long to print here; the x of the equation may possibly be Pierre Dorion's squaw, who was *en route* (in another sense) at the start, and had her baby by the way. Probably less than half of the party will ever be known by name. Of the 60-odd who started, it appears that only 47 reached Astoria, all in sad plight after horrible hardships and several fatal casualties. We could correct a number of misgiven names, like "Andri Vallar" for André Vallée; but it is hardly worth while to go into such detail. The most obscure name is that of one "Sardpie"; he is Baptiste Gardepied (or Gariépy, as we believe it is now written). "Mr. Breckenridge" is of course Henry M. Brackenridge, the author.

The route of the overlanders is the crux of Irving's work, demanding special attention, which it has never yet received. We must remember that this was the second transcontinental journey ever made through the United States, and that Irving could not tell us where his people went, for the same reason that Biddle could not trail Lewis and Clark exactly—he never knew. He simply spirited them over the plains and the mountains from the Missouri to the Snake River; there is only an air of geography in his narrative, mostly in the clouds. Dr. Coues lately handled the subject in his Henry book, and set up some sign-posts, but was far from recovering the whole route in detail. We have gone over it again, comparing notes as before with Capt. Chittenden, and now have several exact points to make. Irving makes a false start from the Missouri, throwing the route a full degree of latitude too far north to begin with. He locates the Arikara village (the point of departure) "between 46° and 47°"; but it was short of 46°—say 45° 45′. In 1804 Lewis and Clark found three Arikara villages, within four miles of each other, only four to seven miles above the mouth of their Wetarhoo (present Grand) River. In 1811, according to Bradbury and Brackenridge (who were on the spot with the Astorians, and from whom Irving takes his incidents bodily), these three villages had coalesced in two contiguous ones. The site of

these was some six or eight river-miles above the mouth of the Grand, on the right bank of the Missouri, in present Boreman Co., S. Dak., near but somewhat below the town of Campbell, Campbell Co. *Here* is where the Astorians started, holding a general southwest course over the trackless plains. They crossed "some of the tributary streams of the Missouri"—*i. e.*, two; 1st, Grand River; 2d, Moreau or Owl River—and then came to Irving's "Big" River. Now anybody would think, from Irving's start a degree of latitude too far north, that this "Big" River was the Grand, and thus lose the Astorians on the plains. It was not Grand River; it was the main or Big Cheyenne River that they struck, at an unknown point, probably near the confluence of its north and south forks, which so definitely embrace the cluster of elevations now known as the Black Hills. Exactly where they went through these has never been made out, and probably never will be. Irving's indicia fail, partly because *his* "Black Hills" included everything hilly east of the Rocky Mountains. True, he speaks of "skirting" to the southwest, keeping certain elevations to the right; but this avails us nothing, especially as he presently fetches out on the "Little Missouri." We believe this to be a mistake for the Belle Fourche (the upper reach of the north fork of the Cheyenne), which flows so nearly parallel with the Little Missouri, before it turns, that the two could easily have been confounded. If we send the Astorians through the present Black Hills somewhere in the vicinity of Spearfish and Sundance, and then get them right over the Belle Fourche south of the heads of the Little Missouri, the way begins to grow clear. We soon have them on Powder River, Irving's next definite indication. Where they struck it is uncertain—probably not far from its main forks. The Bighorn range is now squarely across the trail; it is crossed at some uncertain point, well towards its southern end, and Irving is next on a river "running north." This is obviously the north fork of Bighorn River. Skirting the next range to the southwest, the Astorians reach the Bighorn itself, probably a little below the junction of Popo-agie Creek with Wind River—for Wind River becomes the Bighorn after this junction. Now we know where they are going—right up Wind River to its forks, through the present Wind River or Shoshone Indian Reservation. At the forks they leave this river to the right and cross the Continental Divide at or near the present Union Pass; directly they are on the head of "Spanish" (present Green) River; down this they go a piece, and over the Grosventre range to the head of Hoback's River (named for one of them and still so called). Down Hoback's River they go to its confluence with "Mad" River—main or south fork of the Snake. Here, on September 26, 1811, we can stick a pin in the map, and set camp within gunshot of absolute accuracy, for the first time since we left the Arikaras on the Missouri! The rest is clear—over the Teton range by Teton Pass, northwest through Pierre's Hole, and west to Henry's fort on Henry's fork of the Snake. This post has been lately fixed nearly opposite the present Elgin, two or three miles from the present Wilford—say ten miles below the mouth of Fall River. For the rest, the Astorians who were not drowned or left in the mountains of Idaho to trap, straggled down along Snake River in several detached parties, and got to the Columbia in various ways, finally reaching Astoria some months apart. It is a thrilling story of suffering, but Irving is fully equal to that, and we drop the painful subject.

The incoming Astorians of next year, 1812-13, took a route for the most part different from that of the outgoers, and in some respects more interesting as well as more definite. The party of seven which left Astoria June 29 or 30, 1812, soon lost John Day, who went crazy and was sent back. It consisted then of six persons—R. Stuart, R. Crooks, R. McClellan, André Vallée, François Le Clerc, and Benjamin Jones. They went up the Columbia and over the Blue Mountains to the Snake, and up this river to some point near American Falls, where the railroad now crosses. They fell in with J. Hoback, J. Miller, J. Rezner, and E. Robinson, who had stayed in the mountains to trap, making now ten in all. Three of these were left again; the party was then seven—the original six, plus Miller. Leaving the Snake below American Falls, perhaps somewhere about Neely, they struck east across the present Fort Hall Indian Reservation to the bight of Bear River (tributary to the Great Salt Lake), and ascended it to the vicinity of the Sublette range, where they turned north from it, up one of its tributaries. This was either Thomas fork or Smith fork; both run south, and either would bring them north to a head of Salt River, which they followed north to its junction with the main or south fork of the Snake River. They went down the latter to a point short of its junction with Henry's fork, and struck across country to find themselves once more at Henry's fort. Thence they retraced the outgoing trail through Pierre's Hole, over the Teton range, up Hoback's River, and over the Grosventre range to Green River again.

This part of the route is recoverable from Irving only with the utmost difficulty; we have no room to present the evidence, but there is no question of the substantial accuracy of the result. (See Henry's Journal, p. 884.) It is hence that the entirely new route continues to the Missouri. Dr. Coues says (*l. c.*) that they "certainly fetched out on the Sweetwater, and so on down to the North Platte"; this is correct, but he sends them over the Continental Divide via the subsequently famous South Pass at the head of the Sweetwater, thus making them its discoverers. Attentive reconsideration of this point induces us to fetch them from Green River about south-southeast to very near South Pass—perhaps within twelve or fifteen miles of it, when they wandered off the Indian trail which would have taken them through this pass, and kept about southeast till they had headed the Sweetwater entirely. Then they struck east, south of that river, and finally fell on it lower down—perhaps via Whiskey Gap, between the Green and the Seminole Mountains. The rest of the way is clear—down the Sweetwater to the North Platte, down this to the Platte, down this to the Missouri, down this to St. Louis. The only question is the location of their long winter camps. The principal one of the two appears to have been on the North Platte about the mouth of Caspar Creek; the other was lower down, toward Fort Fetterman. In determining such points, and generally in reckoning with Astorian travel, it appears from careful calculation that Irving's distances require about one-third off—say an average of sixty-five miles on the ground to every 100 in the book. The seven persons named reached St. Louis April 30, 1813. Their arrival is noticed in the *Missouri Gazette* of Saturday, May 8, and more fully in the same paper of May 15 (vol. v, No. 247). The latter article is the one which forms Appendix 8 of Brackenridge's book, 1814, pp. 297-302.

If any MS. record which Irving used be extant and available, this should be taken to construct a skeleton "key" to 'Astoria'—not that any one should have the presumption or the hardihood to touch Irving's inimitable story, but that the bedrock upon which that work of consummate literary art was erected should be laid bare, and the secrets concealed with such craft of the pen be revealed to matter-of-fact geographers and historians. What Irving needs is not an editor so much as an interpreter. Our remarks do not fully disclose him, but they open the way to that end.

BRYCE'S SOUTH AFRICA.

Impressions of South Africa. By James Bryce. The Century Co. 1897.

We need spend no time in assuring our readers that Mr. Bryce possesses rare qualifications for the treatment of such a subject as that to which he has here devoted himself. The 'American Commonwealth' proved him a master of the art of scientific description as applied to that complex entity which we call a "country." He knows how to estimate the influence of the past upon the future, the interaction of the material and the spiritual, the relative effects of race, institutions, and traditions, and to combine and blend his judgments so as to produce a symmetrical whole. In special lines of investigation and description there are always preëminent experts. We should not expect Mr. Bryce to offer us a treatise on the geology of South Africa or its fauna, but we do expect that his "impressions" will indicate his acquaintance with such particulars, and we are not disappointed.

Take, for example, his explanation of the failure of the Portuguese to occupy the land which they were the first to discover. He provides us with three maps of South Africa, and shows by reference to them that the interior of the Continent could have been in the first place penetrated only from its southern end. The orographical map reveals a range of mountains on the eastern edge of the continent, with a narrow alluvial fringe containing one or two good harbors. On the west coast there is not a harbor for a thousand miles. It was therefore natural for the Portuguese traders to begin their settlements on the comparatively accessible eastern, rather than on the uninhabited and forbidding western, coast. On the eastern coast, moreover, a trade in gold and ivory had been already developed by Arabian merchants, whom the Portuguese dispossessed, while the southern extremity of the continent offered no commercial inducements. But the alluvial strip on which the Portuguese settlements were placed was so unhealthy as to be a practically insurmountable barrier against expeditions to the interior; so that even if the Portuguese had possessed the colonizing instinct, they could not have exercised it.

The Dutch, however, occupied the Cape peninsula as a place of call for water and

fresh vegetables. The crews of their East Indian merchantmen suffered badly from scurvy on their long voyages, and thus, Mr. Bryce says, "it is from the small beginnings of a kitchen-garden that Dutch and British dominion in South Africa has grown up." For when agriculture was once established, it flourished; and in the dry but salubrious table-land that constitutes the interior of South Africa, pasturage was unlimited. Through the eastern part of this table-land the rainfall, although scanty, is sufficient for grazing, the air is invigorating, and neither fever nor pulmonary disease prevails. As in the case of the New England settlement, the way for the whites had been prepared by the destruction of the natives by pestilence. Impelled in the first place by the natural expansiveness of a vigorous stock, the Dutch were after a time pushed on from behind by the advent of the English, who, in these latter years, have overtaken them, and, as it were, leaped over their heads to occupy regions still farther north. Thus a wave of Teutonic settlement has swept up through the interior, until it has fairly paralleled the coast settlements of the Portuguese, and in some cases flowed down upon them from the highlands.

Such, in brief, has been the course of the European occupation of South Africa; what it has been in detail should be read in Mr. Bryce's admirable narrative. It is gratifying to find that his dispassionate review of the facts leads him to the conclusion that few conquests have been marked by so little wanton cruelty and injustice. Many of the natives have been slaughtered in battle, many enslaved; but neither the slaughter nor the slavery compares in extent or atrocity with that inflicted by the natives on one another. A modified form of slavery, in the guise of compulsory labor for wages, has existed under the rule of the South Africa Company; but it cannot long maintain itself against British public opinion, and in general it may be said that the social status under British rule resembles that which prevails in our Southern States. The climate does not forbid manual labor to the whites; but, having depended on slaves in the first place, they have learned to think that all heavy work should be done by natives. The inferior races, the Bushmen and Hottentots, long since practically died out; the superior Kafirs, or Bantu, under civilized rule, are increasing at a rate which excites apprehension concerning the future. But the problem can never be so grave as it is in India, for in South Africa the whites multiply and do not lose their vigor. It is satisfactory to learn that the curse of alcoholic abuse is comparatively restricted, and that the efforts of Christian missionaries have produced very substantial results.

The name South Africa naturally suggests the recent attempt at revolution in the Transvaal, and although Mr. Bryce came away before the outbreak took place, it was near enough to cast its shadow before it. The particulars of the affair have been so abundantly discussed by the newspapers as to make it unnecessary to review Mr. Bryce's account of them, nor does he attempt to narrate the later details. But he examines with great care the causes that were operating to produce such a result and that continue to operate. His observations are of the same judicial character here as elsewhere, and we detect no trace of national partiality. He is plainly convinced that a continually increasing majority of English-speaking people will not permanently continue to be submissive to the rule of the Dutch minority, if it is to be as onerous as at present, and he especially deplores Dr. Jameson's raid because it tended to postpone inevitable reforms. His forecasts of the future of the Transvaal and of South Africa will be read with the interest that attaches to any forecasts made by so experienced an observer; but it must be confessed that they are not intrinsically of a nature to arouse our enthusiasm.

For, after all, the subject is a small one for Mr. Bryce's powers. He furnishes us with many beautiful descriptions of African scenery, and gives the climate abundant praise. He speaks appreciatively and pleasantly of the various peoples and of their moderate advances in civilization. But the country is comparatively uninteresting, and the dry, clear air, as he says, obliterates all foregrounds. In spite of his efforts to enlist our sympathies—and it would not be easy to do better—we feel that we can get along very comfortably without ever visiting South Africa. Its history has had episodes of dramatic interest; events of great importance (for the South Africans) have taken place within its limits. But they have not been events of such a nature as to affect materially the course of civilization in other parts of the world, and Mr. Bryce half confesses that there is little prospect, except on the general principles of progress, that such events will take place. How many generations, we feel inclined to ask, will have passed away before South Africa can produce any one so competent as Mr. Bryce to write about her?

We must not give the impression that his book is not readable from beginning to end. It is a capital book of travels, an excellent epitome of history, and an admirable political essay. The interest of the reader will not flag from the first page to the last; but he will rise satisfied. He will feel that he has a sufficiently complete acquaintance with the subject; that he understands the features of the country and the character of its inhabitants; that he knows their past and can imagine their future. To be able to enjoy this comfortable feeling of having increased our knowledge without painful exertion is certainly something to be grateful for, and Mr. Bryce will be heartily thanked by the rest of the world as well as by the South Africans for telling their story so well.

LEE, JOHNSTON, AND DAVIS.

Robert E. Lee and the Southern Confederacy, 1807-1870. By Henry Alexander White, D.D., Professor of History in the Washington and Lee University. [Heroes of the Nations Series.] G. P. Putnam's Sons. 12mo, pp. xiii, 467, with portraits and maps.

Prof. White's Life of Gen. Lee has been prepared under circumstances which give it some superiority over previously written biographies of the Confederate leader. The author's relations to Gen. Custis Lee, the President of the same university, who allowed the use of his father's letters and papers, gave the opportunity to quote family letters more fully than others have done, and a most valuable source of knowledge has thus been made available. Prof. White tells us also, in the preface, of the range of authorities which he has consulted, and of the assistance he has had from competent persons, and the work bears evidence in itself that industrious and systematic use has been made of the material at his disposal.

To these literary opportunities, however, there are some offsets. Earlier biographies have been written by military men of high rank who were in close personal and official relations to Lee, and who had the advantage of their own knowledge and experience in interpreting a situation when the written evidence is not conclusive. It can hardly be said that the present book will supersede the others, though it will add to them much that is useful and welcome.

Dr. White is especially to be praised for the labor he has expended in verifying the positions of the subordinate parts of Lee's army from hour to hour in the progress of a battle. Such investigation is most useful in fixing a solid basis for judging the progress of events, and no one who has not tried it can appreciate the amount of toil required to bring it to any conclusive result. He has made free use of the work of those who have gone before him in special studies of critical situations, such as that of Mr. Royall upon Gettysburg; and though his method has not included a full current reference to the opinions of others on debated points, the book would be still more helpful if more of this had been done.

A severe taste would have curbed some rhetorical flights and held to a simple style, in keeping with the quiet dignity of Lee himself. In a number of places the word "park" is applied to batteries of artillery in action, though it is confined as a military term to the compact assemblage of guns or wagons at rest and out of immediate use. The word "band" also seems to be a favorite one, occurring in unusual connections, as when it is said of Meade's army at Mine Run that "this host in five bands was expected to seize the Orange turnpike," or of the Confederate armies in Georgia and Virginia that "both these bands were facing northward."

The author's studies do not seem to have reached the official statistical returns of the Confederate armies, and he follows the habit of Southern writers in preferring the loose expressions of combatants who claim that they always fought one against two or three. Occasionally this involves a puzzling problem, as when the 35,000 with which Lee is said to have fought the battle of Antietam (p. 223) become 72,000 when he had retreated across the Potomac (p. 238).

One interesting question, though not at first blush a very important one, is that of the steps in Lee's service by which he passed from the command of the Virginia forces in April, 1861, to the position of General in the Confederate army. None of his biographers has given a satisfactory explanation of this part of his career, and Dr. White's is evidently erroneous. He says (p. 104) that "May 25 marked the change in his military rank from the position of Major-General in the State militia to that of Brigadier-General in the army of the Southern Confederacy. The Confederate Government had not yet created a military rank in the field service higher than the grade of brigade commander; it was Lee's indifference to the mere insignia of office that prevented friction in the matter of lowering his rank." Again (p. 108) he says: "Nominally as military adviser of President Davis, Lee remained in official connection with the Confede-

rate cabinet. . . . Lee's usual term for Davis was 'the Commanding General.'"

Neither Mr. Lincoln nor Mr. Davis was ever spoken of by military men as "General." The usage in both armies and both governments was identical. The President as Commander-in-Chief always spoke and was spoken of as President. General was a strictly military office subordinate to the President, and a veteran officer of the army like Lee would be the last man to violate law and usage in such a way. The only military title applied sometimes to Davis was that of Colonel, continued by courtesy after the Mexican war, in which he had commanded a Mississippi regiment.

An analysis of the Official Records removes the obscurity which has clung about Lee's promotion, and it may be worth while to clear up the matter. The question of rank was the cause of chafing between Gen. J. E. Johnston and Davis; and Johnston, in his 'Narrative,' gives the dates of the Confederate laws on the subject. Five brigadiers as officers of highest rank in the regular army of the Confederate States were authorized by the act of March 14, 1861, which also provided for their relative seniority according to the rank they had held in the United States army. It allowed six months for officers in the national service to resign, so that the question of relative grade might remain open till September 14. The act creating the rank of General was that of May 16, and gave that rank to the five general officers who had been authorized by existing laws. Davis did not, in fact, complete his five appointments of brigadiers till late in the summer, when A. S. Johnston (for whom he had reserved one) reached the East by his overland journey from California. Among them were J. E. Johnston, Cooper, and Lee, who had been appointed before the Confederate Government was transferred from Montgomery to Richmond in the latter part of May and beginning of June. They had ranked in the national service in the order above stated. Beauregard was a Brigadier in the Provisional (not regular) army, and was promoted to General after the battle of Bull Run.

On the 23d of April, Lee had been made Major-General and commander of the Virginia forces; that State, in the interval between secession and admission to the Confederacy, assuming to be an independent republic. At the same time J. E. Johnston was made a Major-General of Virginia troops under Lee (O. R., ii., 775, 783).

On the 10th of May, Virginia having been admitted to the Confederacy, and troops from other States pouring in, the Confederate Government telegraphed to Major-General Lee, "To prevent confusion, you will assume the control of the forces of the Confederate States in Virginia, and assign them to such duties as you may indicate, until further orders, for which this will be your authority." This was embodied in General Orders No. 13 from "Headquarters Virginia Forces," which directed all officers and organizations of the Confederate army to make reports to him. The order was signed, "By command of Major-General Lee, R. S. Garnett, Adjutant-General" (O. R. ii., 827). It was the familiar case of an officer of militia serving in a higher rank than that which he held in the regular army: Rosecrans, Sherman, Meade, and others served in a similar way on the national side.

On the 15th of May, J. E. Johnston was notified of his appointment as Brigadier-General in the Confederate States army and assigned to command at Harper's Ferry (*id.*, p. 844). The organization of Virginia troops was changed so as to drop the rank of Major-General except for Lee as commanding in chief, and Johnston was offered a State commission as Brigadier. Between the two he chose the Confederate States commission in the regular army ('Narrative,' p. 13). Lee continued to sign his name as "Major-General commanding" until May 25, when he changed his style to "General, commanding," which he permanently retained thereafter. His headquarters, however, he continued to designate as Headquarters Virginia Forces until June 8. On the last-named date he published, in General Order No. 25, Governor Letcher's proclamation that Virginia was admitted as a State into the Confederacy, and that her military forces were transferred to the command of the President of the Confederate States (O. R. ii., 911). From that time Lee's orders and communications were dated from "Headquarters of the Forces," or simply "Headquarters."

On July 20, J. E. Johnston having inquired as to his and Beauregard's relative rank in view of the expected junction of their forces at Bull Run, Mr. Davis telegraphed him: "You are a General in the Confederate Army, possessed of the power attaching to that rank" (*id.*, p. 985). It seems clear that Mr. Davis and his cabinet accepted the conclusion that the law of May 16 conferred of its own force the rank of General on those who had been made Brigadiers under that of March 14, and that the President did not give them any new appointment. Johnston had expected some formal notification, but got none. He was told on July 20, not that he was appointed, but that he was already a full General. Lee had got the same information as early as May 25, and quietly assumed the rank in his communications and orders from that date.

It is also plain that Lee's authority to command in Virginia was recognized after June 8 as it was before, and his series of General Orders runs on consecutively. It must be assumed, therefore, that Mr. Davis regarded the former order putting the Confederate forces in Virginia under Lee as still in vigor, the transfer of the Virginia troops and Lee's accession to the highest grade in the Confederate army having strengthened instead of weakening its applicability. His personal command continued "until further orders," and no further orders had been issued. Lee had never been assigned to duty in his grade of Confederate Brigadier, but served as Virginia Major-General till he passed at once to the rank of full Confederate General. But on the 29th of July, General J. E. Johnston challenged Lee's seniority. He said to the Adjutant-General that he was receiving daily orders coming from "Headquarters of the Forces," which "I cannot regard, because they are illegal" (O. R. ii., 1007). He referred to his letter of the 24th, in which he seems to have taken the ground that the act of May 16, in giving the new rank of General to those who had been Brigadiers, left the relative seniority of the Generals the same as that which they had as Brigadiers; that Lee was therefore his junior and could not give him orders. Precedent and the army regulations seem to sustain Johnston.

The battle of Bull Run had already caused irritation between Mr. Davis and the three senior officers on that field, and the Confederate President was not disposed to yield to Johnston's claim. He sent nominations of the Generals to the Senate for confirmation, affixing arbitrary dates to them, so that Johnston was made fourth instead of first; and when these nominations were confirmed, the disappointed General found no practicable way to contest the matter further. He protested vigorously, and a lasting enmity between him and Davis resulted. Lee took no part in this quarrel, and avoided the appearance of giving orders to Johnston thereafter. His going in person to command in West Virginia was probably, in part at least, to avoid complications until the Senate should act. That he went on his own motion, and that Mr. Davis desired him to return and resume actual authority under the existing orders which had not been revoked, sufficiently appears from their correspondence (O. R. v., pp. 767, 828). As soon as his fall campaign against Rosecrans was over, Lee was assigned (November 5) to command a department of the Southern coasts. Early in the following spring (March 2) Davis urgently requested him to return to Richmond (*id.*, vi., 309, 312, 400). The confirmation by the Senate of appointments expressly ranking by particular dates was held to settle the question of relative seniority. The whole chain of events indicates Lee's determination to avoid mixing in the controversy between Davis and Johnston, and his unwillingness to become a party to any strife over his own rank.

The episode is an interesting one in itself as throwing a very instructive light upon all three of the prominent characters involved. Its consequences were visible through the whole war, and the antagonism between Davis and Johnston brought increasing mischief to the Confederate cause. An incidental result was Johnston's dismissal from command in Georgia in 1864. Another was the later act of the Confederate Congress making Lee General-in-Chief, when he again called Johnston to active duty in the closing campaign of the great struggle.

An Epistle to Posterity: Being Rambling Recollections of Many Years of My Life. By M. E. W. Sherwood. Harper & Bros. 1897.

Mrs. Sherwood is entitled to have her letter read by posterity, if for no other reason, because of her great acquaintance. She literally has known everybody who has had any social existence in New York, and has enjoyed a very considerable international acquaintance besides. From Daniel Webster and Van Buren to the latest arrival from England, all notabilities have passed under her eye, and the result is, that the reader can find in her pages something or other about any noted character of whom he has heard. A great deal of the pleasure given by every such book of reminiscences consists in the fact that through it we obtain a glimpse of great people to whom we cannot by any possibility be introduced in the flesh. The earlier chapters of the book are the best, and bring back the education and adventures of a well-brought-up American girl sixty years since quite vividly. Contemporaries have frequently tried to give posterity an impression of the extraordinary effect produced by Webster's brow and eyes—Carlyle, if we remember right, among the number. Mrs. Sherwood tells a

story of a kitchen-maid whom Mrs. Webster could not reduce to submission. Webster said, "Send her to me." When she came in he simply looked at her, upon which she cried out: "Don't do that; don't do that. I will scrub the buttery."

As the account goes on, it becomes a little journalistic, suggesting a devotion on the part of the author to the gossip which pays; but why not? The author is not a critic, but a looker-on; and if she be professionally social, she always avoids the rôle of intruder or scandal-monger. Indeed, her tendency is to make out society better than it is, and she declares that "it has been a perpetual pleasure to me to see luxury march on with giant tread"—a much more wholesome frame of mind than that of Cynicus, who, after getting as much of the luxury as he can, denounces the age as wanting in simplicity, and scores fashion for not being frugal and wise. Mrs. Sherwood's last chapter shows that she knows exactly what fashion is. What it tends to be, she does not trouble herself much about. She says very frankly that it is a business, carried on for certain well-defined objects. It evidently differs from the business of manufacturing pig-iron or gas in the fact that it is not carried on to make money, but to spend it. In a city in which it is entirely divorced from serious pursuits, and is not the fashion of a court, or nobility, or governing class, it must, of course, have peculiarities of its own. Mrs. Sherwood very justly says that there is no royal road to fashionable life; that many are called, but fewer chosen; and that the tyranny of fashion is an inscrutable mystery—an observation which shows that she is much shrewder than any mere man like the late Ward McAllister, who undertook to explain it all, and merely succeeded in giving the erroneous impression that the whole affair was a sort of "continuous performance" carried on at so much a head, under his own supervision.

The Gun and its Development. By W. W. Greener. Charles Scribner's Sons.

Although the first edition of this book was issued in 1881, the present, which is the sixth, makes it practically a new work. Since 1881 so numerous and rapid have become the changes and improvements in firearms that the type of one year is superseded by that of the one that follows. In order, therefore, to keep in touch with the evolution of gunnery, a book treating of the art is necessarily subject to frequent revision. Mr. Greener is thoroughly alive to this fact, and in the latest edition of 'The Gun,' which is brought up to October 1, 1896, he tells of all that has been accomplished towards the perfection of small arms to that date. That the lapse of a single year necessitates still further revision, we have exemplified in the commencement, within a few weeks, of the issue to the German infantry of a new small-bore repeating rifle, of the mechanism of which no one outside the military establishment of Germany has accurate knowledge. Mr. Greener gives a cut of and describes the German army rifle; but that weapon is now in process of supersession by the later and possibly improved arm. Since 1872 this is the third rearmament of the German infantry.

So far, actual experience has not revealed that, apart from rapidity of fire, the modern army small-bore magazine rifle is any more destructive at close quarters than the old smooth-bore musket. During the present disturbances in India a body of fifty insurgents charged upon a small detachment of British infantry armed with the Lee-speed magazine rifle, from a distance of fifty yards. During the rush of the enemy over this limited space the English fired seven hundred shots; yet more than half of the insurgents reached, untouched, the British bayonets. It is the experience of the sportsman, and this fact is strongly emphasized by Mr. Greener, that for accurate marksmanship every gunner should have the stock of his weapon specially fitted, in length, bend, cast-off, and in the shape of the butt, to his physical conformation. To make accurate shooting possible through the use of the modern small-bore military rifle by bodies of infantry, the stock of the gun of each individual soldier should be fitted to him. Of course, this is impracticable. Were it practicable, the total of casualties would be far more in proportion to the immense power and rapidity of fire of the modern military small arm than we have evidence of, so far as it has been employed in actual conflict.

Since the issue of the first edition of Mr. Greener's work the perfecting of small arms has made enormous progress. This had its first impulse in 1870, from which time we may date the general use of the breech-loading system. Previous to 1795 there was no trustworthy method of ascertaining whether a gun-barrel was or was not perfectly straight. Some years ago a fine collection of guns made by the most famous mediæval gunsmiths were tested, and not a single one was discovered that possessed a straight barrel. In 1795 a method of straightening gun-barrels from the inside was perfected by a Birmingham mechanic. A few years later another plan was devised, called the shading process, which ever since has been generally employed. Prior to 1870, next to nothing was known of the art of gun-barrel boring. The principle was not thoroughly understood until choke-boring came into use. This completely obviated the defect that previously was almost universal with double-barrelled shot-guns, of the right-hand barrel shooting with more accuracy than the left one.

It is generally supposed that the marvellously perfect guns of to-day are in their inception the product of modern invention. There is no greater fallacy. All that our gunsmiths have contributed in the way of original discovery in the art of gunmaking is found in the process of straightening and accurate boring of gun-barrels, the automatic cartridge ejector, and the percussion system; to these may be added the discovery of nitro-explosive or smokeless powders, which have contributed largely to the effectiveness of modern firearms. Of military weapons an entirely modern and original conception is the automatic machine gun. The mechanism for loading and firing is, after the initial discharge, operated by the gases of the powder.

The breech-loading system, which at this day is universally adopted, was employed in cannon as early as 1388. The powder only, however, was inserted in the breech block or movable chamber; the projectile was inserted by way of the muzzle. Breech-loading small arms were in use at the time of Henry VIII. of England. A hunting arquebus on this system, used by that monarch, is in the Tower of London. They were also in common use in Germany early in the sixteenth century. Henry IV. of France is said to have invented a breech-loading arquebus with which some of his troops were armed. The revolver was in use at the time of Henry VIII. The magazine, multiple-charge or repeating gun was made in the first years of the seventeenth century. The hammerless gun was invented early in the last century. In the Paris Museum there is one, a breech-loader, of the date of 1779. The single-trigger device for two-barrelled pistols was in use in the last century. The choke-bore system, applied to shot-guns, was employed in France in 1781. This brief résumé reveals that our modern gunsmiths, with the exceptions noted, are mere adapters. They have simply brought to great mechanical perfection systems and devices that originated none less than a hundred years ago.

To those who are interested in the subject, Mr. Greener's clear, lucid, and exhaustive treatise, free from technicalities, will prove most instructive and entertaining. There are no omissions—not even that of a comprehensive and satisfactory index. Mr. Greener gives an historical review of small arms and cannon from the earliest times. He describes the systems and devices used in modern and ancient guns; the present methods of construction, the shooting capabilities of modern shot-guns, pistols, and rifles, and the various sorts of ammunition and accessories to make them effective. He also explains to the novice how to use the gun. The book is copiously illustrated with cuts that not only give the external appearance of the various weapons and accessories described, but include skeleton diagrams of the working or mechanical parts.

Marchesi and Music. By Mathilde Marchesi. Harpers. Pp. 301.

"Vanity, thy name is woman," is the thought which obtrudes itself like a headline on the reader's mind as he turns page after page of these memoirs of a teacher of singing. But then, had she not a right to be vain? True, she seems to have been a failure as a singer (though only her successes are recorded here), but did she not give more or less instruction to most of the prominent prima donnas of our time, from Di Murska, Gerster, and Nevada to Calvé, Melba, and Eames? And were not all the great composers of the time eager to know her, to write notes to her and motives in her album? To be sure, some composers have been so rude as not to agree with this great woman. Rubinstein once behaved in a very bearish manner (246-7) towards her, insisting, in his brutal way, that girls studying for the Russian stage should learn to sing in the Russian language. Of course she "did not share his views," being of the opinion that the Italian florid school which was popular in her youth is all that anybody needs. But Rubinstein's impertinence was nothing compared to the effrontery of Wagner, who, while conversing with her one day at Vienna, declared his opinion "that every voice should be at the composer's command." Mme. Marchesi retorted with crushing frankness that "the composer must take into consideration the compass of different voices, by which interpretation, pronunciation, and declamation must naturally benefit."

It is a pity that Mme. Marchesi should

have marred her book with her irrepressible conceit, and her vain doctrine that the antiquated art of florid song, which is mere technical skill, without ideas or emotions, is the only kind of song; for otherwise her book has some interesting things to commend it. In the course of a long professional career, when it was a sort of Parisian fad to study with her, she met many eminent musicians, and she tells about them in an entertaining way. All the Parisian composers frequented her studio—there is no doubt of that—and she also met the leading German and Italian masters, not all of recent date. Rossini, for instance, was one of "our dear friends" who wrote in her album and invited her to his house, where, however, she found things "neither interesting nor pleasant. There was never any music, nor was it ever mentioned. The prevailing tone in the salon of the hostess was stiff and formal in the extreme"; and no wonder, for Mme. Rossini troubled herself very little about her guests, but gave all her attention to her sick dog. She must have been an odious creature, this Mme. Rossini, for our author herself was a witness when, "at an evening party in their own house, she reproached a lady for having taken ices twice." Of Rossini's remarks to Mme. Marchesi, one is of special interest. He declared that he preferred low voices, and that "singers who use not only the *voce di testa* (head-voice), but also *voce di capelli* (hair-voice)"—by which he meant the high c sharp, D, E, and F—"these offend my ear."

Mendelssohn was another of the older composers whom Mme. Marchesi knew well. She often found him seated at a table helping his children with their lessons. When there was music *en famille*, he took sometimes the tenor, sometimes the bass parts. "He never spoke of himself and his works." In Paris she met Liszt's mother, whose famous son was naturally enough the sole theme of her conversation. At Weimar, afterwards, she saw a good deal of Liszt himself. She found him cosmopolitan in taste, the leading champion of Wagner, but also a great admirer of Rossini. Once she aroused the jealousy of the Princess von Wittgenstein because Liszt wanted to leave the Princess and accompany her to a rehearsal. We also get a glimpse of Meyerbeer, whose mother told Mme. Marchesi that when her son went to Vienna as a pianist, he made the acquaintance of Beethoven and Clementi, "but the presence of these eminent pianists made him so nervous that he announced that he had injured his hand, and, bandaging it, he rushed away from the city without playing a note."

Mme. Marchesi has had a number of American pupils. With the majority, she says, the main idea is to get famous in a hurry. When parents bring their daughters to her, they generally ask, "How long will you keep her?" or "Please make it as short as possible," or "What is my daughter's voice worth?" or "Will she learn as much as Patti?" Our author has some excellent remarks on charlatan teachers.

Hallucinations and Illusions: A Study of the Fallacies of Perception. By Edmund Parish. [Contemporary Science Series.] Scribner. 1897. 8vo, pp. 390.

Among the most important of recent works adverse to telepathy is this of Parish, the bulk of which has already appeared in German. Its main purpose is to propose and defend a theory of the cerebral physiology of hallucination. To read it critically requires some knowledge of the anatomy of the brain and some acquaintance with the Nancy doctrine of hypnotism. Even with that equipment it cannot be read rapidly. Of the theory itself, we shall merely say that it is the one which Occam's razor requires that science should thoroughly try first. It is likely enough eventually to be modified, but at present it cannot be refuted, and it is simpler than any other. It has the great advantage, from the investigator's point of view, of connecting abnormal hallucinations with dreams and the sensory deceptions of health, for we cannot take a step toward the explanation of any phenomena until we can bring them into continuous connection with common experience. There is no science of anything but the ordinary course of nature. The author finds that all fallacious perception—and he shows that hallucination is perception—requires for its occurrence a state of *dissociation*; that is to say, a "state in which the nerve-stimulus no longer flows through the channels determined by habit and by the coöperation of simultaneous stimuli, because inhibitions or obstructions, whether from pathological or physiological causes, have been set up in the normal association-paths, or obstructions which normally exist in other connecting tracts have been weakened or altogether abolished." Such is a half-waking condition. Former writers distinguished between "illusions," or fallacious perceptions, and "hallucinations," which were supposed to be creations of the brain. But Mr. Parish argues that there are no hallucinations, in this sense. He gives the name hallucination to those deceptions which arise from a nervous discharge through an unusual channel, or, as he says, "by an act of forced association" (he uses association in the German sense, for the actual discharge of one centre upon another, not in the English sense, for the habit which regulates such a discharge). He restricts the term illusion to cases in which there is a lack of correction or adjustment of a perception owing to the blocking of an association-path.

If by telepathy be meant any mode of communication not generally recognized, then Mr. Parish, who believes people can communicate subconsciously at some distance by whispering with the mouth shut (according to the experiments of Hansen and Lehmann), may be reckoned as a supporter of telepathy. But if it means more than that, then it is contrary to Mr. Parish's contention that all hallucinations and illusions are to be explained by his theory. He is, therefore, led to devote a long chapter to the examination of the evidences of telepathy, wherein are contained some cogent objections.

Granting that the only mental causation is in reality physiological and cerebral, and granting that one molecule of nerve-substance acts upon another by attraction at a distance, we substantially admit a sort of telepathy for distances of that order. But were there so great stress of mind upon mind that one man's soul could cause a gross and vivid hallucination in another's, many miles away, one would think that within the enclosure of one skull nerve-fibres would hardly be needed. Still, it may be the telepathists are right. It would not be at all surprising to anybody who fairly estimates how much and how little science has yet won, to find some day that there were more things in heaven and earth than even *our* philosophy dreams of. But then there is no course for science to pursue but patiently to trudge on step after step, picking her way. She must admit new agencies when they have to be admitted, but not before.

On Blue Water. By Edmondo de Amicis. Translated by Jacob B. Brown. G. P. Putnam's Sons.

Those who enjoy descriptions of the scenery of the ocean will find some splendid examples of "word-painting" in this book. The author not only has the eye of an artist, but is also a master of language, to say nothing of his gift of poetical imagination. So far as the translation is concerned, however it may be in respect of fidelity, it is eminently praiseworthy in its results. The English is perfect, but with just that suggestion of Italian which gives piquancy, like the foreign accent which one often finds so agreeable in the speech of well-educated persons who have acquired our language.

Descriptions of the shapes of the clouds and the hues of the ocean, however, are not to be described, nor is it worth while to quote from them, even if they are exceptionally magnificent. In this case they come in naturally as incidents of the voyage, and there we may leave them. There are other descriptions in the book less pleasing, indeed, but more instructive. The author appears to have made the voyage from Genoa to Buenos Ayres in the steamer *Galileo*, in company with a few cabin passengers and fifteen hundred emigrants in the steerage, simply to observe human nature. Nearly the whole of the book is taken up with studies of character, slight, but extremely clever. So far as his cabin companions are concerned, his sketches are entertaining enough, but with one exception they arouse no deep emotion. But "the young lady from Mestre," in the grasp of death, but spending what was left to her of strength in deeds of mercy and sympathy, is too beautiful and pathetic a figure to fade quickly from the reader's memory. She seems, in truth, to purify the whole atmosphere of the ship, which would otherwise be disgusting enough. For it is the wretched emigrants that, after all, figure chiefly in the book. Loathsome from disease, from poverty, from toil; most loathsome from moral degradation and uncurbed passions—the author yet takes them to his heart in generous and patriotic sympathy. Victims of numberless ages of grinding oppression, even now hardly less cruel than formerly; condemned to starvation whether they toil or not—how is it possible to judge their ignorance and feebleness harshly! Their very hilarity distresses the author by its thoughtlessness, and, as he watches the forlorn procession leaving the ship, he cries out with shame:

"Endless, most pitiful! Family after family, children and yet more children; city faces and country faces, from northern Italy, from southern Italy; good honest creatures, brigands, invalids, ascetics, old soldiers, beggars, rebels, passing ever faster and faster, as if urged by the dread of not reaching America in time to get their bit of bread and their strip of earth. And at the back of all this grievous misery, imagination held up to me, as in mockery, the patriotic rejoicings of the idle, the prosperous, and the unthinking, as they shout with holiday enthusiasm on the banner-dressed and glittering squares of Italy. I felt a humiliation

which made me shun the regard of foreigners who were on the ship with me, and whose affected exclamations of pity and surprise were only so many reproaches to my country. And still those ragged garments, those white hairs, those withered women, those children without a country, that nakedness, that shame, that misery kept filing on."

And yet this pitiful horde forgot everything, in the very moment of disembarking, to murmur to their angelic benefactress, "the young lady from Mestre," greetings in which there seemed to go out to her "all the good and all the purity which the bitterness and sorrow of a toilsome existence" had left in them.

German Orthography and Phonology: A Treatise with a Word-List. By George Hempl, Ph.D., Professor of English Philology and General Linguistics in the University of Michigan. Boston: Ginn & Co.

This manual meets a want that has long been felt alike by teachers and by students of the German language. Only too often in reading aloud they find that they do not know how to pronounce a proper name or a word of foreign origin, or are at a loss on what syllable or word to place the stress; in many cases, too, the teacher is unable, from lack of proper training in phonetics, to define the true character of a sound. On all these points, and on many more, the necessary information can be obtained from this book.

It is fortunate that a man of Prof. Hempl's scholarship has undertaken the work, which required a complete mastery, not only of the German language and its history, but also of phonology. As a matter of course, the author has made use of all the important books on his subject, and is to be commended highly for having taken such pains in collecting material from different sources and making it, as the Germans say, *mundgerecht.* Prof. Hempl has also added a considerable amount of original work, which entitles the book to a high rank among publications of this kind. Especial mention should be made of the chapters on Word-Stress and Sentence-Stress. Another subject not usually treated in grammars is the development of German type, and to this the author devotes a whole chapter. Here are traced the various influences which have brought about changes in the styles of printed and written characters—changes which are amply illustrated by examples.

Everywhere the author has aimed at completeness; thus, in the matter of orthography, he has not confined himself to the so-called Prussian system, but discusses also the official orthography of Austria and Switzerland, and enumerates the principal deviations. In his word-list we find that the pronunciation of no one province has been preferred to that of any other, but wherever differences exist they have been noted. For the phonetic transcription of the words, Prof. Hempl has had to make use of a rather elaborate system, the key to which looks somewhat forbidding. The learner can, however, with some effort master this difficulty, which was unavoidable, since the author's object was to reproduce the words precisely as they are spoken. This word-list has not yet appeared in full, but may shortly be expected, together with a complete index, by which the value of the present volume will be further enhanced.

There are some points of minor importance on which one may differ with the author. In a few cases it might have been better to be a little more explicit. For instance, the average reader can hardly be expected to know what the "Sabellic" and "Venetic" alphabets are. In other cases too much space, perhaps, is given to a subject. One may also doubt whether the expression "mutated vowels" (in place of the time-honored "modified vowels") will meet with final acceptance. But these trifling matters by no means impair the value of the book, which is sure to become indispensable to students of the German language, and they ought to be grateful to Prof. Hempl for his assiduous and scholarly labors. Thanks are also due to the publishers, who have produced a book which, with its beautiful reproductions of types and in its whole make-up, is a credit to American printing.

BOOKS OF THE WEEK.

Adams, Mary M. The Choir Visible. Chicago: Way & Williams. $1.50.
Adderley, James. Paul Mercier: A Story of Repentance among Millions. Edward Arnold. $1.25.
Bacon, Commander R. H. Benin, the City of Blood. Edward Arnold. $2.
Barton, W. E. Sim Galloway's Daughter-in-Law. Boston: Pilgrim Press.
Bishop, Mrs. Isabella Bird. Korea and her Neighbors. F. H. Revell Co. $2.
Briscoe, Margaret S. Jimty, and Others. Harpers. $1.50.
Columbia Verse, 1892-1897. W. B. Harrison.
Commelin, Anna O. Not in It. Fowler & Wells. $1.
Crockett, Rev. W. D. A Harmony of Samuel, Kings, and Chronicles. New York: Eaton & Mains. $2.
D'Alviella, Comte Goblet. Ce que l'Inde doit à la Grèce. Paris: Leroux.
Edridge-Green, F. W. Memory and its Cultivation. Appletons. $1.50.
Elton, Emily D. A Mince Pie Dream. E. R. Herrick & Co. $1.25.
Fisher, S. G. Men, Women, and Manners in Colonial Times. 2 vols. Philadelphia: J. B. Lippincott Co. $3.
Fuller, Hulbert. Vivian of Virginia. Boston: Lamson, Wolffe & Co. $1.75.
Gray, Maxwell. Sweethearts and Friends. Appletons. $1.
Greene, Waverly. George Forest. G. W. Dillingham Co. 50c.
Haines, H. S. American Railway Management. London: Chapman & Hall; New York: John Wiley & Sons. $2.50.
Handbook to Christian and Ecclesiastical Rome. Part II. The Liturgy in Rome. London: A. & C. Black.
Loyd, Lady Mary. New Letters of Napoleon I. Appletons. $2.
Mackie, Pauline B. Mademoiselle de Berny: A Story of Valley Forge. Boston: Lamson, Wolffe & Co. $1.50.
Protestant Episcopal Almanac and Parochial List. Whittaker. 25c.
Seawell, Miss M. E. The Rock of the Lion. Harpers. $1.50.
The Century. May-Oct., 1897. Century Co.
The Little Dame and the Wild Animals. 2d ed. Baltimore: Williams & Wilkins.
The Tragedy of Hamlet. With Illustrations by H. C. Christy. Dodd, Mead & Co. $2.
Thwaites, R. G. Afloat on the Ohio: An Historical Pilgrimage. Chicago: Way & Williams. $1.50.
Trine, R. W. In Tune with the Infinite. T. Y. Crowell & Co. $1.25.
Vose, Rev. J. G. Children's Day Addresses. Boston: Pilgrim Press.
Vuillier, Gaston. A History of Dancing. Illustrated. Appletons. $12.
Wallace, Lew. The Wooing of Malkatoon. Commodus. Illustrated. Harpers. $2.50.
Wilson, J. Self-Control; or, Life without a Master. Newark, N. Y.: Courier Publishing House; New York: Lemcke & Buechner.

Not for Children Only.

JUST PUBLISHED.

A BOOK OF VERSES FOR CHILDREN.

Compiled by EDWARD V. LUCAS. With covers and frontispiece in colors. 12mo, $2.00.

While primarily intended for the young, it will please older readers too. Among the poets represented are Browning, Burns, Coleridge, Marjorie Fleming, the Howitts, Longfellow, J. W. Riley, Scott, Shakespeare, Stevenson, Ann and Jane Taylor, Elizabeth Turner, etc. Some of the quaint conceits of "Lewis Carroll," "Anstey," and Lear are also included.

Send for new Catalogue.

Back Numbers of "The Nation."

In response to frequent inquiries from subscribers:

An incomplete set of THE NATION has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. The bindings generally count for nothing, owing to great diversity of styles. Volume I. has readily brought $10 and upward when complete, bound or unbound, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

Complete sets, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

Single numbers not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., Mr. A. S. Clark, 174 Fulton St., or H. Williams, 25 East Tenth Street, New York.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer or to advertise in THE NATION.

[Publication was begun July 1, 1865, Vol. I. comprising the last half year. Two volumes per year have since been issued, Vol. LXV. comprising the last half-year of 1897.]

Tuscan Songs

Collected, translated, and illustrated by FRANCESCA ALEXANDER. With 108 superb, highly artistic full-page designs. Large quarto, $25.00 *net*.

Edition de Luxe, limited to 50 numbered copies, each with Miss Alexander's autograph and artist's proof Illustrations. Large quarto, $100 *net*.

From the New York Tribune.

This collection of folk-songs from the roadsides and fields of Tuscany is one of the most enchanting ever made. . . . Her peasants are true peasants of Tuscany, and added to the careful portraiture is that naïve charm which lies in all really sympathetic studies of the Italian rustic. The effect of the pictures and the text is enhanced by the lovely floral decorations flung gracefully on every page. Altogether the study of these songs is rendered more and more delightful by the editor's artistic accompaniment. The songs themselves belong among the tenderest and most exquisite flowers of artless poetry. . . . The magic of beauty is over them all. It may be added that this beauty has received sympathetic handling in the present volume. It is superbly made.

Sold by Booksellers. Sent, prepaid, by

HOUGHTON, MIFFLIN & CO., Boston.
11 East 17th Street, New York.

25 cents a copy. THE 25 cents a copy.

PALL MALL MAGAZINE,

GINN & COMPANY, Publishers,

BOSTON. NEW YORK. CHICAGO. LONDON.

LONGMANS, GREEN, & CO.'S NEW BOOKS

The Life and Times of Cardinal Wiseman

By WILFRID WARD, author of "William George Ward and the Oxford Movement," "William George Ward and the Catholic Revival," etc., etc. With 3 Portraits. 2 vols. Vol. I. pp. xii+579, Vol. II. pp. ii+656, $6.00.

"A generation has passed away since Cardinal Wiseman's death, and although many readers are likely to remember the extraordinary demonstration in London on occasion of his funeral, it is probable that few can recall the man himself in the days of his prime, or are familiar with the story of his life The present writer can only hope that he may succeed in imparting to his readers some, at least, of the great interest which he has derived from the study both of the Cardinal's personality and of his career. Some of the events recorded, though long past, seem to supply the key to more recent developments of religious thought, which occupy the attention of many of us. And the Cardinal himself, highly gifted though he was intellectually and morally, was also abundantly endowed with those specially human qualities which command the interest of students of life and character in every age."—*Extract from Preface.*

"Mr. Ward makes no indiscreet or unkind revelations. . . . His work is, in fact, a monument of judicial fairness. . . . There are features in the present biography that guarantee its permanent value as a contribution to the ecclesiastical history of our age. Briefly, it is the work of a scholar and a gentleman; its style is easy and readable, and there are evidences throughout of careful study and accurate statement. . . . Mr. Ward is to be congratulated on an admirable piece of work, and we cannot wish him better than that he should continue his labors in the same field."—*Daily Chronicle.*

Servia: The Poor Man's Paradise.

By HERBERT VIVIAN, M.A., Officer of the Royal Order of Takovo. With Portrait of the King and a Map. 8vo, pp. lvi+300, $4.00. [*Just Ready.*

"We do not seem to suspect that within little more than two days' rail from London there lies an undeveloped country of extraordinary fertility and potential wealth, possessing a history more wonderful than any fairy tale, and a race of heroes and patriots who may one day set Europe by the ears."—*Extract from the Preface.*

The Supernatural in Nature.

A Verification by Free Use of Science. By JOSEPH WILLIAM REYNOLDS, M.A., Past President of Sion College, Prebendary of St. Paul's Cathedral. New and cheaper Edition. Revised. Crown 8vo, $1.25.

"The author has been guided by deep knowledge and faith in his far-reaching studies. In this and all his other works he produces convincing evidence of the truths of revealed religion in beautiful language, with scientific accuracy carried to the highest pitch of knowledge and thought."—*Extract from Preface by* MAJ.-GEN. A. J. H. ELLIOT.

The Origin and Growth of Plato's Logic.

With an Account of Plato's Style, and of the Chronology of his Writings. By WINCENTY LUTOSLAWSKI. 8vo, $6.00.

A Child's History of Ireland.

From the Earliest Times to the Death of O'Connell. By P. W. JOYCE, LL D., author of "A Short History of Ireland," "Irish Names of Places," etc. With a specially constructed Map, and 160 Illustrations, including Facsimile in full colors of an Illuminated Page of the Gospel Book of MacDurnan, A. D. 850. Crown 8vo, $1.50.

Ministerial Priesthood:

Six Chapters Preliminary to the Study of the Ordinal. With an Inquiry into the Truth of Christian Priesthood, and an Appendix on the Recent Roman Controversy. By R C. MOBERLY, D D., Regius Professor of Pastoral Theology in the University of Oxford, Canon of Christ Church. 8vo, $4.00. [*Just Ready.*

The Nation.

NEW YORK, THURSDAY, DECEMBER 30, 1897.

The Week.

The spectacle of 50,000 operatives in New England cotton mills confronting a 10 per cent. reduction of wages is not a cheerful one for the holiday season, and it furnishes the occasion for a great deal of very serious discussion. Such a cut-down would attract no little attention from the general public at any time, and it cannot fail to provoke an animated controversy as to the influence of legislation in the matter, coming as it does so soon after the passage of a tariff law which was vouched for as the promoter of prosperity. There is no doubt whatever that other influences than the tariff have been the controlling factors in causing action which the manufacturers would avoid if they possibly could, but the Manchester *Union* points out one little considered effect of such legislation which has long been operative. It declares with a conviction which seems to be born of knowledge, that "for years New England cotton-spinners have hidden behind a protective tariff, and by its aid have been able to make large profits out of poor goods, poor work, and antiquated, wasteful methods of business"; whereas the time has at last come when they find their market invaded by Southern rivals against whose superior natural advantages no tariff can be framed. Dependence upon the tariff has really weakened the New England manufacturers, and they must now face a new situation without that confidence and readiness which is cultivated by self-reliance.

It is very significant that the labor organizations of the country are throwing their influence against the annexation of Hawaii. An earnest protest against the scheme was recently made by this element in California, and since then the American Federation of Labor has shown that workingmen throughout the land sympathize in this respect with those on the Pacific Coast. The Federation adopted a resolution disapproving of annexation on the ground that it "would be tantamount to the admission of a slave State, the representatives of which would necessarily work and vote for the enslavement of labor in general"; urging the Senate to reject the treaty, and take such other steps as may be necessary to maintain amicable relations with Hawaii; and providing that the executive council shall present these views to Congress, and, if necessary, to the President. Such a pronunciamiento from such a source will have much weight with politicians who have no pronounced convictions on the subject, especially with the members of the House, if the treaty shall fail and the scheme shall be pushed by joint resolution. A Representative who sees no particular reason for annexing Hawaii anyway will easily be persuaded to oppose the project if "organized labor" in his district is ready to fight a Congressman who favors the creation of what it considers likely to be "a slave State."

Secretary Gage has written a letter to Mr. Samuel Gompers, President of the American Federation of Labor, in reply to some silly resolutions passed by that body at its meeting in Nashville, declaring their opposition to the "Gage financial bill," the effect of which, they say, would be to "rivet the gold standard on the people of the country and perpetuate its disastrous effects in every form." The Secretary alludes first to the fact that the gold standard has been riveted on the country for more than sixty years, and that it would be more to the purpose to show how it has been disastrous than to denounce people who think that it has been beneficial. Mr. Gage declines to be put in a category different from that of his fellow-citizens generally, including wage-workers, because he happens to hold an economic opinion different from that held by this Nashville meeting. He insists that the standard of value which is best for all the people is the best for himself, so that the only real question to be considered is whether these Nashville delegates, or the whole Federation of Labor, is more likely to be right in its economic opinion than Mr. Gage. Not arrogating to himself any superiority in this respect, although experience and training might give him some claim of that sort, he affirms that majorities cannot decide what is best in matters of finance, since the opinions of any mass of men cannot be superior to those of the wisest man among them. And so he unhorses the Gompers crowd completely if we can suppose that they were ever horsed, and he does this without using a hard word or indulging in the smallest sarcasm.

A brief speech made by Senator Hoar of Massachusetts just before the holiday recess deserves more attention than it has received. The old question had been again raised whether alcohol used in the arts ought to be taxed about 1,300 per cent., as now, and the suggestion that this tax should be removed had brought out the fact that such a change would probably decrease the revenues about $10,000,000 a year. Mr. Hoar pointed out that here was a class of manufacturers engaged in a most beneficent industry who are likely to be driven out of their foreign business—at any rate to have it largely curtailed—because, almost alone of the manufacturing industries of this country, they are taxed 1,300 per cent. on their material; and he maintained that, "when we confront that condition of things, we are entitled to have some other reasons than a statement that we want the money." He proceeded to show that an additional tax of a dollar a barrel on beer would remove all the financial trouble in the matter of deficit, and that the brewing industry could easily stand the added tax. He added this frank confession of why the tax will not be laid:

> "We do not dare to compel that industry to pay a reasonable and proper tax, because we are afraid of the political power the brewers will exert, determining the political power in this country between different political parties."

When the dispatches from Havana and Madrid speak of setting up immediately the new autonomous government in Cuba, it is important to understand just what is meant. It is not meant that the farce of a popular election is at once to be gone through, nor that any simulacrum of parliamentary government is to be set up. It is only a temporary and transitional rule that is to be instituted. This is based upon one of the supplementary articles of the plan of autonomy itself. It provides that the Governor-General, whenever he thinks the moment opportune, may appoint, with the consent of the home Government, the members of his cabinet, and "with them conduct the government of Cuba until the establishment of the insular parliament." Doubtless no other approach to the form of autonomy could be made, with the island distracted and ravaged as it now is; but it should be understood that it is autonomy in its lowest terms that is to be tried first.

Great Britain has refused to coerce Canada, at the request of the United States (or, rather, at that of John W. Foster), into discontinuing pelagic sealing. Lord Salisbury informs our Ambassador that England has very little direct interest in the affair, and that, as the Canadians who are interested are unwilling to enter into any such arrangement, he should not be justified in agreeing to the proposals of the United States. Except making another face at England, we do not see that we have any remedy. We can forbid our own citizens to take seals on the high seas, but if we want to get the Canadians to stop it we must make it an object to them to do so—that is, we must agree to a general commission to settle all differences, including Dingleyism, as Sir

Wilfrid Laurier proposed. As for putting an end to pelagic sealing by Americans, it is high time we set about it if we may believe Mr. Hitt's awful stories about renegade American sealers.

There seems to be no reason to doubt that, as a result of the proceedings of the commission to settle the Bering Sea claims, lately sitting in Boston, the damages we shall have to pay the Canadians will be at least $500,000. This is only what was to have been expected. It is only what was said by responsible Senators and Representatives when Congress rejected with contumely Secretary Gresham's arrangement to settle the whole thing out of hand for a lump sum of $425,000. The proper committees in both houses advocated that settlement. It would be speedy and, being a compromise, it would certainly be cheaper than an award made according to strict legal right. But the headstrong House, under the spurring of Mr. Hitt, refused to vote the money. The sum was too large; some of it would go to renegade Americans (Oh, Liberty and the Eagle!); anyhow, we didn't have to pay it yet; even if we had to pay more in the end, we should have had the pleasure of making the Canadians wait, and have kept up our reputation of being bad losers and ugly customers in international quarrels. What perhaps most influenced the House was Mr. Hitt's assertion that our laws forbade pelagic sealing, and how then could we pay damages to Americans masquerading as Canadians? That no such law existed, save in the statute-book of his imagination, he has himself now had to confess by bringing forward and passing such an enactment in the present Congress. So he has learned something; but it must be said that when it costs the country $75,000 to $100,000 to educate one Congressman about one law, free schools are not what they seem.

Opinions continue to differ as to who caused the great advance in wheat this year. Some time ago, when prices were moving up on the eve of last year's Presidential election, Mr. Bryan explained that the tricky Money Power was doing it all, so as to delude the farmers into voting for the Republican party. The chairman of the Pennsylvania Republican committee boldly affirms that the thirty or forty-cent rise this season was merely a Christmas present of the Republican Administration to the Pennsylvania farmers. On the other hand, Mr. L. Z. Leiter of Chicago says his boy did it—that at any rate the youngster has added fifteen cents a bushel to the world's price of wheat, and is "a benefactor of the agricultural industries of the country to that extent." We must confess our inability to discriminate between these rival claimants—that is, if they may properly be called rivals. Mr. Bryan's theory is still available, of course, and that profound economist and statesman, we presume, regards the pending discussion as confirmation of his own views of 1896. The Republican party is again the end, and young Mr. Leiter, representing, of course, the Money Power, is the means. What puzzles us, however, is the motive either of the party or of the Power in advancing wheat at this stage of the game. The elections of 1897 are over; why, then, waste resources now? Why not rather wait until, say, October, 1898, and then try the brilliant *coup de main* of a fifty-cent advance in wheat before election day?

The solid legal bulwark which Platt has erected around his machine was strengthened by an additional court decision last week. A motion for an injunction against one of his district primaries, on the ground that the legal requirements had not been observed by the Platt managers of it, was denied by Judge Beekman, who held that, under the decision of the Court of Appeals, which we have quoted recently, the matter was one with which the courts could not interfere, the regularly constituted party authorities having absolute power to determine such matters. That is to say, under the election laws of the State, the party machine is the final court of appeals in all questions relating to primaries and conventions, and since Platt is absolute boss of his party machine, he is himself the fountain of its primary law. The absurdity of attempting a reform of his primaries by going into them is too obvious to need comment. Reputable Republicans have become so generally convinced of it that not a man of them has been deluded into those primaries this year, and for the first time since he was boss Platt stands alone with his own kind. This is a great step in advance, whatever may be the result of the present very formidable effort to create an opposition organization.

There seems to be no doubt that the incoming Croker administration has made up its mind to attempt to get possession of the Board of Education almost immediately after taking office. Its legal advisers have found what they consider a loophole in the new charter through which they can enter upon their scheme. In one section of the charter, that relating to the Mayor's power of removal, it is expressly stipulated that he shall not have power to remove members of the Board of Education during the first six months of his term, the period in which he is permitted to remove all other heads of departments. This stipulation is conclusive evidence of the intent of the framers of the charter to have this board continued without sudden change in its complexion. The Tammany seekers for "places" have discovered in another section, that relating to the composition of a new school board for the enlarged city, a phrase which they hope will enable them to get rid of seven members of the present New York board, and have Mayor Van Wyck put as many good Tammany men in their places, thus giving Tammany a majority. This phrase is, "The Board of Education, *as constituted prior to the passage of this act.*" The Tammany contention is that the seven members appointed by Mayor Strong since the passage of the act on May 5 last, will be not legally in office under the new city government, since they cannot be said to be a part of the board as constituted on May 5. It is an obvious quibble, but Tammany proposes to take its chances on having it sustained by the courts. The fact that it is able to make it, is the first notable instance we have had of the slipshod workmanship of the new charter. We shall have more of these as time advances, for the instrument is full of contradictions and inconsistencies which will furnish a fruitful field for litigation.

Mr. Croker's determination to have a club with nothing but simon-pure Tammany Democrats in it is commendable. He says he does not enjoy himself in the society of Democrats with Mugwump tendencies, and, that being the case, he ought to supply himself with a club free from such annoying persons, especially as he is willing and able to pay all the necessary expenses of obtaining select society. What he has in mind clearly is the establishment of a Croker court in this city, on the lines of the one which has given him so much genuine enjoyment at Lakewood. It will come high, but he must have it. The existing club upon which he has fixed his favor has $200,000 of debt, and was recently thinking of closing up and selling out. Of the debt, Croker says, as Webster said of his debt, "Let it be paid!" Unlike Webster, however, he will see to it that the money is forthcoming. The club-house was said to be too small. "Put three or four stories on top of it," says the King. The membership is not large enough to pay running expenses. "Increase it to 1,000 or 1,500," says the King. These things were said one day, the next the thing was done. Tammany men are falling over one another in their eagerness to get into the court club-house, to help pay its debt, and to aid in lifting its roof. "We shall have," says one of them, "the finest cuisine in the city." Nothing is said about the bar, but it should be the longest in the city, even if the club-house has to be deepened as well as heightened. The statesmen of the court must have agreeable lounging-room while discussing the science of government.

The municipal elections in Massachusetts, which have strung along through the month and ended with the voting in Boston on December 21, have been characterized by an unusual relaxation of party bonds. A Governor of the State was chosen in November, but whether a city went Republican or Democratic then had little to do with the way it would go in the choice of a Mayor in December. In many places, citizens' candidates were put in the field on purely local issues, and these issues were the only ones which cut any figure in the canvass. Boston reversed its position, so far as national politics entered into the contest, between early November and the 21st of December, a plurality for the Republican candidate for Governor seven weeks before being supplanted by a plurality of about 4,000 for the Democratic Mayor, Josiah Quincy, who was running for reëlection. The Republicans had a good candidate, and the hopes which they based upon the success of their party last month were strengthened by an attempted division of the Democrats through the nomination of a silver man. This candidate was a loud-mouthed politician, who drew great crowds of apparently sympathetic hearers whenever he spoke, but he polled less than 3,000 votes, as against over 40,000 for Mr. Quincy. Another proof is thus afforded of the deceptiveness of large audiences and noisy "enthusiasm."

Foreign trade is now the life of England, and must be protected and fostered at all hazards. Though not so immediately vital to Russia, with her vast territory to draw upon for supplies, it is yet no doubt mainly a question of trade with her, too, in the Chinese embroilment. Her aims are partly military and strategic, to be sure, but her railroad interests in Mantchuria, the rapid pushing of Russian merchants into North China, the concessions Russian subjects are obtaining for mining and for exploiting natural resources in every conceivable way—all point to commercial expansion rather than military glory or the acquisition of more territory as the main object. Germany frankly confesses that her seizure of Kiao-Chau Bay is for purposes of trade. The trading interests of France in South China are what has started the French men-of-war from Toulon. The Jingoes in this country who have souls so very far above trade, ought to take heart when they see four fleets put to sea purely in the interests of commerce.

This is undoubtedly the only aspect of the threatened partition of China which directly concerns the United States. We have treaty privileges and trade relations in China which it is the business of the State Department to see that no readjustment of Chinese affairs shall impair. With that our duty in the matter begins and ends. It is not for us either to protest against the seizure of Chinese territory or to prevent it. If our treaties are taken over intact, as they should be, by any Power assuming sovereignty in China, that is all we need ask. Incidentally, we may be led to see the reasonableness of Japan's request that we should take over her treaty with Hawaii, if we annexed that country and extinguished her sovereignty. We observe that Senator Morgan, who was ready to snap his fingers at the Japanese contention, now proposes to make war on all Europe unless our similar contention in China is respected. The feelings of the Chinese in all this, of course, have nothing to do with the case. They are not even to be given their choice of the way they will be cut up. All that is expected of them is to be still, and send in immense orders for foreign goods. They may plead poverty. They may say that three yards of cotton cloth per capita is enough to satisfy their wildest dreams of luxury. No matter for that; they are there to trade like fury, and trade they must, or else the desires and expectations of four powerful European nations will be disappointed, which would be absurd.

An address was delivered by the Rt. Hon. Leonard H. Courtney before the Royal Statistical Society in London on the 14th inst. on "Jevons's Coal Question, Thirty Years After." Thirty years or more ago Prof. Stanley Jevons published a book entitled 'The Coal Question,' which created no little excitement at the time, affirming that English manufacturing and commercial supremacy was due mainly to her coal deposits; that these deposits were exhaustible, and that they would probably be so far reduced within a century that the commercial supremacy which Great Britain then enjoyed would cease. He did not say that the mines would be exhausted or the country ruined, but that her commercial superiority would come to an end. No matter what might be done in the way of new inventions, in which other nations would share equally, the supremacy of England would depart with the cheapness and abundance of her coal. The subject of Mr. Courtney's discourse was a review of Prof. Jevons's treatise and a comparison of facts then existing with those now known. Thirty of the one hundred years within which Prof. Jevons believed that the end of British supremacy would come, have passed. Do we find any indication that his predictions are in the way of fulfilment? At the time when he wrote, the output of British coal mines (then 100,000,000 tons per annum) was increasing at the rate of 3½ per cent. per annum. If the rate of increase should continue till the year 1896, it would reach 278,000,000 tons. But in fact it was only 195,000,000 tons. Jevons did not say that it would continue to increase at the former rate, but that, notwithstanding all that science and invention might do to economize its use, there would still be some increase. The output seems to have nearly doubled in thirty years. Yet the money price of coal has not increased since Jevons wrote, but has fallen from 8s. 9d. to 7s. 2d. per ton. In some coal fields (notably in Shropshire, Cheshire, Staffordshire, Worcestershire, and Gloucestershire) there has been a decrease of output.

"The source of great danger to our industrial supremacy which Jevons detected lay in the United States," says Mr. Courtney. What do the statistics of coal production show? In the year when Jevons wrote, the output here was 24,000,000 tons. In 1896 it was 170,000,000 tons, or only 25,000,000 tons less than England's. The price at the pit's mouth in England was 6s. 6d.; in the United States it was the equivalent of 4s. 8d. Still more was Jevons concerned with the iron trade of Great Britain. "Expanding as it does," he said, "the iron manufacture must soon burn out the vitals of the country, and it is possible that there are those now living who will see the end of the export of crude iron." The maximum of British exports of iron of all sorts was reached in 1882 (4,354,000 tons). In 1896 it was 3,550,000 tons, although the decline of export was accompanied by a decline of price. The production of pig iron in the United States now exceeds that of Great Britain in the ratio of 6 to 5, while our production of steel is double that of Great Britain. In fact, England is now a considerable importer of steel from this country. These facts point to an early dispute in neutral markets by the United States in the supply of all kinds of iron, and after that of other things as well. Mr. Courtney considers at some length the question what will the English people do, or what will happen to them, when their commercial supremacy passes away. One thing must happen: population cannot increase at the same rate as heretofore. There will be more emigration, perhaps more deaths, certainly fewer births. There will be a transition of industries, the nature of which cannot be predicted. Yet Mr. Courtney concludes that "the constant progress of invention, the increasing facilities of transport, and the progressive subdivision of labor all tend to make the conditions of existence easier; and it may be found possible to support without difficulty, after a decline in our mining and manufacturing supremacy, a population which had come into existence under the impulse of a prosperity which will have waned if it has not entirely passed away."

TERMS OF CUBAN AUTONOMY.

The full Spanish text of the new home-rule constitution for Cuba has at last reached this country, and its details do not in all respects bear out the telegraphed summary. As Congress and the country, at President McKinley's suggestion, are now waiting to see if Cuba will accept this autonomous government, and if it will bring peace to her distraught inhabitants, and as, therefore, the question of peace or war between Spain and the United States may turn on the terms of this proposed Cuban home rule, it is of obvious importance to know what those terms are.

A defect, or danger, in the form of this grant of autonomy at once confronts the reader. It is made by royal decree, bearing date November 25, 1897. This is a legal procedure when the Cortes are not sitting, but it requires the subsequent approval of the Cortes. But this approval may not be given, and then the whole edifice would fall to the ground. This peril is recognized in the expository portion of the document, when Prime Minister Sagasta regrets the necessity of resorting to the royal decree, but expresses the hope that public opinion will support him, and that "the sanction of the Cortes" will be given in due time. If the plan works well, if the Liberals can keep their heads above water, the sanction will no doubt be forthcoming when the Cortes are summoned; but if not, not. It would also appear that the Cortes retain the right at any time to repeal or amend the Cuban Constitution at their own pleasure. At the outset, therefore, one sees how far the grant of home rule to Cuba is from being secure and unconditional. It is, in fact, very much like our boasted home rule in New York city—subject to constant interference, or even absolute repeal, by the Legislature.

Nor can one read far in the provisions of the decree without seeing that the sovereignty of Spain in Cuba is intended to mean something widely different from the sovereignty of England in Canada. It is to be not only an acknowledged sovereignty, but an active and controlling sovereignty. This is, in truth, frankly avowed by Sagasta. His first concern, he declares, has been to draw a constitution which should "affirm and strengthen the bond of sovereignty." The "central authority," he adds, has been "in no wise lessened or weakened." Inspection of the chapters relating to the colonial legislature, judiciary, and finance will show that this confidence is not misplaced.

First of all comes the enormous power conferred upon the Governor-General, who is to be named by the home Government. He has the right to summon, to adjourn, or to dissolve the Colonial Parliament. He has a suspensory veto over its legislation. He has in his hands all the patronage of the public service. He is Commander-in-chief of the army and navy, and has absolute control even of the police. He has the power of naming life members in the Upper Chamber, or "Council of Administration." He has the right to propose laws in the Colonial Parliament. He has the right and duty, in certain specified emergencies, to make himself dictator, and to govern the island without reference to the laws passed by the Colonial Parliament.

As if this were not enough, care has been taken in the composition of the Colonial Parliament to make sure that it shall never escape from Spanish control. The House of Representatives is to be composed of members elected by universal suffrage, one for each 25,000 inhabitants. But of concurrent powers with this chamber is the Council of Administration, numbering thirty-five members. Of these, eighteen are to be elected by a limited suffrage, and seventeen are to be appointed by the Governor-General. But the seventeen are to be life members, while the eighteen are to go out, one-half every five years, or in entirety whenever the Governor-General thinks fit to dissolve the Council. When one takes in the fact that this body, so controlled, has as much authority in legislation, even in financial legislation, as the House of Representatives, a curiously hollow echo seems to make itself heard in Cuban autonomy.

Further to buttress Spanish supremacy, the control of the judiciary is entirely reserved to the home Government. This is highly important, because all the conflicts of interpretation, all the disputes about rights and privileges, under the new Constitution, are to be referred to the tribunals; and these are to be exclusively filled with Spanish judges. The right to make treaties of commerce affecting Cuba is also reserved to the home Government. In form, the Colonial Parliament is to have the right to enact a Cuban tariff, but in effect this grant is so hedged about in ways already indicated, and by special provisions requiring duties to discriminate in favor of Spanish products, that it really amounts to little or nothing. As for the public debt, including the present war debt, its apportionment between Cuba and Spain is to be made wholly by the Spanish Cortes.

In the face of these critical features of the home-rule scheme for Cuba, it is useless to discuss the amount of local control of local affairs that really is given, or seems to be given. The great essentials of government are kept strictly within the grasp of Spain; the rest may be a pretty plaything, but it does not count. Señor Moret, the Minister for the Colonies, who is supposed to have drawn this Cuban Constitution, is a man who has lived in England and has made a study of English colonial legislation. References to British examples of colonial government appear in the expository part of his work. But he puts aside English models in favor of a form which is "characteristic of the system of Spain." There is his fatal vice. Despite what he himself calls the "immense calamities (*immensas tristezas*) of our colonial history," he adheres to the system which has been their chief cause, and offers a form of autonomy which, even if put forward in perfect good faith, even if operated with the best intentions, could prove only a mockery and a source of fresh disaster to the Cubans.

SOUTHERN CURRENCY OPINIONS.

We have already commented on the bankers' convention held at Atlanta, Ga., on the 15th of the present month, and have expressed the belief that it would prove potent for good in the coming contest for sound money. Our belief was based on the fact that the banking fraternity in the South has never been exposed to any rancorous animosity among the people of that section such as is said to exist against the same class in the trans-Mississippi region, but is respected and deferred to in a marked degree by people in other walks of life. This fact has been corroborated by the tone of the Southern press since the convention adjourned. Among the comments which have fallen under our notice, we select those of two characteristic newspapers, the Macon *Telegraph* and the Atlanta *Constitution*. But before examining them we will advert once more to the ideas advanced by the convention itself. It is true that nothing was said about the single gold standard, but, on the other hand, nothing was said about silver at 16 to 1; and, since everybody in the South is supposed to be dying for this, the latter omission must be considered tantamount to condemnation. The whole drift and purport of the resolutions looked to the improvement of the currency, and the final settlement of it by business instead of political methods, by banknotes instead of Government notes, by commercial instead of legislative action. "Take the banking business out of politics; take the Government out of the banking business." Nothing could be more practical or less ambiguous than these two demands. "Avoid the expense and dangers attendant on Government issues by the retirement and cancellation of the greenbacks and Treasury notes of 1890, by the substitution of banknotes." Such a declaration five years ago would have taken the breath away from all Southern politicians, with two or three exceptions. It would, we are obliged to confess, make many Northern ones gasp to-day.

To our surprise, we find an article in the Atlanta *Constitution*, more than a column long, under the caption "A Long Step Forward," commending the action

of the convention as a whole. Although it does not approve of the retirement of the greenbacks, it considers that a minor matter in comparison with the reform of banking methods by the substitution of circulating notes based on assets of the banks instead of Government bonds. This it calls "the Democratic plan of currency reform," a claim which we shall not call in question if it supplants the Bryan plan of silver at 16 to 1.

The Macon *Telegraph* adopts a more positive tone. It says that the bankers' convention represented the business interests of the entire South, and that there is practical unanimity among those interests in sustaining the Atlanta resolutions. The only opposition to them is among the unthinking classes and the politicians who pander to them. These men, although they make more noise than any others, do not represent the moving forces of the South. The following paragraph from its article is full of encouragement:

> "The report is abroad that the South is all on fire for free-silver repudiation. The truth is, among the intelligent business classes—among those who have no political aspirations or inclination—the man on fire for free silver can scarcely be found. No; the man on fire for free silver—if he is well informed—is apt to be on fire with a consuming desire for an office. We say this with due regard and consideration for that large class of editors and other people who have struggled to acquiesce for the sake of regularity, and who have at last nearly convinced themselves that perhaps it will be best to accept this rather than to fly to other evils."

The Galveston *News*, another important Southern journal, welcomes the Atlanta resolutions, which, in the opinion of its editors, "show that banking as a science must be founded in America as in other commercial nations upon the same fundamental principles, which have no reference to the rise or fall of political parties."

The significance of these comments resides in the fact that it is not impossible to detach the Democratic party of the South from the free-silver issue and bring it back to its ancient moorings, in which case it would have the fairest prospects of success in the next Presidential election. When the party planted itself on the bastard issue of "16 to 1," it threw away the States of New York, New Jersey, Connecticut, and Maryland in order to grasp the votes of the trans-Missouri States. Perhaps New York would have been lost in 1896 in either event, seeing that the panic of 1893 and the subsequent hard times had taken place during a Democratic administration. But the situation is considerably altered now. The prevailing ideas of the panic and hard times of Mr. Cleveland's term of office have changed. The fact that those troubles had their origin in the Harrison administration, and merely took effect, like a dose of slow poison, in the succeeding term, is now pretty well understood and appreciated. Add to this the unpopularity and brazenness of the Dingley tariff and its predestined failure to produce the required revenue, and we have abundant reason to predict that New York and the other Eastern States would go back to the Democratic column if the Democratic party should go back to its old platform. But if we are to have free coinage at 16 to 1 for the leading issue in 1900, those States will be just as impervious to Bryanism as they were last year. The congressional elections of next year may show a Democratic majority, because sober-minded people will take some risks in an off year, and the opponents of Dingleyism will indulge themselves in the privilege of giving it a blow when the consequences will not be fatal. But no such risk will be taken in the presence of a mortal struggle. The majority against Bryan or any Bryanite will be just as great in these States in the next Presidential election as it was in the last one.

How will it be in other parts of the country? The improved condition of business in the West, due to good crops and high prices of grain, points to a loss rather than a gain of votes for the free-coinage party in those States which are not immediately interested in silver mining. It is not probable that the Democratic-Populist combination could carry Kansas again. It is fair to say that Nebraska and the two Dakotas are debatable ground. What about the South? There are no silver mines in that section. There is no solid and reasoned belief in free silver as a factor of national prosperity. As the Macon *Telegraph* says, there is only a belief that the issue of 16 to 1 is the road to the offices. Let this idea be once dispelled, and the return of the Democratic party to its true principles is only a question of time. Among the influences looking to such a return we regard the action of the Atlanta bankers' convention as highly important, since it points the way to a real monetary reform, and one which can be defended on scientific grounds. The issue of banknotes against the assets of the banks, under adequate public supervision, puts the currency question in a new aspect to the great majority of voters, and turns their attention away from the hollow and specious fallacy of free coinage. It does not excite needless prejudice, but harmonizes with the best traditions of Southern banking.

"IMPERIALISM."

If Mr. Pearson, the author of 'National Life and Character,' were alive, he would be somewhat surprised by the fate which is overtaking the yellow race, which he feared might one day overrun the Western World. China is apparently destined to undergo, not the fate of Africa, for it is thickly peopled by a highly civilized race, but the fate of British India. There is apparently no opening for colonization in China more than in India. There is probably no place in that vast empire in which Europeans could live and make money without enslaving the natives, and this will never be attempted—not that the sentiment in favor of making colored men work by force is dead among our capitalists, but that democracy, being largely made up of free labor, abhors it. Its revival under a slightly disguised form has been attempted by the British gold miners in Africa, but it has raised such a storm about their ears at home that it is hardly likely to continue very long.

What is tempting in China to the Powers which are apparently making preparations to dismember it, is first the trade, and secondly the "imperial idea," which was started in England and has now spread all over the world. It was at first known as "Jingoism," when it issued from the fertile brain of Disraeli, but it has been gradually getting rid of this somewhat vulgar appellation, and, as "Imperialism," has become another name for a wide extent of territory, inhabited by divers races, speaking various languages, and kept in order by an immense apparatus of forts, native armies, and fleets. Since the abolition of the East India Company and the annexation of India directly to the British crown, and the assumption of the title of "Empress" by the Queen, the incessant proclamation of the extent of British territory, and of the glories of dominion over many lands and breeds of men, has at last stirred other imaginations than those of Englishmen. The idea has run through Europe, and has even made its way to America, that if a nation is to be great it must, like Rome, be "imperial"; that is, must reign over a large number of communities of one sort or other as "war lord," and do them good, and elevate them, not in their own way, but in yours.

There was some excuse for this in the case of nations like Great Britain and Germany, which had large populations pressing on the limits of subsistence at home, and therefore in real need of "fresh woods and pastures new"; but the idea has laid hold of countries like France, which has not a man to spare, and like the United States, which will not be able to people its own soil in a century. Even among us men began to say four or five years ago: "'Sdeath, sir! We have no Malta, no Gibraltar, not an island to our name, nor a single conquered race of a brown complexion, and look at England! These things are the signs of full growth in a nation, and we have now reached our majority. We must have islands and dagoes."

In Europe, all the first half of this

century was occupied in internal quarrels or attempts to maintain absolute government. These have ended in the formation of Germany and Italy and the establishment of a republic in France. Consequently, the feeling of equality with England has burst forth with a renewed vigor, and the English celebrations, like the Jubilee, have stimulated it. There never was anything seen in the world like the procession in London of last summer except the "triumph" of a Roman general, so many were the races represented at it which had succumbed to the power of the British arms and adopted British civilization. This spectacle was not lost on the Continent, but it produced other things than admiration, namely, emulation. It spread or invigorated the desire to do likewise, to have foreign dominions which would, cost what they might, flatter the national pride, and give new glory to the boast of being a Russian, or a Frenchman, or a German. Poor Italy tried her luck in Abyssinia, but had to retire early from the struggle. Fifteen centuries of priestcraft and tyranny have apparently taken from the Italian character the hard edge necessary for conquest.

Africa has been divided under the somewhat comic term, "spheres of influence," and each Power is occupied, so far amicably, in getting what it can out of its "sphere." There probably reigned a good deal of indecision at Berlin and St. Petersburg what to do next, for German colonists do not go to German colonies—no colonist likes to have a "war lord" after him—when the easy victory of the Japanese over the Chinese turned the attention of all the predatory Powers to China and away from Japan. Japan proved herself in that struggle too hard a nut to crack, but the Chinese ripeness for conquest came out with terrible distinctness. Through her war, it appeared plainly that the ancient empire was simply a survival, and might be made to furnish Indias to half-a-dozen European states. This fact had the more importance from jumping into the eyes of two young emperors, each commanding a million of men and eager for some kind of distinction of the military sort, and bitterly jealous of England. The process of division of the Chinese empire, now begun, will probably go on, perhaps slowly at first, though more rapidly than the English subjugation of India. It took England less than fifty years, from the fall of Tippoo Sahib to the battle of Sobraon, to get full possession of the Indian peninsula, but she had to contend with warrior races who gloried in soldiery. The Germans and Russians will have to deal with a race which looks on a soldier as a good deal of a fool, and their invasion of the Central Flowery Land will be more or less of a promenade. The British are said to be sending a fleet to see what is going on, and would probably just now give a good deal to be rid of the "forward policy," which keeps their best army encamped on the Indian frontier, and arrays all the mountain tribes in hostility to them.

The most serious feature in the future is the possibility of converting the Chinese into soldiers of the first order. Undoubtedly the Power which first gets a Chinese army together, under European discipline and officers, will, as Gordon showed, get hold of a weapon of wonderful power. The patience of Chinese, their temperance, their indifference to death, are materials for military training such as the world has rarely seen, and are probably to-day not to be found in any other population except the Turks. Whatever invader gets hold of this weapon first, will have secured a great advantage over those who come after him.

BURKE ON PARTY.

It would seem to be established by general consent that the hall-mark which a life of eminence has earned should take the form of a two-volume biography. Other monuments, indeed, are sometimes raised, but the authorized 'Life' may be held to satisfy minimum requirements. The formal obsequies are not complete without this epilogue, after which the man and his works are cast into the cauldron of time, to be renewed like Aeson, or to be destroyed like Pelias. A century rolls by, and then, if the departed's fame has stood the test, and especially if he happens to be connected with any cause, faction, or school still living, the orthodox thing is to accord him a centenary celebration. This carries the process of sublimation a step further. The reputation that has stood the ordeal, whether of praise or of negative criticism, exacted by a first centennial is well sped on its way to Walhalla.

Admirers of Burke will scarcely regard as an unmixed evil the failure to "do something" for him last July. To be sure, Gibbon (of whom Sir James Mackintosh said that he might have been cut out of a corner of Burke's mind without his missing it) was recently honored by centenary festivities. Burke, who shunned Westminster Abbey, would probably have declined to be put in the same class with Gibbon for such purposes, and, moreover, the anniversary business is being overdone. Only this leaves room for regret: the Jubilee galas were still under full sail at the moment when the first centenary of the great statesman might have been observed. The Jingo feeling, testified to by Kipling's "Recessional," was rampant, and with it the praises of Disraeli. It is a pity that the tribute should have been paid to the juggler who, having invoked Burke in his first address to the Bucks electors, assumed in his title the name of Burke's country home, without inheriting any considerable measure either of his genius or of his virtues.

The fact is, that during the last hundred years all the doctrinaire politicians of the English world have derived their stock in trade from Burke. They may have opposed his views, but he has given them a point of departure. He set the standard of political thought high, and cast political principles about with lavish hand. We need not claim for him superhuman wisdom or superhuman virtue, to maintain that he showed the possibility of applying large ideas to current public issues. With a truly English conviction he defended growth against revolution, while defending the function of criticism against passive obedience. His views were based on a wide induction. He severed the dearest personal ties to support them. For innumerable reasons he should be conned by the modern student of politics as Thucydides was conned by the Greek orators of the fourth century.

With the knowledge that Burke was a strong party man, and with the fresh recollection that Party is now appealed to in pretty much the same way that Liberty was during the French Revolution, we become interested in the attempt to extract from his writings and experience something of present application; if not an oracle, at least a suggestion. The *locus classicus* on party government appears at the end of "Thoughts on the Causes of the Present Discontents." Supplementing the dogmas here enunciated by Burke's own action in 1790, we get a little food for reflection. The question of how far his fear of the King's Friends was justified by the circumstances of the case, is immaterial. His main remedies were the frank recognition of party, close touch between members and their constituents, and a restriction of the Commons to its proper sphere. The root proposition from which the argument proceeds is that almost all measures depend on "some great, *leading, general principles in government*" (Burke italicizes the words himself), and that, therefore, individuals will group themselves in defence of these principles. If a man has convictions, he will seek to carry them out, and in politics the normal way is by a combination. He will not be acting servilely if he votes with his party nine times out of ten; only in every tenth case will a measure be disconnected from the ruling principles which are acknowledged by all members of the party. Burke accepts the charge that parties strive eagerly for power. They should do so, he replies, "that they may carry their common plans into execution with all the power and authority of the state." Place-hunting is even a heavier count than lust of power. Burke faces this also and avows that

political allies, "without a proscription of others, are bound to give to their own party the preference in all things." Turning to history, he finds that *idem sentire de republica* is among the noblest grounds of human association. One of England's most fortunate periods was that part of Queen Anne's reign when the Whig junto held sway. Sunderland, Godolphin, Somers, and Marlborough did not heed either taunts or slanders, but, linked, in Addison's phrase, by "long-tried faith, and friendship's holy ties," they devoted their joint powers to the service of the state.

Thus far Burke expresses ideas which might conceivably sit with grace upon a philosophic spoilsman. Our account of his arguments might lend color to Goldsmith's famous thrust that he "gave up to party what was meant for mankind." We have, however, kept some essential points in the background. Burke was contending with corruptionists, and wished to let the fresh ozone of public sentiment blow through a chamber which, long closed tight, had become tainted by the mephitic exhalations of clique and cabal. He had no fear of combinations that stand in the open and fight fairly. His partisans were "to pursue every *just* method." They were to form "a *fair* connexion." He would have shrunk from creating a close corporation like the fourteenth-century Parte Guelfa, at Florence. Lord Bute and his followers were, roughly speaking, that already. Burke recommends criticism, discussion, debate. His ideal scheme of party tactics finds historical expression in the campaign conducted by the Anti-Corn-Law League. He put false shame under his feet, and claimed that his party would be known by its inherent qualities. "Such a generous contention for power, on such manly and honorable maxims, will easily be distinguished from the mean and interested struggle for place and emolument."

The ultra-party man of any age speaks of the ties which bind him to his organization as though they were of more importance than the cardinal virtues. One gets little support for this attitude from Burke. He urges that in becoming patriots we are not to forget that we are gentlemen, and the honor of a gentleman would certainly require that, after his views became profoundly modified, he should change his party affiliations. We know how much it cost Burke to break with Fox, when the French Revolution presented a new set of political problems and conditions. His Whiggism, instead of proving to be a negation of all principle, was founded on broad convictions of public duty. He was able to carry many of his old associates with him, but in the narrow sense he deserted his party to form other combinations. In 1770 he said we must "model our principles to our duties and our situation." In 1790 he speaks of himself as one "who wishes to preserve consistency, but who would preserve consistency by varying his means to secure the unity of his end; and, when the equipoise of the vessel in which he sails may be endangered by overloading it upon one side, is desirous of carrying the small weight of his reasons to that which may preserve its equipoise."

The political bond which Burke advocates implies principles, character, and honor. We need hardly enter upon a detailed contrast between party, thus conceived, and the modern machine which has become a fetish.

BACCHYLIDES.

LONDON, December 8, 1897.

To-day is a red-letter day, not only in the calendar of Dryasdust, but in the rubrics of all who care for the best Greek poetry—of all who care for poetry, I might say, if a recent French critic is right in attributing our modern dearth of good literature to the recent neglect, in schools and colleges, of Greek letters. Bacchylides of Ceos is the great poet of the hour, though he lived and died twenty-four-odd centuries ago. For a thousand years his works were studied and preserved, then they disappeared—all, saving a few stray lines scattered in quotations here and there, and carefully garnered by Bergk, who has gathered in upwards of 100 lines. Of Bergk's sixty-nine quotations and allusions to Bacchylides, only fourteen repeat or refer to passages in the British Museum papyrus. It does not, then, contain all his poems, though presumably it has preserved his best. Six complete odes, the major part of eight more, and fractions of six others—such is the roster of Mr. Kenyon's 'Poems of Bacchylides,' published to-day.* The six complete odes contain 448 lines, only seventeen lines less than Pindar's Isthmians; the eight odes of which an average of two-thirds is resuscitated, contain 416 construable lines, while six of Pindar's eight Nemeans (iv. and viii. being excluded) contain 418 lines. These figures will, however, lead to an exaggeration of the amount of Bacchylides's resuscitated poetry, unless we bear in mind that the British Museum manuscript (one of the younger papyrus rolls, since it was written about the year 50 B. C.) resembles old-fashioned editions of Pindar in cutting the single lines very short. In addition to his year-long work upon the text, Mr. Kenyon has given an admirable introduction of 50-odd pages, provides serviceable preliminaries to each of the twenty items in his edition, and supplements his critical notes on the constitution of the text with a brief and practical commentary especially noticeable for its genial outlook upon literature at large. A reproduction of the uncial papyrus manuscript, letter by letter, fills the *verso* of each leaf, while the *recto* is occupied by a reconstructed text of the ordinary kind. Unplaced fragments of the papyrus come in at the end, where they are followed by Bergk's fragments. Finally, the work is crowned with an invaluable index of all words used by Bacchylides. The result is that we have for the first time in the annals of scholarship an *editio princeps* so complete in all essentials that it can be put into the hands of school-boys (between whom and the Egyptian grave near Luxor which hid these treasures for nearly 2,000 years our editor stands, with the goodly company of his helpers) as an epitome of modern scholarship.

Nothing is clearer than the close affinity between Sophocles and Bacchylides. This is frequently pointed out in Mr. Kenyon's commentary, and strikes the reader's mind at every turning of the page. Indeed, we may lay hands upon the epigram, and phrase it: "Easier to construe than Pindar, and more like Sophocles." We must remember, though, that Bacchylides was the elder, and that Sophocles was like him, not he like Sophocles. Moreover, Bacchylides has some things in common with Euripides; he is easier to construe than Sophocles. His metres, too, where they have been clearly made out, have the singing quality of Euripides at his best, or even the magical charm of Aristophanes. Any youth, whether at school or at college, who extracts pleasure from the metres of Horace, must feel the metrical charm of Bacchylides's sixth Epinician ode—two stanzas of eight lines, commemorating an Olympian foot-race won by the poet's compatriot, Lachon of Ceos, and beginning:

Λάχων Διὸς μεγίστου
λάχε φέρτατον ποδέσσι
κῦδος . . . . .

Those teachers of Greek who have at heart more than the technical uses of their study, and would do their part toward the much-called-for revival of a living literature in days deserted of the Muse, must welcome the coming of "the Ceian nightingale," Bacchylides.

"Gold-frontleted Urania's glorious minion,
To burst the barriers of his heart he longs,
And flood great Hiero with liquid songs;
So the swift eagle ploughs with tawny pinion
Blue deeps aloft; a messenger of Zeus,
Wide-ruling warder of the thunder's crash,
Him in his wanton strength shall nought abash.
Let shriller birds, with twitterings profuse,
Cower and hide; no peaks has earth that rise
So high, nor billows has the restless deep
So wild that they shall hem his wing, whose sweep
Ranges the wilds of Chaos. Through the skies,
Balanced on delicate plumes, of men far-seen,
He rides the streaming zephyrs of the air."

No greater boon could have been granted to the intending reader of Pindar's Epinician odes than the four Epinicians (ii. v., vi., and xi.), in the longest of which the above passage occurs. It forms the companion-piece to Pindar's first Olympian, and celebrates the self-same race, won by Hiero's horse, "Victor." No one capable of finding high poetical merit in any ode celebrating any victory can deny that this ode of Bacchylides is fine, and yet it is not difficult in comparison with the lyrics of Pindar or with any one of the three great Greek tragedians. In fact, this ode and its three fellows might be likened to that book, dear to the young, called 'Reading without Tears,' and in moments of childlike expansiveness we might call Bacchylides our Pindar without Groans.

No respectable critic, least of all our editor, would claim for Bacchylides the supreme rank of a Pindar, and yet it is demonstrable that this Ceian bard (Simonides, be it remembered, was a brother of Bacchylides's mother) was more at home than his Bœotian rival on the sea. Pindar travelled habitually on land, and hence, in the opening of the second Isthmian, he lauds "these bards

* 'The Poems of Bacchylides,' edited from a papyrus in the British Museum by Frederick G. Kenyon. Printed by order of the Trustees of the British Museum. Oxford: University Press; New York: Henry Frowde.

of ancient days" who "went their tuneful ways riding in the chariot of the Muses." Bacchylides, on the other hand, could not leave his native Ceos without taking ship. What beginning, then, was more natural for him than that of his twelfth Epinician? "Clio, queen of song, now, if ever before, stand like a good man and true at the helm of my heart, hold me thou to my straight course." When Bacchylides catches sight of the eagle it is from afar, standing on the Ceian shore, or sailing the Ægean, but Pindar sees the bird of Zeus as a landsman might, at close quarters; he watches while the power of song prevails and lulls the bird to sleep. Perhaps the landsman Pindar has his advantage here, but he "gives himself away" toward the end of his second Isthmian ode, where he rashly says of the winner Xenocrates, "Nor did the prosperous wind that blew around his hospitable board ever make him reef his sail, but summertide saw him faring toward Phasis, and in the winter-time he voyaged to the regions of the Nile." Only an egregious land-lubber—God save the mark!—could think of transforming a friend's festal board into a seaworthy craft, rig him out with a sail, and gayly pack him off from Girgenti to Egypt and the Euxine. It is hard, indeed, to imagine that Pindar, when he wrote this Sicilian Isthmian, had "found his sea-legs." As for Bacchylides, he had no others, and they would probably have prevented him from writing anything so uncomfortably amphibious as the lines in Pindar's famous fourth Pythian, where we read: "'Tis nought for men of nought to shake a city down, but hard the task indeed to root it where it stands, except the pilot of its rulers be a God."

Bacchylides is truly happy then, and all himself, when about him and beneath are levels of ocean incorruptible, with stainless airs above. "The depths of air suffer no stain," he exclaims in his third Epinician.* "The waters of the sea decay not, but man that has reached hoary age, may not win back the bloom of youth. Yet virtue hath a radiance which faileth not with the mortal frame, but is nourished by the Muse." Indeed, there is not in all literature a lyric more saturated with the magic of the sea than the greatest of all the known poems of Bacchylides—his "Pæan," numbered xvii. in this collection. The poet and his song transport and keep us by enchantment always far remote from sight or thought of land. Not a word is breathed that can break the spell of ocean that holds us fast, for the name of Cretan Ida serves but to remind us of the leagues of water through which Minos is driving home the dark-prowed ship, and the opening words snatch us into the middle of the Cretan sea:

"The dark-prowed ship, freighted with Theseus bold
And bright Ionia's children seven twice-told,
Was ploughing onward through the Cretan sea.
Far-shimmering appeared its radiant sail,
Strained in the North Wind's favorable gale.
Such was the Ægis-warring queen's decree,
Glorious Athena willed it so to be."

It appears that Bacchylides was for some time an exile from his native Ceos, and sojourned in the Peloponnesus, but he never lost the sense of the broad Ægean, which was with him everywhere. We have seen him at Olympia, and marked the eagle traversing his song, not as he might be seen from the holy Altis-ground, but as he appeared to Bacchylides at home in "wave-encompassed Ceos"—so Pindar calls it. Even King Hiero's winning horse "Victor" changes to a ship before Bacchylides has done with him, "onward-darting, safe he holds the helmsman on his back."

If we carry with us these preoccupations of our Ceian poet, and linger over the rhythms of his first Epinician Ode—a song of Ceos triumphing at the Isthmian festival of the lord of the ocean, Poseidon—we shall find there the surgings of quiet summer waves that die along the Ceian shore. One strophe, two antistrophes, and two epodes are all that has been recovered of this charming song, but the tides of the Ægean ebb and flow around us as we read. We are lapped, as if by the caressing and liquid swirl of a summer surf, in the cross-movements of these strophes and epodes. Two waves seem to contend through the first five lines, and to be half combined in the hampered stream of three lines at the close. The same two liquid movements strive again in the epode, the last line of which echoes their final union in a lengthened sweep that breaks upon the shore.

Perhaps, though, Bacchylides himself describes it best in his Pæan of Theseus, the High Seas' Song of Songs, whose beginning we have already quoted, where he tells us what Theseus saw in the deeps of the sea:

"Anon he reached the hall
Where Gods hold festival,
Beheld good Nereus's far-famed daughters there,
And shuddered at the sight.
Their glimmering limbs shone white,
While darting rays fire-bright
Flashed forth upon him. Round about their hair
Were glittering fillets rolled,—
Circlets of braided gold,—
The while they took their merriment,
Dancing with liquid feet their hearts' content."

The merriment of Nereids, dancing with liquid feet in the halls of Poseidon—such is the spectacle granted for our rejuvenation in the newly recovered works of Bacchylides, a poet whom the Muse found always dwelling on the open sea. LOUIS DYER.

* Mr. Kenyon's translation, given in his note on page 28.

CHAMPOLLION.

PARIS, December 13, 1897.

The name of Champollion, the man who, by a sort of intuition, discovered at the beginning of this century the lost secret of Egyptian hieroglyphic writing, is world-famous. We owe to him all our positive knowledge of the oldest dynasties of Egypt. No Frenchman having any culture can cross the Place de la Concorde without seeing its charming obelisk, which is almost a monument to Champollion.

M. de la Brière has just published, under the title 'Champollion Inconnu,' a small volume which will be found interesting by all who admire the work of the great Egyptologist. "Chance would have it," says M. de la Brière, "that, at the foot of the Alps of Dauphiny, a patrimonial house which came by marriage into the Champollion family, a house which had once belonged to Condillac and to Mably, situated in the village of Vif, near Grenoble, contained in its old archives, intact and inedited, letters of the illustrious Egyptologist." These letters were written by Jean François Champollion, who was still a child, to his eldest brother, Jacques Joseph, who represented for him the absent family. The Champollions hailed from Champoléon, on the River Drac, between Gap and Grenoble. Their family gave several officers to the army. We find in 1786 a Marquis of Champollion figuring with the Saint-Valliers, the Saint-Ferréols, the Chabrillants, Des Adrets, Du Bouchage, among the gentlemen of the Duke d'Orléans, Governor of Dauphiny. There was a Capt. Champollion at Jemmapes as officer of ordnance to the Duke de Chartres (the future King of France).

Jean François was born in 1790. His father was poor and held a post at Figeac. The Revolution closed all the old provincial colleges. The child was confided first to a poor monk of the Abbey of Figeac, whom the Champollion family had adopted after the abbey had been secularized. His eldest brother, Jacques Joseph, had left Figeac and established himself at Grenoble, where his great knowledge and his researches had already distinguished him. Desirous of helping his parents, and struck by the great intelligence of his younger brother, he sent for him and took entire charge of him at Grenoble. He always remained his guide, his mentor—in his Egyptological studies as well as in everything. They were called afterwards by everybody Champollion *l'aîné* and Champollion *le jeune*. Young Champollion obtained a *bourse* at the Lyceum of Grenoble at the age of thirteen. The lyceums had been organized only a little while before, and had become, as they still are now, official establishments. The programme of the lyceums organized by Napoleon was set forth to the rector of Grenoble in a letter from Fontanes, the grand-master of the University:

"I beg of you, M. le Recteur, to recommend the chiefs of all your establishments to give frequently, as subjects of composition, in prose as well as in verse, the principal facts in the history of France, and chiefly those which will make for ever memorable the reign under which we live. The innumerable exploits of the army under the orders of his Majesty the Emperor and his generals, the high wisdom of his laws, his administrative works, the embellishments of his cities, the public monuments which he has founded, the protection which he has given to science, to art, to industry, the vast influence of his genius on the fate of France and of Europe, the affection which we owe to his person, and the happiness which his dynasty promises to us, are an inexhaustible source of subjects which the pupils of French schools cannot touch without the liveliest interest."

Young Champollion was in constant correspondence with his elder brother. He wrote to him short notes, which have all been preserved. "The paper of the time is thick, solid; it differs in size and texture from our light modern papers. There were no envelopes; the name of the person to whom the letter was addressed was written on one side of the paper. The date is often wanting." Young Champollion was a very precocious child, and shows in his letters an inexhaustible curiosity; and, singularly enough, this curiosity, which is the most characteristic trait of his genius, is applied to the most arduous and difficult subjects. On some points he seems to have been almost blind: he never could get on in mathematics; he was drawn only towards the study of Oriental languages; he never showed the least taste for military life. The Lyceum received one day this appeal:

"It is the intention of his Majesty the Emperor that a presentation should be made to him of 150 young men, graduates of the lyceums. First appointed sergeants, they will receive, on arriving at their place of destination, brevets of sub-lieutenants. You

will address to me, M. le Recteur, as soon as possible, your presentation lists."

Champollion was not tempted by this offer; and afterwards, in 1811, when he became subject to the conscription, he found himself exempted from military service by a special decree of the Emperor made in the interest of the Oriental languages.

The letters given by M. de la Brière introduce to us the most minute details of life in a *lycée* under the First Empire. They show us the most singular mixture of military and monastic discipline; the school has corporals, and all the Latin expressions formerly used in the establishments kept by priests are carefully preserved—"præmium doctrinæ, accessit," etc. The old classic programmes were maintained; Champollion added to them the study of Hebrew, of Arabic, of local and provincial idioms. He astonished his masters more than his comrades, and attracted the attention even of the Administration. The *Journal de l'Isère* writes as follows after a visit from the Prefect to the Lyceum:

"Several pupils, in their hours of leisure, have given themselves up to studies which are no part of the teaching of the Lyceum. It is thus that we have in a public examination young J. F. Champollion, national pupil (*élève national*), explaining part of a chapter of Genesis in a Hebrew text, after having answered some questions on the Oriental languages in general. The Prefect, who crowned the best pupils, expressed his great satisfaction."

Champollion was a devourer of books; he studied everything.

"Send me the Gradus [the 'Gradus ad Parnassum' was still used a few years ago, before the fashion of writing Latin verses had been abandoned], Livy, Dioscorides. . . . Send me Anacreon in the Languedoc idiom. . . . I am reading Laharpe. . . . I send you back Condillac. . . . If you can, send me Duchoul 'Sur la Religion des Romains.' . . . Send me, I beg you, the 'Mythologie des Peuples du Nord.' . . . Send me the 'Synonymes français.' . . . I thank you for Mably; I have read the 'Entretiens de Phocion.' It seems to me that what the Abbé Mably says in his preface—that he has extracted and translated this work from a certain Greek manuscript in the library of the Convent of Mont-Cassin—ought to be judged like his preface to the 'Voyage d'Anténor en Grèce.' What do you think of it? Do you believe that it is a real translation from the Greek, that it is really antique, that it is a work of Phocion's? Plutarch does not speak of it in his life of the great man. I have great doubts. . . . Send me a book. I don't know what to do after I have performed my Latin exercises and studied Hebrew, Syriac, and Chaldean."

It was evidently at the instigation of his elder brother that Champollion tried to make himself a linguist, and learned the Oriental languages; but what is really astonishing is that he learned them without a master. He had a real passion for the East. "If I write a Latin exercise, it is only to avoid the penalty; I have long lost my taste for it. The Oriental languages are my favorite passion . . . Greek, Hebrew and its dialects, Arabic—these are what I burn to learn well." His brother held out to him a hope of getting him a place in the special school of the Oriental languages in Paris. He gave him, at a distance, some elements of philology. The Jansenists of Port-Royal made what they called the 'Garden of Greek Roots' and the 'Garden of Latin Roots.' These books were valuable; they were written in verse, the better to help young minds to enter into the analysis of languages. Young Champollion very early took pleasure in this analysis. He writes, for instance, to his brother:

"I have read in the 'Mécanisme des Langues' the controversy of MM. Falconet and Frenel on the signification of the word Dunum. The former maintains that Dunum signifies a high place, which seems rather suitable for *Uxellodunum*, the present Capdenac, for you know that it is on a high hill. M. Frenel says that it means an inhabited place. To clear up the point, I have searched among the Hebrew roots, and found that Dome means city. Compare Medina, an Arab city, and Dinas in Bas-Breton means city. In Greek, I find that Diné means a hollow."

Egypt early appealed to his imagination.

"I wish to make a profound and continuous study of this ancient nation. The enthusiasm which the description of its enormous monuments has excited in me, the admiration which I have felt for its power and its knowledge, will increase with the new notions I am going to acquire. Of all the peoples I prefer, I confess that none can balance the Egyptians in my heart."

He learns everything that concerns Egypt: "I have no buttons for my pantaloons. Send me 'Ludolphi Ethiopica Grammatica.'" He does not yet know the language of the Pharaohs, and is only making approaches; he feels instinctively that he has something to learn from all the invaders of Egypt—from the Greeks, the Arabs, the Hebrews, who were at one time enemies, at another allies. He delights in the Bible in the original Hebrew, in the rudiments of Arabic, in the Koran. His Hebrew Bible has been preserved; the volume is much worn, the pages covered with additions and corrections, with manuscript notes.

The correspondence of which I have given a brief account ends in 1807; in that year young Champollion left Grenoble for Paris. There he worked in the great public libraries, pursuing his philological studies, mixing with the men who had accompanied Napoleon to Egypt. The intercourse with his brother becomes also more complete. Young Champollion was now preparing himself with more advantages for the discovery of that marvellous key which he afterwards gave to science, and which revealed to the world the hidden sense of the hieroglyphs, the secret of the obelisks, the temples, the pyramids, and the tombs of the valley of the Nile.

The archives of Vif, in the Department of the Isère, preserve, besides the letters written by Champollion at school, those which he wrote during his life as a student in Paris. M. de la Brière gives us only short extracts from these highly interesting letters. At the age of nineteen, Champollion was appointed professor of history at Grenoble; he went back to Paris at the age of thirty; he was only thirty-two years old when he read, on the 17th of September, 1822, before the Academy of Inscriptions, the account of his discovery of the key to the hieroglyphs, a discovery which will make his name for ever famous.

Correspondence.

PROPOSED SYLVESTER MEMORIAL.

To the Editor of The Nation:

Sir: May I be permitted to appeal through your columns to all friends and admirers of the late Professor J. J. Sylvester to assist in founding a suitable memorial in honor of his name and for the encouragement of mathematical science? A movement was inaugurated on this side of the Atlantic soon after his death, and it was resolved by the promoters that a fund should be raised for the purpose of establishing a Sylvester Medal, to be awarded at certain intervals for mathematical research to any worker irrespective of nationality. For the purpose of carrying out the scheme, a strongly representative international committee has been formed, and I should like to take advantage of this opportunity of expressing the great satisfaction which it has given to the promoters to be enabled to include in this committee so many great and distinguished names from the American universities. In every case our invitation to join the committee has been most cordially responded to, and the consent has in many instances been accompanied by expressions of the greatest sympathy and encouragement. The list, as it stands, practically includes the leading mathematicians of the whole world.

It has been estimated that a capital sum of $5,000 will be sufficient for the proposed endowment, and of this about one-half has already been subscribed here. In appealing to the American public to enable us to complete the desired sum, I am in the first place prompted by the consideration that Sylvester's association with the Johns Hopkins University, and the leading part which he took in advancing mathematical science in America, render his claim to estimation on the part of the citizens of your country quite a special one. It is but a modest endowment that we are asking for, and I am sure that all those who were personally acquainted with him, and who realize the great influence which he exerted in raising the intellectual level of every institution with which he was associated, will be glad of this opportunity of coöperating in the movement.

It is proposed that the fund, when complete, shall be transferred to the Council of the Royal Society of London, that body having undertaken to accept the trust and to award the medal triennially to mathematicians of all countries.

I can hardly venture to trespass upon your courtesy to the extent of asking you to print the complete list of our committee, but for your own information I beg to send a copy herewith. It will be sufficient to state that it comprises the names of President Gilman of Johns Hopkins University, of Professor Simon Newcomb of Washington, of Professor Willard Gibbs of Yale, of Professor Peirce of Harvard, and many other well-known American men of science. Subscriptions may be sent to and will be acknowledged by Dr. Cyrus Adler, the Smithsonian Institution, Washington, or by Dr. George Bruce Halsted, President of the Academy of Science, No. 2407 Guadalupe Street, Austin, Texas.—I am, sir,

Yours obediently,

Raphael Meldola,

Professor in the Finsbury Technical College, London, England, Hon. Organizing Secretary to the Sylvester Memorial.

December, 1897.

SOUTH CAROLINA PRECEDENTS FOR NEW JERSEY.

To the Editor of The Nation:

Sir: In your issue of December 16 you notice the complication which will arise in New Jersey in regard to the seat of the President of the Senate, who will succeed to the office of Governor upon the resignation of Mr. Griggs to accept the position of Attor-

ney-General of the United States, and to assist in the solution of which, you say, there is no local precedent. It happens that the same question, under somewhat similar circumstances, has been several times met and acted upon in South Carolina, an account of which may not be uninteresting nor without value in the decision of the case in New Jersey.

The subject is an old, a very old, one in South Carolina. The question arose in the very inception of the colony, more than two hundred years ago. Under the instructions of Gov. Sayle, the first Governor, he was given a Council of Deputies. These were the Deputies of the respective Proprietors, who were to sit as an Upper House, or Senate, and, with twenty persons elected by the "freemen," to constitute a Parliament. Gov. Sayle was authorized by his commission, with the advice and approbation of his Council, to nominate a Deputy to succeed him in case he should die or depart from the province. The Governor was a very old man, and, his health failing under the fatigue and exposure of the new settlement, on March 4, 1671, he sent for his Council, and, with their approbation, nominated Joseph West as his successor. Only five Deputies had been appointed, and one of these had not come out. Another had been suspended by the Governor and the other Deputies, leaving but three, including West, who had been nominated to succeed Sayle. It happened that, upon the death of Sayle, Sir John Yeamans claimed the government as a Landgrave under the famous Fundamental Constitution of Locke, and in doing so he made the precise question now under consideration. He insisted that as, under the instructions, it required *three* Deputies to constitute a quorum, if West became Governor there could be no quorum of Deputies, since by accepting the office he would cease to be a Deputy; that he could not be both a Deputy and Governor. Therefore, he argued, he could not be Governor, and *ipso facto* dissolve the government. But the point, however ingenious, was disregarded.

The question was again involved in a controversy in 1700 when Joseph Blake, a Deputy, was exercising the office of Governor, being chosen by the Council to fill a vacancy until the pleasure of the Lords Proprietors could be known. In this instance, Governor Blake, appearing upon a committee of conference between the upper and lower house as a Deputy, resented the absence of official respect to him as Governor. But the committee of the Commons declined to be overawed by the official dignity as Governor while he was meeting them as a member of the Council.

In 1725, Sir Francis Nicholson, the provisional Royal Governor, upon the overthrow of the Proprietary Government, leaving the province, and there being, as yet, no Lieutenant-Governor, the administration devolved upon the President of the Council, who continued to conduct it as such until the appointment of the first regular Royal Governor, Robert Johnson. In this case it is interesting to observe that Arthur Middleton, the President of the Council, was not styled Governor, as has been erroneously assumed, but was addressed as *President and Commander-in-chief*, and exercised the office in that name. So, again, upon the death of Governor Robert Johnson in 1735, Lieutenant-Governor Broughton succeeded to the administration, and upon his death in 1737 (no Governor having yet been appointed) William Bull succeeded to the administration as *President of the Council*.

I can recall no other instance in which the President of the Council or Senate was called upon to act until within the last twenty years, when the precise case now under consideration in New Jersey occurred in South Carolina. Upon the meeting of the General Assembly after Governor Wade Hampton's second election as Governor, he was immediately elected to the United States Senate, and thereupon, under the Constitution of the State, Lieutenant-Governor W. D. Simpson succeeded to the administration of the office. In 1879 it happened he was elected Chief Justice, and then, under the Constitution and act in pursuance of that instrument, the administration devolved upon the Hon. Thomas B. Jeter, Senator from Union County, who was then President *pro tempore* of the Senate—the Lieutenant-Governor under the Constitution being the President of the Senate. Mr. Jeter, upon assuming the duties, assumed also the title of Governor, and as such administered the office for some months, when the Hon. Johnson Hagood, having been elected Governor, qualified.

And now the question arose as to Mr. Jeter's right to retain his seat in the Senate as Senator from Union. Curiously enough, repeating the position taken by Sir John Yeamans two hundred and ten years before, it was held that Mr. Jeter could not have been Governor and Senator at the same time, and as he had been Governor, it was said, he was not Senator, although the term for which he had been elected, four years (1878-1882), had not expired. The question was raised in the Senate and referred to the judiciary committee, which returned two reports, a majority and a minority report. The majority report found that Mr. Jeter's seat became vacant upon his assuming the position of Governor; the minority report maintained the contrary. The question was debated on December 7, 1880, when the majority report was laid upon the table, the minority report adopted, and Mr. Jeter served out the remainder of the term for which he had been elected (see Senate Journal 1880, 147).

I was a member of the Legislature at the time, and was much interested in the question. The mistake, as I conceived, was in the assumption of the title of Governor by Mr. Jeter. He never was Governor. The Constitution had provided that the General Assembly should by law provide for the case of removal, death, resignation, or inability of both the Governor and Lieutenant-Governor, declaring what officer should then *act as Governor*. In pursuance of this provision, the General Assembly had provided by act (1868) that in such case the President of the Senate *pro tempore* "shall exercise the office of Governor." Under these constitutional provisions, it will be observed, Mr. Jeter was not Governor: he was an officer—the President of the Senate—*acting* "*as Governor*," *exercising* "*the office of Governor*." He should have followed the early precedents and styled himself *President of the Senate*, acting as Governor, etc. Had this course been followed, the question as to his seat in the Senate would not have arisen.

An illustration familiar to all old soldiers of the late war is applicable. The colonel of a brigade who assumed command in the absence of the brigadier-general did not thereby become a brigadier, but was merely the Colonel commanding the Brigade. Or, in like cases, the brigadier-general became the Brigadier commanding the Division, but not a Major-General, etc.

Very respectfully, EDWARD MCGRADY.

CHARLESTON, S. C., December 24, 1897.

"AN ALLEGED SPECIE CIRCULAR OF 1827."

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* for December 9 appears an interesting communication from Mr. William MacDonald, under the above caption. Mr. MacDonald takes as his text the assertion of Prof. Sumner and of Mr. Schouler that a circular similar to the noted specie circular of President Jackson "was issued in Adams's administration." He then produces a copy of the instructions referred to, and declares himself incredulous as to their similarity to the specie circular. Mr. MacDonald, in fact, proves his case, but hesitates to assert boldly that the authorities quoted are wrong. The comparison which he institutes between the instructions issued by Secretary Rush and the specie circular establishes conclusively that there exists no such similarity. The difference between them is essential; they are acts of quite opposite meaning. The specie circular had for its purpose the absolute discontinuance of the receipt of banknotes in payment of land dues, while the instructions of Rush had for their purpose the definition of what banknotes might be accepted for land dues; one Secretary instructs the receivers to receive banknotes, and the other instructs them *not* to receive banknotes.

If Mr. MacDonald had looked a little further, he would have found that the instructions of Rush did not stand alone, but were supported by like instructions, both before and after Rush's incumbency of the Treasury. To discover the cause which lay at the bottom of all such instructions, we have to go back to the joint resolution of April 30, 1816, which declared that "from and after the 20th day of February," 1817, no "duties, taxes, debts, or sums of money accruing or becoming payable to the United States . . . ought to be collected or received otherwise than in the legal currency of the United States, or Treasury notes, or notes of the Bank of the United States, or in notes of banks which are payable and paid on demand in the said legal currency of the United States" (iii. Statutes at Large, p. 343). This resolution was intended to aid the Bank of the United States in restoring specie payments, and the policy outlined in it was responsible for the Rush circulars and those of other Secretaries of the Treasury, which were identical in spirit and defined the attitude of the Government towards bank paper until the specie circular was promulgated. The first of these was issued by Secretary Crawford, either in 1817 or early in 1818, as we learn from a communication of that official to the Senate on March 27, 1818. In this communication Crawford uses the following language:

"The collectors and receivers of public money throughout the nation have been instructed to receive in payment of duties, taxes, and public lands nothing but current specie, the bills of the Bank of the United States, its officers, and the State and other local banks employed as offices of deposit, and the bills of such other banks as will be received by them and credited as

specie for the use of the United States. It may be proper to observe that the Bank of the United States and its offices receive as specie the bills of all local banks which pay specie, that are established in the places where that bank and its offices are respectively established" (iii. Folio Finance, p. 265).

A careful examination of the terms here laid down will show that they were quite as restrictive as those insisted upon by Secretary Rush. Crawford issued similar instructions later in the year, this time exclusively to receivers of dues from the public land sales (State Papers v., Finance, p. 62-63), and on August 1, 1820, Crawford issued his last instructions of this character. The circular contained these clauses:

"With a view to increase and equalize the facilities for making payment for public lands in the several land districts of the United States, I have determined to authorize the receivers of public moneys to take, in addition to specie and the bills of the United States Bank and its branches, the notes of the following incorporated banks, viz., those of the cities of Boston, New York, Philadelphia, Baltimore, and the Merchants' and Franklin Banks of Alexandria, and those specie-paying banks in the State in which the land office is situated.

"This instruction supersedes those that have heretofore been given on the subject, except in so far as they prohibit the receipt of any paper of any bank which does not discharge its notes in specie on demand; and that prohibition must, in every case, be rigidly adhered to" (State Papers iv., Finance, p. 264).

It will be seen that this is almost identical with the instructions given by Rush on February 22, 1826. The supplemental circular of August 22, 1827, was more restrictive, and both were meant to discourage as much as possible the receipt of any paper but that of the Bank of the United States, without actually prohibiting such receipt. In addition to these, we have a circular of Secretary Taney of March 26, 1834, which is of the same import, and reads in part as follows:

"It is . . . expected that you will be careful to receive the notes of no bank except such as are in good credit and pay specie promptly for their notes when presented, and you are to receive none except such as the bank in which you deposit will agree to pass to the credit of the United States as cash" (Senate Document 334, 24th Congress, 1st session, p. 7).

This was the last of these circulars until that of July 11, 1836.

Mr. MacDonald thinks it probable that the Rush circulars would have been referred to by the supporters of Jackson's policy as furnishing a precedent for the specie circular, supposing Prof. Sumner's assertion to be correct. He says, however, that the debates "apparently make no mention of a 'similar circular' of 1827," though he admits that his "examination has not been exhaustive." The truth is that Senator Benton, who made the first speech in support of the Administration, based a great part of his argument upon these circulars of Crawford and Rush. A quotation will show this plainly:

"For twenty years, and under three Presidents, all the Secretaries of the Treasury have acted alike. Each has made selections, permitting the notes of some specie-paying banks to be received, and forbidding others. Mr. Crawford did it in numerous instances; and . . . . no human being ever thought of charging him with illegality in this respect. Mr. Rush twice made similar selections, during the administration of Mr. Adams; and no one, either in the same cabinet with him, or out of the cabinet against him, ever complained of it. For twenty years the practice has been uniform; and every citizen of the West knows that that practice was the general, though not universal, exclusion of the Western specie-paying bank paper from the Western land offices" (Thirty Years' View, i., p. 637).

But Senator Benton's argument was not that the circulars were similar in the sense that Rush's were specie circulars. His whole contention was that if, under the resolution of April 30, 1816, the instructions of Secretary Rush were legal, so was the specie circular, since both made discriminations in regard to the nature of the currency to be received in the payment of land dues. This was the only similarity he claimed for them. His argument was at once met by Webster as follows:

"The gentleman argues that the Treasury has made discriminations, but what discriminations? I suppose the whole truth to be simply this, that admitting at all times the right of the party paying to pay in notes of specie-paying banks, the collectors and receivers have not been held bound to receive notes of distant banks of which they know nothing, and could not judge, therefore, whether their notes came within the law" (Works, vol. iv., p. 277).

And he concludes by saying that "he was of the opinion that the specie circular was against the plain words and meaning of the law of 1816, against the whole practice of the Government under that law."

Senator S. L. Southard of New Jersey cherished the same conviction, while Calhoun expressed himself in even more emphatic language, Gales and Seaton quoting him thus: "Mr. Calhoun briefly characterized the Treasury order as unconstitutional, without law, without precedent, without any authority whatever" (Congressional Debates, vol. xiii., p. 375).

These extracts are conclusive as to the similarity of the specie circular of 1836 to anything that preceded it, and Mr. MacDonald is amply justified in casting doubt upon the statement made by Prof. Sumner and by Mr. Schouler. Indeed, he would have been well within bounds had he ventured a positive contradiction. It is interesting to note that the two historians, both authorities of weight, have made the same error. Mr. Schouler's authority would seem at first glance corroborative of Prof. Sumner's correctness. On the contrary, however, it apparently gives reason for doubting Mr. Schouler's own accuracy and his carefulness in making important statements, for it seems evident on examination that he has transferred to his own pages both the assertion and reference from Sumner's 'Jackson,' without verifying the one or the other.

Mr. MacDonald states that he has been unable to discover the circulars of Rush in the Government publications. He will find the printed text of that of February 22, 1826, on page 157, Senate Document 198, Twentieth Congress, first session; and the text of the supplementary circular of August 22, 1827, on page 59 of the same document. They are also reprinted in State Papers v. Public Lands, pp. 519, 520. In both cases they are appended to a report on the transactions of Receiver Thomas A. Smith. It is not surprising, therefore, that Mr. MacDonald did not find them.

RALPH C. H. CATTERALL.

UNIVERSITY OF CHICAGO, December 22, 1897.

"I WOULD LIKE," ETC.

TO THE EDITOR OF THE NATION:

SIR: I live in a part of this country where the correct use of the auxiliaries *shall* and *should*, *will* and *would*, is very much neglected, at least according to old-time standards. Years and years ago I remember reading in the *Nation* that "there still are people who judge of a man's English by his use or misuse of *shall* and *will*, as they judge of his table manners according as he eats with his knife or not." (I quote from memory.) I also remember in the *Nation* a remark attributed, I think, to James Russell Lowell, to whom a lady had written (or said): "I would like to have your autograph." His comment was (in substance): "Well, if she *would* like to have it, why doesn't she go and do it and have done with it?"

Now the centre of light on all matters pertaining to English is supposed to be New England, and Boston in particular; and last October (8th and 9th) there was held in Boston the twelfth annual meeting of the New England Association of Colleges and Preparatory Schools, and I have just been reading in the December number of the *School Review* the report of the proceedings. "Fancy my feelings" when I read on page 648, lines 13-15: "When this good time comes, . . . we will not have so many mental abortions"; and *twice* on p. 681 (lines 7 and 14): "I would like to add a word"; "I would like to contribute." Can it be possible, Mr. Editor, that the general numbness as to these auxiliaries is actually extending towards the Hub? "If the foundations be destroyed," etc.

One other point: Is it correct to say, "Much data"? It must be, for it is in the same *School Review*, middle of p. 668; but it sounds odd to one as ignorant of English as is Yours truly, A. H.

Notes.

In Messrs. Appletons' "Literatures of the World" series, the next volume will be by Edmund Gosse, and will deal with 'Modern English Literature.'

D. C. Heath & Co. have in press 'The Contribution of the Oswego Normal School to Educational Progress in America,' by A. P. Hollis.

Henry Frowde will shortly publish 'The Bible References of John Ruskin,' selected by permission and alphabetically arranged by Mary and Ellen Gibbs.

In T. Fisher Unwin's "Masters of Medicine," Sir James Young Simpson becomes the next subject of biography, by Dr. Laing Gordon, a former pupil of Simpson's. The interest of the work centres in the introduction of anæsthetics.

'Hazell's Annual for 1898' (London: Hazell, Watson & Viney) renews itself with its customary thoroughness. Athletics in general, with cricket, cycling, golf, swimming, tennis, yachting, etc., for 1897 are duly chronicled; so are art, the drama, music, photography, trade; and in the case of British colonies and foreign countries the article on each concludes with a narrative of the principal events of the year. Then there are new biographies, new maps of seats of war and "spheres of influence," obituaries; the Jubilee looms up; statistics of prison

and post-office, of army and navy, movements of the Stock Exchange and of labor, religious conferences, and a host of other topics swell the contents of this most useful book of reference.

A second edition of Mr. W. F. Willcox's 'Divorce Problem' (Columbia University) contains an appendix giving the results of the eleventh census, so far as they bear on conjugal relations. The divorce rate during the twenty years ending in 1886 has somewhat declined in the North Atlantic States, doubled in the South Atlantic States, trebled in the South Central States, increased 54 per cent. in the Western States, 20 per cent. in the North Central States, and 44.5 per cent. in the whole country. The rate per 100,000 married couples was, in 1886, for the United States 250, for the Western States 527, for the North Atlantic States 149, and for the South Atlantic States 106. The tendency to increase seems especially marked in the last decade.

The Century Company has brought out in book form 'Campaigning with Grant,' by Gen. Horace Porter, which has been running in the Magazine as a serial. The illustrations are all full-page, on plate paper, and a number of good portraits have been added to the list of engravings. To the presswork of the De Vinne Press, add an uncommonly tasteful binding, and we have as handsome a specimen of book-making as one often sees. Speaking to the substance of this work, we cannot rate it highly. Not only is it badly diluted, but there is much more of Porter than of Grant in it. It is a companion-piece to Badeau.

Mr. Fred Mather has gained a good reputation as a fish-culturist and as a writer on fish and angling. His 'Men I Have Fished With' (*Forest and Stream* Publishing Co.) is made up of sketches which originally appeared in *Forest and Stream*, and the men it commemorates are perhaps better known to the readers of that journal than to the general public, with the possible exception of the late George Dawson and Col. Charles H. Raymond. While two or three of the stories have enough interest to justify reprinting, the rest of the twenty-odd cannot be recommended as either instructive or amusing.

The author of 'Camp and Trail' (Lothrop) deserves praise for her advocacy of humaneness in hunting, but does not successfully reproduce life in the Maine woods, still less depict its peculiar charm. This failure is not due to absence of long descriptions of scenery or to lack of stirring adventures. It comes from apparent inability to write good English, from ignorance of the vernacular of the guides, and from occasional slips sure to provoke an experienced camper. In a juvenile work, he is willing the youthful heroes should carry out bear, moose, and caribou on the same trip, but he rebels when a skilled woodsman walks through the forest, compass in one hand, axe in the other.

'For Pity's Sake,' by Sarah Nelson Carter (Boston: De Wolfe, Fiske & Co.), is dedicated by the author to her horse, her dog, and her cat, and is meant to inculcate the lesson of mercy towards these and all other animals. The moral of the book, and its numerous anecdotes, are strung on a thread of narrative, the scene being laid at the old Mansion House in Andover, Mass., long the home of the author. Many are the animals whose lives have been made pleasant by her gentle appreciation of their needs and capacities, and many more, it is to be hoped, may be benefited by the touching appeals which she has here presented to the public in their behalf.

'Sunshine and Shadow,' by W. Lincoln Adams, is, as the sub-title indicates, "a book for photographers, amateur and professional." It is published in sumptuous style by the Baker & Taylor Co., New York. Richly and abundantly illustrated, its teaching is effective through the numerous reproductions of well-chosen plates, as through the excellent matter contained in the various articles, all of which have appeared at various times in the pages of the *Photographic Times* or of the *American Annual of Photography*. The book is edited by Mr. Adams, who has made his selections with great skill and taste. Such a work is especially welcome to those who desire to see photography developed along art lines, and not simply along commercial.

In 'Light, Visible and Invisible: Lectures at the Royal Institution,' by Silvanus P. Thompson (Macmillan), the author suggests a new method in geometrical optics which seems to be a step backward, whether viewed theoretically or practically. Bidwell's color-effects of intermittent vision, something about anomalous dispersion, about luminescence, perhaps about Hertz's work, about various kinds of invisible light, and Stottes's theory of the X-rays, are the only matters not familiar to the general reader concerning which this volume will furnish new information. But these things are enough to make it worth reading.

Prof. William S. Hall's 'Calculus' (Van Nostrand Co.) deserves mention as the briefest and simplest of expositions of the indispensable parts of the calculus, wholly in the interest of its applications and not of the theory of functions. Imaginaries are not considered. There are some injudicious omissions, such as linear differential equations with constant coefficients.

Prof. John Perry's 'Calculus for Engineers' (Edward Arnold) may be mentioned on account of its singular plan. It has three chapters. The first is entitled simply "x^n," and treats of such things as velocity, acceleration, energy, thermodynamics, moments of bending, etc. Chapter ii., entitled "e^x and sin x," treats of compound interest, telegraph leakage, Newton's law of cooling, slipping of belts, harmonic functions, imaginaries, forced vibrations, various electrical questions, symbols of operation, struts with lateral loads, etc. Chapter iii., entitled "Academic Exercises," gives Taylor's and Maclaurin's theorems on pp. 317-319, and on p. 322 takes up the solution of differential equations. These, with numerous practical examples (matter for several large volumes), carry us to p. 338, leaving thirty pages for elliptic functions, spherical harmonics, conduction of heat, the gamma function, etc. Such a lightning express through the calculus may very likely serve to give young men a sense of the importance of the subject and a desire to study it more systematically.

The sixth volume of the 'Discours et Opinions de Jules Ferry' comes from the press of Armand Colin & Cie., Paris. The speeches on economic questions are of particular interest even to American readers, perhaps especially to them. They constitute a large and important part of the present volume.

Since Émile de Laveleye's death, his contributions to magazines have been, in part at least, reprinted, and the third volume of these 'Essais et Études' (Paris: Félix Alcan) has reached us. It concludes the series, and contains articles which were originally published between 1883 and 1892. During his last years De Laveleye had access to all the leading reviews of the Continent, England, and the United States. He kept himself very well informed on public questions, and was willing to tackle anything which happened to be prominent for the time being. While we are far from sharing his economic views in their entirety, we are free to express our admiration of his learning, quick-wittedness, and pure moral tone. The editor of these scattered pieces concludes by stating that they will enable one "surtout à faire suivre pas à pas l'évolution de cet esprit élevé, si éminemment chrétien." The evidences of a fine temper are everywhere manifest in De Laveleye's works, and one is bound to take whatever he wrote seriously. The present essays have no further unity than is afforded by the well-known general interests of their author. Indeed, he once or twice gets off his beat of current politics and economics—for instance, when he describes a bear hunt in the Carpathians, and again in a paper on "Hamlet," contributed to the *Revue Bleue*. Written in an engaging style, these papers deserve not only to be saved from the sudden oblivion which overtakes journalistic literature, but to be carefully considered by the student of recent European history.

The twenty-second fascicule of the Hatzfeld 'Dictionnaire Général de la Langue Française' (Paris: Delagrave) carries this excellent work well along in P. Under *pékin*=civilian, the editors give no countenance to any of the proposed derivations, but leave the etymology uncertain.

'Politik: Vorlesungen gehalten an der Universität zu Berlin von Heinrich von Treitschke, herausgegeben von Max Cornicelius,' has just appeared in Leipzig from the press of Hirzel. The book is made up with the aid of the notes left by Treitschke, very fragmentary, to be sure, helped out, however, by several sets of shorthand notes lent to the editor by former students of the master. For those who know how much of his own personality Treitschke put into his lectures, and how often his most interesting words came at the moment, the work of the editor will seem remarkably successful, much more than a carefully restored text. As Herman Grimm says, "It is as if Treitschke himself were speaking to us." The "Politik" was one of his favorite courses, which he regularly gave each winter semester in Berlin, and had given earlier at Freiburg and at Heidelberg. The present volume contains two books, "Das Wesen des Staates" and "Die Socialen Grundlagen des Staates," preceded by a masterly introduction, which gives in a few words a summary of the attitude of previous teachers and the present state of the science. The editor promises that the second and concluding volume will very shortly follow. Not students alone, but every thinking man who gives a thought to the relations of the individual and the state, will find a deep interest in these volumes.

A pamphlet, 'Two Papers on the Oscan Word Anasaket,' by Lionel Horton Smith, contains a reprint from the *Classical Review* and a second paper on the same subject

which is an elaborate defence of the theory advanced in the first, to wit, that the puzzling Oscan *anaSaket* is nothing but the Greek ἀνέθηκε. Notwithstanding the vast amount of erudition which is brought forward to show the possibility of this view, it will doubtless seem to many extremely improbable. The author, who, as appears from the title-page, is now a barrister-at-law, has shown an astonishing productivity in the last two years, as may be seen from the array of titles and press notices printed at the end of the work.

The principal paper in the *Geographical Journal* for December is an account, by Capt. P. M. Sykes, of three extensive journeys in Persia, in which he refers incidentally, but in strong terms, to the benefit conferred by Russia on Central Asia, and Persia in particular, by suppressing the Turkoman terror. The slave-hunting raids of these freebooters, which till recently extended throughout northeastern and central Persia, have now ceased, and they themselves have advanced in civilization through Russian influence. The description of a visit to the oasis of Siwa, in the Libyan desert, famous for its temple of Jupiter Ammon, is interesting but disappointing. Some ancient tombs were seen, but there is no mention of the ruins of the temple, nor of the "Fountain of the Sun," which excited the wonder of Herodotus. The fruit gardens and date-palm forests, however, are still marvels of beauty and luxuriance. Of dates, the principal production of the inhabitants and their currency practically, there are five kinds cultivated, the best of which is too juicy to be exported. The oasis is apparently a stronghold of the fanatical Mohammedan sect of the Senussi, whose hostility to strangers, and especially Europeans, prevented any thorough exploration. Capt. A. W. Stiffe continues his account of the ancient trading centres of the Persian Gulf by a description of Maskat and a sketch of its history. Each of these articles is illustrated and accompanied by maps.

Gold-mining in Pahang, a "Protected State" in the Malay Peninsula, is the principal subject of a paper in the Transactions of the Queensland Branch of the Royal Geographical Society of Australia. The returns are not yet very great, but the three large quartz-mining companies, each with twenty head of stampers at work, are now getting more than enough gold to defray expenses. The ore is, on the whole, of low grade, averaging about half an ounce of gold per ton. Ancient native workings are very numerous in the gold districts. On one hill there were "some hundreds of shafts, some of them 100 feet deep." The miners are said to have been Siamese.

Petermann's Mitteilungen, No. 11, contains the first part of a diary of a recent journey in Syria and southeastern Asia Minor, by R Oberhummer. It is laudatory of the Turkish authorities, but contains numerous references to the oppressed condition of the Christian Greeks and Armenians. In several places they have taken up their abode in almost inaccessible caves the better to defend themselves against the Turks, while the passage of a body of recruits through a village caused all the women and children to hide themselves in the crypt of a monastery. An account of the province of Yakutsk, Siberia, fairly bristles with statistics of every kind, meteorological, ethnographical, commercial, agricultural, and hunting. In 1894, for instance, there were 13,434 professional hunters who killed 218,812 animals, of which 179,242 were squirrels.

A certain interest, though hardly much importance, attaches to the unsettled question of the date of Heine's birth. Hermann Hüffner has only recently (in the *Rundschau*) pleaded in favor of December 13, 1797. But now we learn from another source that the sculptor Hasselriis of Rome is, by agreement with the poet's relatives, working at a monument which is to be unveiled on his grave at Montmartre on December 17, 1899, "the poet's one-hundredth birthday." The proceeds from the sale of a brochure, 'Das Heine-Grab auf dem Montmartre' (Leipzig: Barsdorf), and the interest of a sum exceeding five thousand marks collected at Frankfort, will be applied to keeping the tomb in a worthy state of preservation now and henceforth. According to Hüffner, the musical compositions of Heine's poems, by Schubert, Mendelssohn, Schumann, Brahms, Robert Franz, and others, number more than 3,000. "Du bist wie eine Blume" alone has been set to music 160 times; of other lyrics there are 83 and 76 different compositions, of "Die Lorelei," 37.

About two years ago we called attention to M. Joseph Texte's work on the literary relations between France and England. The same writer contributes to the *Revue des Deux Mondes* for December 1 an article on a similar subject: "L'Influence Allemande dans le Romantisme Français." German literature, it is shown, exerted but little influence on the Romantic movement, but the essay contains much of interest and is entertaining throughout. It forms a valuable supplement to Professor Rossel's volume on the literary relations between France and Germany, which was reviewed in these columns in April last. We notice that both the authors mentioned trace to M. Brunetière the incentive to their literary investigations.

Such a communication as that of Mr. James Gairdner to the *Academy* of December 11 must give Dr. Murray pain. Here is a well-known literary man, "on the subject of the Queen's English," questioning the sense of a perfectly intelligible idiom, *for the time being*. He raises his humble protest "against a phrase which I now find of perpetual recurrence." A glance at the Oxford Dictionary would have shown him that it has been recurring for the past four centuries and a half. "The time being" is, of course, the hour which "now *is*."

For some twenty years past, geologists have been familiar with the plain of the Red River of Minnesota and North Dakota as the floor of an ancient lake, whose outlet ran southward over a slight depression in the uplands, and there cut a deep and broad channel, leading the overflow to the Mississippi, the channel now being occupied only by the water from little side streams whose combined volume forms what we call the Minnesota River. Warren Upham, as a member of the Geological Survey of Minnesota, gave the name of Agassiz to the ancient lake, and has now completed an elaborate account of it, which forms Monograph xxv. of the United States Geological Survey. As is often the case with such problems, their complexity increases with the study given to them. Instead of a single, well-defined shore line, marking a steady level of the lake, there is a remarkable succession of shore lines at low and lower levels, whose planes are not parallel to each other, but diverge northward, as if the land had been rising to the north during the lowering of the lake. A number of the shore planes unite at the southern outlet, but others stand below it, indicating that some other discharge had been discovered. The most remarkable feature in connection with the lake is that its northern border was formed by the retreating margin of the continental ice sheet. It had many fellows in this respect about the basins of the existing Great Lakes, and these will in due time probably yield up histories as marvellous as that here described.

When the Italian Government took away the Pope's temporal power, it retained the Pacca Edict, under which a duty of 20 per cent. ad valorem was collected upon "antiquities" carried out of the Papal Dominions. In a case which has lately been adjudicated by the Court of Appeals at Rome, a decision has been given that the Pacca Edict applies only to such articles as are "precious," or of exceptional value in history or art. This judgment does not advance matters, and it is much to be desired that the Italian Government will see its way to repeal the edict altogether.

—The death of Miss Anna Ticknor last year deprived the "Society to Encourage Studies at Home," familiarly known as "S. H.," of its founder and most zealous worker. It is now twenty-five years since Miss Ticknor, inspired by the success of a similar society in England, organized this association, which aimed at reaching those women who, for various reasons, were debarred from the privilege of regular education. Miss Ticknor wisely recognized that such a society, conducted by correspondence, can achieve little in the way of absolute instruction; and "guidance, criticism, and sympathy" were the watchwords of her modest and genuinely useful efforts. It is refreshing to meet with an educational association that hopes "never to get into the newspapers," and shrinks from the "ill effects of public comment and applause." A quarter of a century ago the need of such a stimulus to home-reading in out-of-the-way districts must have been far greater than in these days of university-extension lectures and numerous facilities for those who ask an agreeable and not too profound acquaintance with learning. It was therefore felt by the friends of the Society that this year its work might fitly end with the publication of the small volume before us. The description of Miss Ticknor's work and its results in 'Society to Encourage Studies at Home' (Riverside Press) will naturally be of interest chiefly to those who have been connected with the Society. The introduction is contributed by Mrs. Louis Agassiz; the book itself is mainly composed of extracts from Miss Ticknor's correspondence with the pupils, who, in 1882, numbered one thousand. No one into whose hands it falls can fail to be impressed with the unselfish devotion of the founder and chief worker in this "silent university," and the genuine success that she achieved.

—The fifty-second volume of the 'Dictionary of National Biography' (Macmillan) extends from Shearman to Smirke, with a good measure of celebrities, including the poet Shelley and his wife Mary, Sheridan, the Siddonses, Algernon and Sir Philip Sidney. The notice of Shelley is encomiastic to the

usual degree of extenuating his behavior to Harriet Westbrook, whose intellectual qualities (offsetting the plea of "incompatibility") are by no means suggested in the account of her, as they are revealed in her letters to Miss Nugent. These letters are mentioned as having "been printed separately," in a limited edition. So far as our knowledge goes, they have never been reprinted since they were first published in the *Nation* (Nos. 1249, 1250). Sir William Siemens and Henry Shrapnel (from whom came the shell bearing his name) find a place here impartially, the one a constructive, the other a destructive inventor. To the equal sky of the Dictionary is also admitted Jack Sheppard, the highwayman, who, it seems, was buried in the old churchyard of St. Martin-in-the-Fields, the present site of the National Gallery. Finally, as Dr. Murray tells of ghost-words that have haunted the dictionaries, we have in the prophetic "Mother Shipton" a mythical personage, who once more forces her way into line, if only to be discredited for ever. In fact, for practical purposes, she remains as real, say, as Timur the Tartar, or that Talleyrand to whom we ascribe all bonmots of uncertain origin. It is curious to observe how little is related (beyond the titles of his numerous linguistic works) of Walker's remodeller, Benjamin Humphrey Smart, whose 'New Critical Pronouncing Dictionary' (1836) was long the standard.

—Literary activity continues at an increasing rate in Japan, and even the outlying portions of the empire, Yezo and Formosa, have their newspapers. Of journals and periodicals started during the year 1894, as the freshly published official statistics show, the number was 518, though during the same time 506 ceased publication. Among the 814 journals and other serials that still presumably hold their own, 720 are published in Hondo, the main island. Among these are some of a very high class, both as to form, literary contents, and pictorial embellishment. The total circulation in 1894 was 367,735,426 copies. The *Asahi Shimbun* or *Morning Sun* newspaper of Osaka, conducted after the French model of *Le Petit Journal*, has the largest circle of readers. Besides capital cartoons (by a woman artist), several columns of chat and criticism, translations of foreign fiction, a *feuillcton*, telegraphic news, and home and foreign correspondence, the owners employ some of the best modern mechanical presses and appliances. Nevertheless, its place of business in this country of earthquakes is, very sensibly, in one of the old-fashioned one-storied but very roomy *yashiki* (spread-out house) of feudal days. This paper circulates in all parts of the empire, which has a population of 45,000,000 souls. In the more serious matters of copyright, Japan's literary activity is even more noticeable. In 1894 the total number of artistic and literary products which came under notice of the Department of Public Instruction was 28,212. Of these, 8,962 were classed as original works, 18,831 as volumes or pictures in a series, 191 were translations, and 228 were reprints. Judged by the number of works issued, the subjects most in favor with authors and the public were law, religion, painting, geography, astronomy, calendars and almanacs, music, engraving, pedagogy, history, agriculture, medicine, poetry, and popular songs. In romance and fiction, what was lost in the small number of books published was made up in the vastly greater relative and actual circulation. Divination still has numerous votaries, and so has "Chinese" poetry, though that constructed in Japanese style is much more voluminous and popular.

—The calendar of the Imperial University of Japan for 1896-'7 (Tokyo: Z. P. Maruya & Co.) is a booklet of 368 pages in all, giving an historical summary, the Imperial ordinances, the general regulation for the colleges of law, medicine, engineering, literature, science, agriculture, roster of students, professors, and graduates, a list of the journals, memoirs, and bulletins written by specialists and published by the University, with a map of the University grounds, which are those of the old daimio of Kaga—both ample and beautiful. The former wooden buildings have given way to edifices of modern architecture and of brick, though some are of iron and concrete. In October, 1896, the grand total of students in all departments was 1,895. Of these, 554 were in the college of law, 276 in medicine, 345 in engineering, 248 in literature, 106 in science, and 219 in agriculture; the others being special students. The actual number of graduates is 2,771, of whom 199 have died. This, considered in connection with the large number of those who have studied in foreign countries and those graduated from other learned institutions in Japan, shows a body of at least 10,000 men in the empire who have been instructed with considerable thoroughness in modern scientific methods

—In comparing the details of the courses with the themes chosen for scientific, literary, and legal theses, we are struck with the fact that the University reflects the general national feeling of the past four years. We note in this calendar a marked reaction from tendencies in full force from about 1873 to about 1893, which bade fair to denationalize Japan and to modify injuriously her spirit of self-protective independence. During this movement (since 1893) there have been some fantastic phases of Chauvinism; but, apart from these, it must be evident to the thoughtful that such a reaction has been on the whole wholesome. In every direction the thoughts of the Japanese are now being applied to interpreting their past history, conserving what is excellent, applying the principles of science to the improvement of the soil, food, habitations, every-day life, and generally to the reconstruction, in the light of science, of their civilization. The list of publications in German and English shows how admirably this work of national regeneration is proceeding. Yet the lover of literature sighs to find, amid the scores of learned publications, agricultural, chemical, medical, engineering, and the like, the one lone monograph on the language, mythology, and nomenclature of Japan, viewed in the light of Aino studies, by Basil Hall Chamberlain. Surely literature is yet to meet with higher honors in Dai Nippon.

STICKNEY'S STATE CONTROL OF TRADE.

State Control of Trade and Commerce by National or State Authority. By Albert Stickney. Baker, Voorhis & Co. 1897.

Mr. Stickney's Introduction gives a good idea of the drift of his book. He calls attention, in the first place, to the fact that recent decisions of our highest legal tribunals, especially the United States Supreme Court and the New York Court of Appeals, hold that a mere combination of common carriers, or of private property-owners, "providing for the fixing of rates and prices for their own property, by one common authority for all," constitutes a crime. These decisions are, he thinks, so hopelessly in conflict with the fundamental principles of the law of property under a modern constitutional government, that great interest attaches at the present time to an examination of the law of the subject. A short review of the history of the English and American law relating to state control of trade and commerce shows that the recent statutes on which these decisions have been based are not novelties; that they are really revivals of old attempts to protect the community against "dangers of the imagination," and that they will in time share the fate of their originals. The early statutory attempts in England took various forms. Some acts regulated prices of labor and merchandise; others, as to trade and commerce of specific kinds, were entirely prohibitory—*e.g.*, statutes prohibiting the export of gold and silver, of grain, of wool, of tools and machinery, and forbidding the departure of artificers from the kingdom to work in foreign countries. One class of acts was aimed at attempts to raise prices by "engrossing," or buying and holding in quantity with a view to subsequent sales at an advance. These statutes, had they been enforced, would have abolished the occupation of wholesale merchant and middleman, and would have compelled every producer to be his own salesman. Trade and commerce as they exist to supply the needs of any modern community could never have come into existence. In connection with these statutes there existed others, against conspiracies or combinations to raise prices of both labor and merchandise; they were part of the same general scheme of state control.

In time, all these attempts to control prices and labor were abandoned. Even in the early reports there is very little evidence of attempts on the part of the authorities to enforce them, and gradually they became obsolete. At length they were repealed altogether, and to-day in England "the law is well established that the ownership of property, of all kinds, comprises not only the right of free use (always subject to the proviso that its use is to be in such a manner as not to interfere with the rights of others), but also the right of free sale, at the will of the owner, whether the property be labor or merchandise, and whether the owner's will be exercised separately or in combination with other individuals."

In this country, with some early exceptions, there was, until recent times, virtually no attempt on the part of the Government to interfere with freedom of contract in private employment. The present widespread alarm over "Trusts" and "monopolies" recalls the vague primitive dread of oppression through an excessive raising of prices, and this although, as a matter of fact, owing to the railroad and telegraph and their effect in making the markets of the whole world one, all danger from any attempt to enhance prices has been for ever removed. This alarm has produced the new legislative craze for interfering with freedom of contract. Our anti-Trust and anti-monopoly statutes consequently represent

a revival, at the end of the nineteenth century, of statutes which reflect the ideas prevalent in England in the time of Edward III.

This view of the subject, it will be seen, confines the attention to private property. Mr. Stickney insists upon the validity of the distinction between private property and employments and a class of property and employments of a public nature. Control of these, both as to the use of the property and as to the prices to be obtained for such use, he deems essential. This distinction separates from ordinary private property all companies exercising a public franchise, such as railroads, telephone, and telegraph companies, gas and electric-light companies, ferry companies. It is substantially the distinction laid down by the Supreme Court of the United States, that the Legislature must control all property "affected with a public interest."

We must say that, in our view, this distinction, notwithstanding the vast array of authority by which it can be supported, is unsound. To mention only a single reason: there is not, in nature or in use, any line between the two kinds of private property. If the attempt is made to find it in the fact that some property consists in franchises directly derived from the state, the difficulty is that, in modern times, every species of property takes on a corporate form. The business of selling books or clothes may be carried on by a corporation with a franchise resembling at many essential points that of a railroad. If the line is supposed to divide property which meets a public want from other species of property, we can only say that every species of property the value of which arises from use must meet a public want to yield the owner a return. Transportation is not any more a public necessity than a roof over one's head; yet the same courts which set their faces sternly against a railroad's right to fix its own rates, concede without hesitation the right of the owner of a house to ask what rent for it he pleases. We should, in fact, be inclined to go much further than Mr. Stickney—to obliterate this distinction, and maintain that the freedom from state control which the owner of property ought to enjoy in a rational system is absolute within the field of all reasonable contracts; that the state ought to interfere only in cases of clearly proved extortion and oppression; and that then the interference should be for the occasion only. The theory that the state can interfere whenever it can be shown that property is "affected with a public interest" would necessarily, it seems to us, end in a general regulation of all prices.

Nor do we find the distinction in Mr. Stickney's historical review of the development of the English law. In the *Mogul* steamship case, decided in 1892, in which the whole matter was thoroughly canvassed, it was held that a combination of carriers to keep up rates of transportation and suppress competition was legal. This was a case of public, not private employment, if there be any such distinction. We do not find any evidence in this book that the English Government makes any attempt to regulate transportation rates in general.

It seems to us, on the contrary, that it is an erroneous distinction introduced by our own courts in the last twenty-five years, in order to find a *locus standi* for populistic legislation, and that it has broken down in its application. In proof of this we should cite the leading American case cited by Mr. Stickney to show the nature of the distinction, viz., Munn vs. Illinois. In that case the Supreme Court of the United States upheld the right of the State of Illinois to fix by statute grain-elevator rates, "it being the conceded fact that the elevators were private property." In order to make this case illustrate the law of "public employment," Mr. Stickney is forced to insist that the elevators had "become virtually part of the public highways."

In Mr. Stickney's view the distinction in question was successfully maintained by the courts down to a few years since, and the main thesis of his book is to demonstrate that the recent decision of the New York Court of Appeals in People vs. Sheldon, and the judgment of the Supreme Court at Washington in the Trans-Missouri case, were at war with all hitherto recognized legal principles. For the acute argument by which he reaches this conclusion we must refer the reader to the book. The sum of the matter is that, after 600 years, the highest tribunal of the country has laid it down that a mere contract to fix rates or prices, which interferes with nobody and injures no one, is a crime because the Legislature has called it one; thus reintroducing in the high-noon of our boasted civilization one of the most barbarous delusions of our uninstructed ancestors. Mr. Stickney seems to think this a sudden plunge; we, on the contrary, think it but the last result of a process which began with decisions of twenty-five years since; if not counteracted, it must certainly end in making the judiciary a subservient tool of the Legislature and in destroying every vestige of common right.

Mr. Stickney's standing at the bar is such as to make his discussion of the main question authoritative. Especially in the present state of confusion on the subject of legislative interference with private right is such a contribution to discussion as this welcome. It is literally true that the Supreme Court, by a majority of one, has just decided that Congress may make the most innocent act a crime, and the question now is whether this position is to become a permanent part of our system. No one can examine Mr. Stickney's book without perceiving the magnitude of the interests at stake. We have no room for quotation; but we may call the reader's attention especially to the economical statements on which his legal theory is based and which strike us as masterly. They are really an essential part of the legal reasoning.

THE LIBERATION OF FRANCE.

M. Thiers: Le Comte de Saint-Vallier: Le Général de Manteuffel. Libération du Territoire. 1871-1873. Documents Inédits. Par Henri Doniol, Membre de l'Institut. Paris: Armand Colin & Cie. 1897.

Among the woes of France in 1871 the obligation of cash payment was not the worst. The loss of territory was much more keenly felt than the loss of the milliards, and article viii. of the Peace of Frankfort probably inflicted, for the time at least, the deepest wound of all. To have soldiers of one's own race forcibly quartered upon one has long been accounted a hardship by the nations of the Continent, as it was by the English in 1628. Thiers had much to suffer in the course of his negotiations, but nothing could have grieved him more than to admit German claims of garrison till the last payment—that is, till March 1, 1875. One need not enumerate the inconveniences of such an arrangement to the French, apart from its insult to the national pride. On the economic side they were enormous and of wide application. Thiers has sometimes been charged with wastefulness in anticipating his payments, but even a Bonapartist editor like Cassagnac could hardly withhold from him his highest title, "Liberator of the Territory."

M. Henri Doniol, in the very important monograph before us, confines his attention to a chain of political intercourse which began with the signing of peace and extended to the evacuation of France at Conflans-et-Jarny more than two years later. Public attention has usually been fastened upon the financial side of the indemnity question—upon what one may call its Pouyer-Quertier aspect. M. Doniol does not profess to throw fresh light on the expedients devised for procuring the money. With the aid of a full correspondence carried on by several of the leading personages concerned, he investigates the relations of the Provisional Government and the German Empire in so far as they deal with anticipation of payment and reduction of the period of occupation. Under his treatment the negotiations assume almost the color of personal contract. The number of determining individual factors is brought down to a minimum. M. Doniol rarely finds it necessary to go outside a little *parti carré:* on the one side Thiers and the Comte de Saint-Vallier; on the other, Bismarck and Gen. Manteuffel.

Of these the interest attaching to the officer last named is by far the most notable. With respect to Bismarck, M. Doniol's sources of information are probably those of all the world. The energy, suavity, and jauntiness of Thiers are somewhat accentuated by his new documents. But not till this moment has the extent of the service rendered to their own countries and to the cause of European peace by Saint-Vallier and Manteuffel been fully recognized. Saint-Vallier's long and creditable diplomatic career is on record, but the extent of his physical disabilities has never been appreciated, nor the discouragements which beset his path during the term of his residence at Compiègne and Nancy. Manteuffel is remembered for his part in the war—perhaps best remembered for his prompt action in the southeast, when Bourbaki's army was forced into Switzerland. The Emperor's warm friendship designated him, in spite of Bismarck's coolness, to the command of the army of occupation, in which position he contributed materially to smoothing the way for a return to the amenities of normal intercourse. He seems never to have forgotten that France was a sister nation in distress. For complete absence of rancor, for sedulous avoidance of the causes of friction, for tender consideration, even, he deserves honorable mention among the worthies of modern warfare. One might easily forget that he was a soldier and put him down as a philanthropist. He lived through much abuse from the German press in those days of mænadic boasting. Secure in the esteem of his master, he lent himself to the task of hastening the evacuation, thereby assuaging the lot of the vanquished while he secured his country's acknowledged due. Respect for Thiers, belief in the sta-

bility of the republic and in its honesty, and sympathy for the French character, inclined him towards friendliness of action. He was equally frank in character and utterance.

A citation from one of many letters to Thiers will show in what spirit the German conceived his task. The following words were written at Compiègne in July, 1871, at a moment when some friction had arisen concerning the payment of the first half-milliard. Manteuffel, after helping to render an explanation easy, thus disclaimed having merited any special thanks:

"Votre Excellence est trop bonne. Qu'ai-je donc fait? Rien que mon devoir. Quelle était la situation? Mon roi m'a donné le commandement de son armée en France. Moi, j'ai dans ma jeunesse étudié l'histoire de la France; j'ai de même beaucoup lu M. Thiers; je connais le caractère français. Donc, après avoir fait la connaissance de Votre Excellence et de plusieurs membres de son ministère, j'ai gagné la conviction que ce caractère est représenté dans le gouvernement actuel de la France, et je me suis rendu vis-à-vis de mon gouvernement garant de la loyauté française. J'ai écrit que le payement des quatre premiers demi-milliards serait accéléré de manière qu'en peu de mois le chiffre des troupes allemandes en France serait réduit au nombre de 50,000 hommes stipulé dans la paix. . . . Tout à coup arrivent des difficultés de vérification matérielle du payement du premier demi-milliard; mais Votre Excellence écrit que la somme est payée! Aurais-je agi dans l'esprit de notre convention verbale basée sur de la loyauté mutuelle, si j'avais gardé pour moi cette déclaration du Chef du Pouvoir Exécutif? Je devais en faire part à mon souverain. Je le fais, et Sa Majesté Impériale peut prouver devant l'Europe qu'elle . . . a confiance dans chaque mot écrit de Votre Excellence."

One is not surprised that a French historian is ready to do justice by such a German.

In the autumn of the same year the Pouyer-Quertier convention was signed at Berlin, and the release of six departments was among its first effects. Manteuffel gave up his command for a short time to take a holiday at Gastein, leaving Gen. Stosch in his place. Headquarters were shifted from Compiègne to Nancy, where an incident soon occurred which showed of what material consequence to the French was the individuality of the commander-in-chief. Stosch began by quarrelling with the intendant, Blondeau, over some questions arising from the maintenance of the troops. Personal relations between the two were broken off, and Stosch permitted one of his colonels to eject the Mayor of Nancy with wife and family from his own house till some blankets for his câserne had been provided. Manteuffel returned at the end of October to find St.-Vallier engaged in an attempt to secure redress for the damage and indignity inflicted. Stosch was immovable in his contention against Blondeau, and when Manteuffel sought to heal the breach, his second appealed the case direct to Bismarck, with a view to rendering the commander in France subject to the Chancellor and even to the officials of the Chancellor's department, such as Arnim.

This incident illustrates one class of irritations to which Manteuffel was subject. Another and more trying source of discomfort to him was the lack of reserve shown by French Ministers and the French press at critical junctures when he was doing his best for the Versailles Government. A striking instance of his admirable temper is afforded by the manner in which he tolerated a blazing indiscretion of Pouyer-Quertier. The evacuation of the forts on the right bank of the Seine was under negotiation. Matters were moving well. Manteuffel had communicated to St.-Vallier, under seal of secrecy, intelligence of the most vital character. It was to be conveyed to Thiers, but St.-Vallier was responsible for safeguarding it from the public ear. Through Pouyer-Quertier, however, it leaked out and found its way to the *Soir* before the end of twenty-four hours. For a moment Manteuffel was intensely exasperated, compromised as he was in the eyes of Berlin by an undoubted *faux pas*. Then he recovered his composure, and could find it in his heart to sympathize with St.-Vallier, whose peace of mind had been destroyed by connection with an apparent breach of faith:

"Monsieur le Chef du Pouvoir Exécutif, la situation est trop tendue pour l'aggraver encore par des susceptibilités personnelles. Je prie Votre Excellence d'être convaincu que vu ces circonstances je serai, tant qu'il le sera possible, plus conciliant que jamais dans tout ce qui regarde l'armée d'occupation. Je ne m'en fais pas de mérite, c'est en même temps l'intérêt de mon pays qui me dicte cette conduite. Je finis ma lettre en adressant la prière à Votre Excellence de ne pas s'occuper de ces articles du *Soir*, et de dire au comte de Saint-Vallier, s'il vous en écrit, qu'il possède toujours et malgré cette publication mon estime et toute ma confiance."

The moral value of a friend like Manteuffel was hardly second to the practical value. The Provisional Government was overjoyed to find some one in high quarters who thoroughly trusted it. Confidence was generally felt in the ability of France to pay her indebtedness; the crux of the situation was her willingness. The Parisian newspapers were far too ready to soothe the broken pride of their readers with such rhetoric as: "We will pay the first two milliards in cash, the balance with the mitrailleuse." On the other hand, the German press in 1871 was full of distrustful murmurings. The sight and touch of the milliards in the end soothed it, but so long as there was a chance to remain sceptical concerning the performance of French undertakings, it wrested every untoward circumstance or rumor the wrong way. Alternate volleys of journalistic diatribe, however, were of slight moment after Bismarck abandoned all idea of a Bonapartist restoration. His growing conviction that Thiers could and would redeem the Versailles pledges smoothed the way for a reconciliation between him and Manteuffel. The Chancellor's change of disposition was soon confirmed by Arnim's intrigues, and in September, 1872, Manteuffel, after spending night upon night with him at Gastein, could announce confidentially to his French friends that unless the political situation in France materially changed (a glance at Gambetta), evacuation would be hastened even more rapidly than could be gathered from the treaty of June 20.

While the personal friction between Bismarck and Manteuffel lessened rapidly after a harmony of political opinion had been reached, both found themselves annoyed by the proceedings of the German Ambassador at Paris. The full extent of Arnim's negotiations with the Imperialists was revealed to the public, including Thiers, only when they had ceased to have any bearing on the liberation of the territory. We are not here concerned with his personal character, his ambitions, or his downfall. It is enough that he was at the other pole from Manteuffel in public policy, and was by the leverage of his office in a position to undo much of what was being effected at Nancy by daily intercourse between the General and Saint-Vallier. Delay and misrepresentation were his two principal weapons against the Provisional Government. M. Doniol has little new intelligence to offer concerning his relations with Bismarck. They were amply disclosed at the trial and have often been the subject of discussion since. But one is interested to note how soon he fell under suspicion at Nancy, and how Manteuffel's attitude towards France was confirmed by his conviction that, were Arnim left to himself, the honorable conclusion of a solemn agreement would be thwarted by the trickery of a wirepuller. Having failed in his intrigues, Arnim was yet anxious to set his name to the final treaty of 1873. When Bismarck snubbed him by arranging everything with Thiers through Gontaut, and by himself signing the papers in Berlin instead of permitting Arnim to sign them in Paris, there must have been much quiet satisfaction at Nancy. Exactly one month after the question of Verdun or Belfort had been settled, Manteuffel gave a birthday banquet in honor of Thiers. Bismarck's telegram of congratulation was a seal of approval upon what the commanding officer had done for the cause of national reconciliation in the face of Arnim's secret enmity and the blatherskite of German editors.

M. Doniol makes a long catalogue of the annoyances, grave and petty, that had to be mastered in the course of negotiations. We shall add only one obstacle to those we have already cited. Gambetta was a bugbear at Berlin, and the fear that he might supplant Thiers was countenanced by numerous debates in the Assembly. The German military party used it constantly as an argument, and it was of more real moment than ordinary political or stock-exchange forensics. All through 1872 the danger arising from his harangues took that prominent place in diplomatic correspondence which had been occupied in the previous year by questions relating to the stated payments. Public speeches of Thiers against "la campagne oratoire à laquelle se livrait le tribun" strengthened Manteuffel's dispatches to Berlin, and a few months showed that Gambetta was out of the Presidential race. Of greater weight than assurances was the prompt discharge of the indebtedness. So long as the money was forthcoming at proper intervals, it was obvious that the nation was not convinced, though it might be tickled, by Chauvinist eloquence.

We could wish that M. Doniol had vouchsafed a bibliographical note concerning his sources. He has been empowered to use very valuable material, and his temper, though not judicial, is tolerably fair. We feel bound to call prominent attention to the merits of his style. Were he less prone to talk about what "le juge futur" will think of the Franco-German war, we should say that he had observed all the canons of good literary taste and expression.

The War of Greek Independence, 1821-1833. By W. Alison Phillips, late Scholar of Merton College, Senior Scholar of St. John's College, Oxford. Charles Scribner's Sons. 1897.

That the Greeks should have succeeded in securing their independence, and in being recognized as a new European state, seems

more surprising than ever, in the light of recent events. The Concert of Europe of 1897 is a very good counterpart of the Holy Alliance of 1822. The appearance of an impartial, adequate, and readable account of what the Greeks call the struggle of their regeneration is therefore timely. Mr. Phillips has drawn from the best sources, Mendelssohn-Bartholdy, Finlay, Gordon, and Prokesch-Osten, and writes with the fresh interest which recent events in Greece have contributed to inspire and increase. He might have mentioned Tricoupis's 'History of the Greek Revolution,' a classic of the modern Greek language, and Pouqueville's first-hand 'Histoire de la Régénération de la Grèce.' But the compilation gives abundant evidence that the author has digested his material, and he has presented it in an attractive form. We are made to realize that the rebellion of the Greeks succeeded because the Greeks were unalterably determined not to live longer under Turkish rule. This determination did not imply that, at the time of the outbreak, their condition was worse than it had been in previous periods. On the contrary, it was better. The Greeks were not very badly treated, in Greece. They lived a fairly comfortable life. But the very relaxing of the severity of oppression hastened the rebellion.

The interest which attaches to the Greek Revolution is in no wise temporary. It was a remarkable struggle, and there was a wonderful variety in the characters of the persons who were prominent in it. There may be mentioned the Phanariotes, Ypsilanti and Mavrocordatos; the Corfiote, Capodistrias, who resigned the position of Minister of Foreign Affairs at St. Petersburg to accept the presidency of the Greek State, and to die by assassination while attempting to organize a government. Next we may name Ali Pasha, the infamous tyrant of Yanina, and Colettes, Ali's physician, subsequently, for a brief time, at the head of the provisional government. Another graduate from Ali Pasha's school was Karaiskakis, transformed from a wild, treacherous brigand to a great national leader. The two commanding figures of the Peloponnesus were Kolokotronis and Mavromichalis. Marco Botzaris was the hero of Missolonghi. From the islands, we mention one name only, but that of the noblest character whom modern Greece has produced — Admiral Miaulis. Lord Byron may fitly close the list, for his sacrifices and, finally, his death at Missolonghi had immense influence in strengthening the philhellenic sentiment in Europe which finally compelled the recognition of the Greek kingdom.

The struggle also abounded in incidents of dramatic interest. We will not dwell upon the hideous massacres of Tripolitza, where Greeks slaughtered 2,000 captives, or of Scio, where Turks butchered 27,000 Christians. Besides such horrors, there were the novel campaigns with fire-ships, under the intrepid Canaris, by which the Greeks fairly scared the Turks out of the Archipelago. Repeatedly, too, in the course of the war, Greeks, when hope of defence was gone, fired a pistol into the powder magazine and overwhelmed besiegers and besieged in the explosion. To this war belongs, too, the siege of Missolonghi, which will always be cited as an example of a heroism fully Spartan. Mr. Phillips points out that there was little to choose, in respect to barbarity, between the Turks and the Greeks. Signal instances of bravery on the part of Greeks, or of dogged endurance on the part of Turks, abound. Rarely was ability in handling troops shown on either side. The Greeks seldom preoccupied a pass, and the Turks rarely followed up an advantage which they had gained. The ablest continuous land operation was Ibrahim Pasha's invasion and reconquest of the Morea, in 1824. The diplomacy of each of the four great Powers steadily opposed the aspirations of the Greeks. But, in France and in England, a strengthening popular opinion helped the Greeks, and finally it was Russia which, from selfish policy, took the step which led to the recognition of Greek independence. In his glance at recent history, Mr. Phillips is inclined to believe that Lord Salisbury's diplomacy had kindly designs for the Greeks, if they had been willing to accept the autonomy of Crete, instead of demanding the union of the island with Greece. Greece might well have been content with what would have come to her in the working out of Salisbury's larger plans.

It is impossible to lay down such a book as this without asking the question, whether Greece has still a future, or whether her significance, as an independent state, is ended. The present condition of Greece, however pitiable, is incomparably better than that of the country sixty years ago, when the monarchy was established. Then the land was almost a desert, the people were a half-million famished peasants, with only the slightest varnish of civilization. Now, in addition to an increase of population of at least three-fold, the Greeks have the organization and institutions of a civilized state, and, though their national career has been full of disappointment to those who have expected too much of them, their worst faults have always been the same: vanity, impatience, lack of thoroughness, and aversion to steady toil. If it were possible that the recent disaster could lead them to devote their attention to an honest and efficient management of their own affairs, Greece would still have her day of influence in the Orient.

The Romance of the Irish Stage; with Pictures of the Irish Capital in the Eighteenth Century. By J. Fitzgerald Molloy. Dodd, Mead & Co. 1897.

Mr. Molloy was not very happy in his selection of a title, for, in spite of occasional brilliant episodes, there is little that is romantic in the generally calamitous and often humiliating story that he has to tell, while the main part of his theatrical history is devoted necessarily to the fortunes of the old Smock Alley, Aungier Street, and Crow Street Theatres of Dublin. Nor has he been able to unearth any new material of importance in his researches in this restricted field. He furnishes a consecutive and, doubtless, accurate record of the disastrous rivalry which brought one manager after another to ruin, and of the extraordinary expedients which were employed to attract the public to the playhouses; yet tells practically nothing that has not been told over and over again in the various theatrical biographies, while, in general outline, his narrative corresponds very closely with the history of the English stage during the same period.

Beyond doubt Ireland contributed an extraordinary number of brilliant stars to the dramatic constellations of the eighteenth century. Few names have brighter lustre than those of Peg Woffington, Charles Macklin, Tom Sheridan, Henry Mossop, Spranger Barry, whose voice in tragic passages was described as "harmony in an uproar," Dorothy Jordan, Richard Daly, and the beautiful Miss Bellamy, all of whom won some of their greatest triumphs among their enthusiastic compatriots, and all of whom, of course, figure prominently in Mr. Fitzgerald's pages. He writes of them in a vivacious and agreeable manner, but does not present them in any new light, and makes no attempt to speculate upon their respective excellences. His work is anecdotal, not critical, and, notwithstanding its array of dates and financial statistics, can be commended only as a collection of entertaining gossip. Of sober reflection it is entirely destitute, but it is sprinkled plentifully with characteristic and humorous stories, most of them venerable, if all good of their kind, which afford a lively picture of the social conditions then prevailing.

By far the greater part of these two volumes is occupied with illustrations of the so-called gayety and luxury of the ante-Union period. Those were the days of high play and hard drinking in England as well as in Ireland, and Dublin lived well up to the fashion. Mr. Fitzgerald dilates upon the recklessness, extravagance, and improvidence of all classes of society without any apparent appreciation of the melancholy significance of it all. Certainly, life then was not without excitement, but it is just as tolerable, even if it be rather duller, to-day, when bestial drunkenness with mock religious accompaniments is no longer regarded as jocose, and duelling is recognized as a savage absurdity. Mr. Fitzgerald seems to imagine, although he does not say so specifically, that the excesses of which he speaks were peculiar to Ireland, but as a matter of fact, it is almost needless to say, they were epidemic throughout the British Isles. It is probably true, however, that the Dublin theatres suffered more than the English from the license of the time. Being dependent upon a smaller and more impulsive community and the viceregal patent, they were compelled to truckle to every variety of social, religious, and political prejudice, and existed only on terms of great artistic degradation, even when their performances were most brilliant; being, in the most bitter sense, the servants of the King as well as of the public. It was no uncommon thing for a manager to be forced to make a public apology under penalty of having his theatre pulled about his ears. There are few more disgraceful episodes in theatrical history than the treatment accorded to poor Tom Sheridan, in connection with his production of the luckless "Mahomet."

Of this incident, as of many others, Mr. Fitzgerald gives a full and interesting account. He is a little diffuse and inconsequent, but he is never tedious, and his book will beguile an idle hour very pleasantly. For purposes of study and reference, however, it is useless, having no index.

Nineteenth-Century Questions. By James Freeman Clarke. Houghton, Mifflin & Co. 1897.

Dr. Clarke selected the papers in this volume for publication shortly before his death, and in the main they justify his approbation. They are in three sets, and they increase in interest from the first, "Literary

Studies," to the last, "Historical and Biographical." The midway set is "Religious and Philosophical." Of the literary studies the most important is "Did Shakspere Write Bacon's Works?" It turns the tables in an effective manner, showing that the greater was likelier to include the less than the less to include the greater. The religious and philosophical articles are polemical, and already "Why I am not a Free-Religionist" would sound strangely in a Unitarian conference, though Dr. Clarke was accounted a radical among Unitarians forty years ago.

The historical and biographical papers are particularly interesting as touching things in which Dr. Clarke had a personal acquaintance and a deep and vital interest. Thus, he writes of Carlyle as one of the first of those who felt the stress of his early inspiration, and as one of those who were most grieved by his decline and fall. He does not, however, sufficiently indicate the extent to which the germs of Carlyle's later brutalities existed in his earlier and earliest work. He is singularly inappreciative of that humanity in Voltaire which was so lacking in Carlyle. To Harriet Martineau is measured praise and blame in about equal parts. A fearful catalogue is made of her assaults on various people in her 'Autobiography.' He thinks she was needlessly afraid of being mobbed, especially in Louisville, Ky., where "it was easier at that time to speak against slavery than in Boston." This testimony of Dr. Clarke is that of a resident of Louisville, where he had his first parish. He also brings his personal knowledge to bear upon some of Mrs. Chapman's additions to Miss Martineau's book, and he "points with pride" to the "Protest against American Slavery," no mealy-mouthed affair, which he wrote and 173 Unitarian ministers signed when there were not more than 250 all told. But far the most interesting and valuable paper is his review of Wilson's 'Rise and Fall of the Slave Power,' which is less a review than a short history from his own point of view, and we could hardly have a better. The account of the early abolition meetings is at once critical and sympathetic. It is "important if true" that "Mr. Garrison always maintained that his converts were most likely to be made among those whose consciences had been educated by the Church and the Bible." Dr. Clarke's psychology of Southern bitterness is not that of Dr. Leonard W. Bacon, ascribing it to Nat. Turner's insurrection, nor that of Dr. Lyman Abbott, who fathers it on the abolitionists, but this, that the pro-slavery Southerner was subconsciously in the wrong; for nothing ever makes a man more bitter than to go counter to the deepest motions of his private heart.

The Conception of God. By Josiah Royce, Joseph Le Conte, G. H. Howison, and Sidney Edward Mezes. The Macmillan Co. 1897. 8vo, pp. xxxviii, 354.

On some day in 1895 Professor Royce delivered an address before the Philosophical Union at the University of California, which occupies fifty pages of this volume. This address was devoted to a restatement and simplification of the argument for the existence of a God given in Professor Royce's earlier book 'The Religious Aspect of Philosophy.' The argument substantially is, that the mere existence of experience shows that something exists, no matter how incoherent that experience may be. That experience, with whatever its existence involves, has a whole; and therefore there is an all-embracing being, which is all-knowing. Then, following out this line of reflection, the other attributes of Deity are regarded as deducible from omniscience. Of course, the other disputants, Professors Le Conte, Howison, and Mezes, were familiar with this argument in the earlier form in which its author had broached it. Following Professor Royce, Professor Mezes presented certain objections, which, as printed here, occupy a dozen pages. He substantially admits Prof. Royce's metaphysics, but is unable to see that the existence of a good God is thereby proved. Prof. Le Conte followed, and, in remarks of about the same length, urged, in very simple eloquence, the existence of a soul of the world, as harmonizing with our knowledge of nature and with the theory of evolution. The debate was closed by an attack upon the argument by Professor Howison, of equal length with the address that set it forth, from the standpoint of a Berkeleyan idealism. Prof. Howison, however, does not explicitly state his own theory. It appears that there were subsequent private discussions among the disputants, which had the excellent result of inducing Prof. Royce to write a supplementary essay that fills considerably more than half the volume, which is thus two-thirds of his writing. An introduction of thirty-eight pages, by Professor Howison, resumes the course of the disputation, and informs us that it resulted, in accordance with the time-honored custom of debate, whether philosophical or political, in all parties retaining their original opinions. The Supplementary Essay treats chiefly of the principle of individuation, and this, even more than the other parts of the book, is of decided value as a line of reasoning concerning logical and logico-metaphysical matters.

For few men will the book have any practical religious importance. In the eyes of the majority of modern logicians, religious metaphysics for the most part falls into two logical sins, which are far worse than fallacies. In the first place, it violates that logical rule which may be said to supersede all others with an imperial sway; namely, owing to the power of genuine scientific reasoning to correct itself—that is, to correct its own previous conclusions by the admission of additional evidence, to correct its very premises, as it constantly does in the most exact sciences, and even to correct its own fallacies, of which there are many historical examples—and owing to the fact that this scientific procedure is nothing but the self-development of man's original impulse of curiosity or interest, it may be said that the only one thing absolutely indispensable to the discovery of truth is the perfect sincerity and earnestness of the endeavor to get one's errors corrected and be set right. But the religious philosophers are not striving to get set right, but to defend a foregone conclusion, and, as history shows, by their mutual conflicts they attain only the imposing persuasions for which they strive, and not the truth for which they do not strive. It has been as often remarked that the religious metaphysicians usually commit another logical fault, that of totally misunderstanding the nature of necessary reasoning. Metaphysics has always been an ape of geometry. But nowadays geometers no longer regard the postulates of geometry as axioms, but merely as hypotheses. All that necessary reasoning can do is to keep an initial hypothesis consistent with itself; it cannot prove any matter of fact. But the religious metaphysicians seek thus either absolutely to hoist themselves by their boot-straps, or at least to very much increase the height of their jump. Starting with no premise except such as every man knows, they seek to make this take the place of the special religious experience upon which Christianity professes to be founded. Since Hegelianism was exploded, the world will not believe that philosophy (that is, so much of science as can be inferred from the common experience of all men) can do the work of the special sciences, each of which is founded on some department of experience, to be undergone only upon the fulfilment of laborious conditions.

The question to which Royce's Supplementary Essay is mainly devoted has an intimate connection with this frequently urged objection to metaphysics. The world of possibilities, in which necessary reasoning holds a solitary sway, is a world of generals. You can no more suppose an individual horse than you can wish for an individual horse. You can suppose a pseudo-individual—for example, a vague individual—just as you can wish for one horse and no more. Yet even this you can do only by the aid of a real experience. The world of existences to which truth relates, and in which necessary reasoning is out of place, is a world of individuals. The question for metaphysics is, therefore, how deep into the nature of things does the distinction between the general and the individual go. Prof. Royce comments upon what Aquinas and Duns Scotus have to say upon this subject, which was the leading topic of logico-metaphysical discussion from the middle of the thirteenth to the middle of the fourteenth century, say during the period of the decorated Gothic architecture. Duns Scotus, one of the ablest logicians that ever lived, was the principal doctor of that period to hold virtually the proposition that metaphysics has nothing decisive to say concerning religious questions, which must be left to religious experience or special information, or concerning special science, which must be left to the appropriate department of experience. "Non potest probari Deum esse vivum." See this and some dozens of similar propositions in his 'Tractatus de Creditis.' But if pure reasoning is thus impotent as to existence, the concrete world cannot be a mere solidification of the world of ideas. In harmony, therefore, with that view of demonstrative reasoning, he held that the principle of individuation was a certain "positing mode of being" (*positiva entitas*). This was not very explicit, but it was important as showing that the individuality was something utterly different from anything else. Throughout the writings of Scotus, not merely in the famous discussion concerning the third distinction of the second book of the 'Sentences,' but wherever the question of individuality is approached (as in the 'Questiones Subtilissimæ') we see its perculiarity insisted upon; yet Prof. Royce has read Scotus through such spectacles that he adduces him as an authority in favor of his own views. But Royce's speculations burningly approach the truth, and become most interesting when he connects individuation

with will. This is an important step for one who has always been an absolute idealist in the Hegelian sense; for the moment that the phenomenon of will, in its strictly individual character, is given its due place in philosophy, though a sort of absolute psychism may survive, a seed of death would seem to be implanted in the Hegelian system. Here is the keynote to this highly important contribution to logico-metaphysical thought:

"We have seen that the completion of the unity of Absolute Consciousness demands the presence of a factor not separate from thought and experience, yet not definable in terms either of bare thought or of the data of immediate experience, in so far as they are merely felt or are present as the merely sensuous fulfilment of thought. This new factor we have defined as will. We have seen that it does not form merely one of the contents of experience to which thought refers, but determines the world which fulfils thought to be this world rather than any of the other of the abstractly possible, but not genuinely possible worlds."

The last words indicate that Prof. Royce is still unwilling to admit an element of blind force in the universe. Nor does he make much of the intrinsically dualistic character of will.

Memorials of William C. Bond, Director of the Harvard College Observatory, and of his son, George P. Bond. By Edward S. Holden. San Francisco: Murdoch; New York: Lemcke & Buechner. 12mo, pp. 291.

Prof. Holden, with the aid of members of the Bond family, by whom most of the material was supplied, has here brought out a little book which will prove interesting to the general reader and important in the history of American science. American astronomy may be said to have come into an independent existence sixty years ago, and Bond was one of its pioneers. Like most born astronomers, he began trying what he could do in astronomical work at an early age. His first instruments were fashioned by himself, and were, of course, of the rudest description. Later, when he owned a small house, a huge granite block to support his transit instrument rose through the centre of the parlor, the ceiling of which was intersected by a meridian opening. In 1838 his well-established reputation led to his being engaged by the Navy Department to make observations for use in connection with the Wilkes exploring expedition to the Southern hemisphere. In the year following he accepted an invitation from President Quincy to connect himself with Harvard College, the only inducement offered being a residence and improved opportunities for his scientific work. The erection of the Harvard Observatory three years later afforded him for the first time facilities of the best class, of which he availed himself to initiate the long series of observations and researches which have raised the establishment to its present rank.

A curious historic circumstance connected with the early history of the Washington Observatory is obscurely alluded to in a footnote by G. P. Bond on page 23. That some project for placing a civilian astronomer in charge of this institution had been urged when it was founded, first came out through a remark in a letter of Maury to a friend, which was not published till after his death:

"You know I did not want the place, and only decided to keep it when I heard it had been promised to a civilian, under the plea that no one in the navy was fit for it. I then went to Mason . . . and told him he must stand by me. He did so, and though I had never seen an instrument of the kind before, and had no one with me who had, I was determined to ask no advice or instruction from the savants, but to let it be out and out a navy work."

It would seem from the note in question that the civilian here alluded to was Bond.

George P. Bond, the son and successor of William, had many of the characteristics of his father, and was more fortunate in having an early mathematical training. He was an industrious though not brilliant observer, and his two or three papers on mathematical astronomy are of high merit—one of them, indeed, may be called classic, as it contained the first development of one of the methods of "special perturbations" still in extensive use. This method was shortly afterwards independently worked out by Encke of Berlin, who, however, publicly acknowledged Bond's priority as soon as his attention was called to Bond's paper. A letter of Encke to Bond apologizing for his ignorance of the latter's work is found on p. 153.

The two men, father and son, were intimately associated with two capital improvements in practical astronomy. One of these is the system of registering the moment of an observation by electricity on a revolving cylinder; the other the application of photography to astronomy. But, although Bond seems to have been almost a pioneer in astronomical photography, the credit of first applying it to the practical purposes of celestial measurement on a large scale must still rest with Rutherfurd. The modest and retiring disposition of the two men was not conducive to public notoriety during their lives; and their work was characterized by patience, persistence, and good judgment rather than by brilliancy.

The Italic Dialects. By R. S. Conway. In two volumes. Cambridge, England: University Press; New York: Macmillan. 1897.

The study of the Italic dialects—meaning by Italic the ancient dialects of Italy, sisters of the Latin—has made remarkable progress within the last five years, and this is due in large degree to the teaching and inspiration of Prof. Brugmann of Leipzig, to whom Prof. Conway has dedicated his stately volumes. For many years Brugmann has made the interpretation of the Umbrian remains a feature of his *Sprachwissenschaftliche Gesellschaft,* and in 1891, when it fell to him to assign the subject for the first prize of the philosophical faculty, a statistical and comparative treatment of the Oscan vowel system was requested. This brought out two treatises, both of which were published in 1892 and contained a number of new discoveries. At about the same time a complete grammar of the Oscan-Umbrian dialects was announced by a Swiss scholar, Von Planta. Von Planta was also a member of Brugmann's Gesellschaft some six years before, and had been encouraged to continue his study of the Italic dialects. But he gave no sign of further activity, and at the time when the subject for the prize essay was assigned, Prof. Brugmann was not aware that he had been quietly but persistently at work along the same line. Still, only good resulted from this apparent glut of products in a field which had long been neglected. Some of the most important new results were vouched for by their discovery by all three authors, and each work had its own special merits.

But another desideratum, a new collection of the material, had not yet been supplied, and it was also in 1892 that the first announcement was made of 'The Italic Dialects,' by R. S. Conway, who had also been a participant in Brugmann's Gesellschaft for a short period. For the Umbrian, to be sure, the material was still practically restricted to the celebrated Iguvinian tables discovered at Gubbio in the fifteenth century, and the text of these is perfectly clear and well reproduced in the photographs published in connection with Bréal's edition. For the other dialects the various publications of the Russian Zvetaieff were in use. But where the reading was doubtful, as was not infrequently the case, the facsimiles of Zvetaieff were felt to be unsatisfactory guides to the establishment of the text. Moreover, a considerable number of new Oscan inscriptions had come to light and been edited in scattered articles.

In Prof. Conway's work which now lies before us we have a complete collection of all the material, inscriptional or otherwise, upon which our knowledge of the Italic dialects rests. The text of nearly all the inscriptions is based upon autopsy, made in the light of previous readings and conjectures. It may be mentioned here that the second volume of Von Planta's grammar, which appeared at the beginning of the year, is supplemented by a new collection of the inscriptions. These texts are also based upon autopsy, in some cases double, the author having made two trips to Italy for the purpose. But Von Planta's collection has not made Conway's book any the less welcome. Aside from the superior advantage of two pairs of eyes and two heads over one, the two collections are different in scope. That of Von Planta is a compact series of texts furnished as a supplement to a very comprehensive and complete grammar of the dialects. With Conway, the presentation of the material is the main object, this being supplemented by a brief outline of the grammar. His work is epigraphical rather than grammatical. The customary epigraphical data, such as size, provenance, form of alphabet, etc., are given with the greatest fulness, combined with other pertinent archæological observations; witness the elaborate discussion of the somewhat mysterious *iovilae* dedications from Old Capua, or the minute measurements of the *mensa ponderaria* of Pompeii. Clearly no pains have been spared to make the external evidence absolutely complete, and in this lies one of the chief merits of the book. The new collation of the inscriptions has naturally produced a number of minor changes in the texts, but it cannot be said that there are many startling results. Scarcely any new words have been brought to light and few old friends have disappeared, though Von Planta has decided that the oft-quoted *úiniversím* of a Capuan inscription must be given up. A discovery made by both Conway and Von Planta in regard to a short inscription running around the neck of a small column (Conway No. 176) has yielded a neat result.

In addition to the inscriptions, including coin legends, our author has given us the

dialect glosses, and also lists of the geographical and personal names belonging to the different parts of ancient Italy, supplemented by such modern names of places as might possibly be of ancient origin. All this material is carefully assorted. Glosses which can be assigned with certainty are distinguished from those of more doubtful provenance. The lists of personal names are classified according to frequency, and other distinctions are made apparent by various typographical devices. Collections of Italic glosses have been made before, but in the classified name-lists we have a body of material now first made accessible. Its value, indeed, is only subsidiary, but scholars may well be thankful to the author for the stupendous labor which has made it available for what it is worth.

The arrangement of the book is geographical. Brief introductions to the various sections furnish concise historical data pertaining to the several tribes or to the individual towns. The author rightly feels that the records of the different tribes are not to be regarded merely as so much linguistic material for comparative philologists, much as these have done for the better understanding of them, but as important (for some periods and some regions almost the only) monuments of tribal history and civilization. How many who read in their Livy of Oscan-speaking spies sent into the Samnite camp realize that the language of the people that gave Rome her hardest battle for supremacy in Italy is not entirely unknown to us?

The classification of the dialects is unusual in two points, one being only a matter of nomenclature, the other involving a more serious question. The inscriptions of the Paeligni, Marrucini, and Vestini are classed as North Oscan instead of Sabellian, the ordinary designation. It is certainly well to emphasize the close relationship of these dialects, especially the Paelignian, of which we know most, with the Oscan. Strictly speaking, the Samnites are Sabellians, and their language, the Oscan, a Sabellian dialect or set of dialects. But the course of history has won an independent position for both people and language, and it is questionable if it is not better to adhere to the classical use of Oscan. The other departure from orthodoxy consists in ranging the dialects of the Marsi, Aequi, and Sabini under the Latin-Faliscan, or, to adopt the author's more convenient title, the Latinian group. Professor Conway has on another occasion intimated his belief that these dialects did not belong to the Oscan-Umbrian group, and one is disappointed not to find a fuller discussion of the matter here. It is true that the scanty material we have shows no marked Oscan-Umbrian characteristics; but, in view of the fact that these dialects were among the very first to fall under Latin influence, this evidence is hardly adequate. It will certainly appear to many that the traditional connection of these tribes with the Sabellian group should be allowed some weight until more and older material is at hand to establish the true character of the dialects.

Part ii., printed in a separate volume, contains a brief outline of the grammar of the dialects, followed by full indices of the local and gentile names and a glossary of the dialects. If one might be permitted to wish for more where so much has been given, it would be in the direction of another appendix similar to that in Robert's 'Greek Epigraphy,' with commentaries on some of the longer inscriptions. To be sure, the glossary indicates the author's interpretation of individual words and occasionally of phrases, but any one who has struggled with the divergent views on many difficult passages would gladly learn what conclusion the author himself has reached, even where he would simply confirm one's own *non liquet*.

The mechanical execution of the book is everything that could be desired, and all scholars should subscribe to the thanks rendered in the preface to the Syndics of the Cambridge University Press for their liberality. 'The Italic Dialects' is not only an indispensable piece of apparatus to the linguistic student, but of the highest value to every historian and classicist whose interest in ancient Italy is not confined to Rome. As stated above, the collection of material which Professor Conway offers us is incomplete. Let us hope that it will not long remain so. It does not seem likely that the soil of Umbria will yield much, but Oscan inscriptions are turning up nearly every year, either from the excavations at Pompeii or Capua, or as the result of some accidental find in Samnium. Systematic excavations, if made possible, would unquestionably meet with considerable success, and their importance can be realized only when we remember that Oscan is the Gothic of the Italic dialects. An Oscan inscription of fair extent may do more for the solution of problems of historical Latin grammar than years of work in the study.

BOOKS OF THE WEEK.

Audubon, Maria R. Audubon and His Journals. 2 vols. Scribners. $7.50.
Babyhood. Vol. XIII. December, 1896—November, 1897. Babyhood Publishing Co.

Not for Children Only.

JUST PUBLISHED.

A BOOK OF VERSES FOR CHILDREN.

Compiled by Edward V. Lucas. With covers and frontispiece in colors. 12mo, $2.00.

While primarily intended for the young, it will please older readers, too. Among the poets represented are Browning, Burns, Coleridge, Marjorie Fleming, the Howitts, Longfellow, J. W. Riley, Scott, Shakespeare, Stevenson, Ann and Jane Taylor, Elizabeth Turner, etc. Some of the quaint conceits of "Lewis Carroll," "Anstey," and Lear are also included.

HENRY HOLT & CO.,

29 W. 23D ST., NEW YORK.

HATCHARDS.

This is the favorite BOOKSTORE, and for 100 years the resort of the smartest people in London. It is visited and patronized by all who love books. London is the great market for books, and all the best as well as the cheapest editions can be had by writing here. Special collections formed, and fuller information supplied than from any other house. Books, both old and new, and relating to any subject, can readily be supplied, at very moderate prices.

Agents for Clubs, Libraries, and all private collectors.

187 Piccadilly, London, W.

YALE MIXTURE.

The choicest tobacco made, and preëminently a gentleman's smoke.

Marburg Bros., The American Tobacco Co., Successor, Baltimore, Md.
